The conventional way of allocating across asset classes fails to account for the overlapping risks they represent. Factor risks are the hard times that affect all assets, and investors are rewarded for weathering losses during bad times with long-run risk premiums. Optimally harvesting factor risk premiums—on our own or by hiring others—requires identifying our particular set of bad times, and exploiting the difference between them and those of the average investor.

McCarthy, 2019-11-21 The Routledge Handbook of Henri Lefebvre, The City and Urban Society is the first edited book to focus on Lefebvre's urban theories and ideas from a global perspective, making use of recent theoretical and empirical developments, with contributions from eminent as well as emergent global scholars. The book provides

international comparison of Lefebvrian research and theoretical conjecture and aims; to engage with and critique Lefebvre's ideas in the context of contemporary urban, social and environmental upheavals; to use Lefebvre's spatial triad as a research tool as well as a point of departure for the adoption of ideas such as differential space; to reassess Lefebvre's ideas in relation to nature and global environmental sustainability; and to highlight how a Lefebvrian approach might assist in mobilising resistance to the excesses of globalised neoliberal urbanism. The volume draws inspiration from Lefebvre's key texts (*The Production of Space*; *Critique of Everyday Life*; and *The Urban Revolution*) and includes a comprehensive introduction and concluding chapter by the editors. The conclusions highlight implications in relation to increasing spatial inequalities; increasing diversity of needs including those of migrants; more authoritarian approaches; and asymmetries of access to urban space. Above all, the book illustrates the continuing relevance of Lefebvre's ideas for contemporary urban issues and shows - via global case studies - how resistance to spatial domination by powerful interests might be achieved. The Handbook helps the reader navigate the complex terrain of spatial research inspired by Lefebvre. In particular the Handbook focuses on: the series of struggles globally for the 'right to the city' and the collision of debates around the urban age, 'cityism' and planetary urbanisation. It will be a guide for graduate and advanced undergraduate teaching, and a key reference for academics in the fields of Human Geography, Sociology, Political Science, Applied Philosophy, Planning, Urban Theory and Urban Studies. Practitioners and activists in the field will also find the book of relevance.
