ati grading scale

Understanding the ATI Grading Scale: A Comprehensive Guide

ATI grading scale is a crucial component for students pursuing nursing and healthcare education through ATI (Assessment Technologies Institute) assessments. It provides a standardized way to evaluate student performance, track progress, and prepare for licensing exams such as the NCLEX. Whether you are a nursing student, educator, or academic advisor, understanding the ATI grading scale is essential for effective study strategies and academic planning.

In this article, we will explore the details of the ATI grading scale, how it is structured, what the scores mean, and tips for interpreting your results to maximize your success.

What is the ATI Grading Scale?

ATI grading scale is a scoring system developed by ATI to assess students' knowledge and readiness for licensure exams. It is used across various ATI assessments, including practice tests, proctored exams, and comprehensive assessments like the ATI Predictor exams. The scale translates raw scores into a standardized format that helps students and educators understand performance levels.

The primary purpose of the ATI grading scale is to:

- Quantify student performance objectively
- Identify areas of strength and weakness
- Guide targeted remediation and study plans
- Predict success on licensing exams (e.g., NCLEX)

Structure of the ATI Grading Scale

The ATI grading scale is typically divided into categories or levels, each representing a range of scores that correspond to different performance tiers. While specific score ranges might vary slightly depending on the assessment, the general structure includes the following components:

Score Ranges and Performance Categories

Most ATI assessments use a scaled score system ranging from 0 to 100 or 0 to 100%, with corresponding performance categories such as:

- Below Basic / Below Standard: Indicates significant gaps in knowledge
- Basic / Approaching Standard: Shows developing understanding but still needs improvement
- Proficient / Meets Standard: Demonstrates acceptable mastery of content
- Advanced / Exceeds Standard: Reflects a high level of competence and understanding

Some assessments may further categorize performance into more specific levels, such as:

1. Below Standard (0-74%)
2. Standard (75-89%)
3. Above Standard (90-100%)

Understanding the Score Conversions

ATI assessments often provide scaled scores, percentile ranks, and performance levels:

- Scaled Scores: Converted raw scores that account for test difficulty variations
- Percentile Ranks: Indicate how your performance compares to other test-takers
- Performance Levels: Categorize your mastery level

For example, a scaled score of 90% might correspond to a "Proficient" level, while 80% might be "Approaching Standard."

Interpreting ATI Scores for Academic Success

Knowing what your ATI score signifies is vital for planning your next steps. Here’s how to interpret different score ranges:

Scores Below 75%

- Usually indicates significant gaps in understanding
- Requires targeted remediation
- Focus on reviewing weak areas before retaking assessments

Scores Between 75% and 89%

- Represents acceptable or nearing mastery
- Suggests readiness for progression, but further review can boost confidence
- Use these scores to identify specific content areas for review

Scores of 90% and Above

- Demonstrates strong mastery of content
- Indicates readiness for the NCLEX and professional practice
- Maintain current study strategies and continue practicing to sustain high performance

Using the ATI Grading Scale to Prepare for the NCLEX

The ultimate goal for nursing students is passing the NCLEX exam. ATI assessments are designed to predict NCLEX success by providing performance indicators aligned with licensure exam standards.

ATI Predictor Exam and the Grading Scale

The ATI Predictor exam is a comprehensive assessment that estimates your likelihood of passing the NCLEX. The scoring system on this test helps students identify their readiness level:

- Green Zone (High likelihood of passing): Scores above 95%
- Yellow Zone (Moderate likelihood): Scores between 85-94%
- Red Zone (Low likelihood): Scores below 85%

Achieving a score in the green zone suggests that the student is well-prepared for the NCLEX.

Strategies to Improve Your ATI Scores

To optimize your scores and ensure success:

- Regularly review ATI study materials and practice questions
- Focus on areas where your scores are lowest
- Use ATI remediation resources to strengthen weak content areas
- Take advantage of ATI practice exams to simulate test conditions
- Track your progress over time to identify trends and improvements

Tips for Educators and Academic Advisors

Understanding the ATI grading scale allows educators and advisors to better support students:

- Use scores to tailor individualized study plans
- Identify students at risk of poor NCLEX performance
- Provide targeted interventions and resources
- Monitor progress throughout the nursing program

Common FAQs About the ATI Grading Scale

What is considered a passing score on ATI assessments?

- Passing scores vary by program and assessment, but generally, scores of 75% or higher are considered acceptable.
- For predictor exams, scores in the green zone (above 95%) are ideal.

Can ATI scores be used as a final grade?

- Typically, ATI scores are formative assessments used for preparation and remediation rather than final grades.
- However, some programs incorporate ATI performance into their grading policies.

How often should students take ATI assessments?

- Regular assessment is recommended to monitor progress.
- Many programs schedule assessments at key points in the curriculum, such as after completing major content areas or before NCLEX review.

Conclusion

Understanding the **ATI grading scale** is essential for nursing students aiming to excel in their coursework and pass the NCLEX on the first attempt. By interpreting scores correctly and leveraging assessment results, students can identify strengths, address weaknesses, and develop effective study strategies. Educators and advisors can also use ATI scores to support student

success through targeted interventions. Remember, consistent effort, strategic review, and a clear understanding of your performance levels are key to achieving your nursing career goals.

Whether you are just beginning your nursing journey or preparing for licensure, mastering the ATI grading scale will empower you to measure your progress accurately and stay motivated on your path to becoming a licensed nurse.

Frequently Asked Questions

What is the ATI grading scale used for?

The ATI grading scale is used to evaluate student performance on ATI assessments, providing a standardized way to interpret scores and determine proficiency levels in various nursing courses.

How is the ATI grading scale structured?

The ATI grading scale typically categorizes scores into ranges such as Below Basic, Basic, Proficient, and Advanced, helping educators identify students' mastery levels of the material.

What score range corresponds to a 'Proficient' level on the ATI grading scale?

Generally, a score between 75% and 89% is considered 'Proficient' on the ATI grading scale, indicating satisfactory understanding of the content.

How can students improve their ATI grades based on the grading scale?

Students can improve their ATI grades by reviewing areas where they scored lower, utilizing ATI resources, practicing additional questions, and seeking help from instructors or tutors.

Is the ATI grading scale the same across all nursing programs?

While the general structure of the ATI grading scale is similar, specific score ranges and categorizations may vary slightly depending on the nursing program or institution.

What is considered a passing score on the ATI

grading scale?

Typically, a score of 75% or higher is considered passing on the ATI grading scale, though this may vary by program or course requirements.

How does the ATI grading scale help in NCLEX preparedness?

The ATI grading scale helps identify students' readiness for the NCLEX exam by highlighting areas of strength and weakness, guiding targeted review and practice.

Can the ATI grading scale be used for certification or licensure decisions?

Yes, some nursing programs and licensing boards use ATI scores and grading scales as part of their criteria to determine eligibility for certification or licensing exams.

What should students do if they score below 'Basic' on the ATI grading scale?

Students should review their weak areas, utilize additional ATI resources, seek support from instructors, and possibly retake assessments to improve their scores.

Where can I find the official ATI grading scale for my course?

The official ATI grading scale for your course can typically be found in your course syllabus, ATI student portal, or by consulting your instructor or program coordinator.

Additional Resources

ATI Grading Scale: An In-Depth Analysis of Its Structure, Application, and Impact on Nursing Education

In the domain of nursing education, assessment and grading systems serve as critical tools to measure student competence, knowledge acquisition, and readiness to enter the healthcare workforce. Among these systems, the ATI (Assessment Technologies Institute) grading scale has garnered significant attention for its unique approach to evaluating nursing students' performance. This comprehensive analysis aims to dissect the ATI grading scale, exploring its origins, structure, application, advantages, limitations, and implications for nursing education.

Understanding the ATI Grading Scale: Origins and Purpose

The Genesis of ATI and Its Role in Nursing Education

Assessment Technologies Institute (ATI) was established with the goal of enhancing nursing education through standardized testing, competency assessments, and curriculum support. As a prominent provider of NCLEX preparation tools, practice assessments, and skill modules, ATI has developed its grading scale to provide a consistent framework for evaluating student performance across various nursing programs.

The ATI grading scale is designed not only to measure knowledge but also to predict students' likelihood of passing licensing exams like the NCLEX-RN. Its purpose extends to identifying students who require additional support, guiding curriculum adjustments, and ensuring that nursing graduates meet the required competency standards.

Why the ATI Grading Scale Matters

- Standardization: It offers a uniform criterion for evaluating student progress across different institutions.
- Predictive Validity: Its scores correlate with NCLEX success, thus serving as an early indicator.
- Remediation Tool: It helps educators identify at-risk students and tailor interventions.
- Benchmarking: Facilitates comparisons of student performance across cohorts and programs.

Structure of the ATI Grading Scale

Scoring Components and Their Significance

The ATI grading scale employs a composite scoring system derived from various assessments, including practice tests, comprehensive examinations, and skill evaluations. The scores are typically expressed as percentages or scaled scores, which are then categorized into performance levels.

Key elements include:

- Percentile Scores: Reflecting the percentage of questions answered

correctly.
- Scaled Scores: Standardized scores that account for test difficulty variations.
- Performance Levels: Classifications such as "Below Proficiency," "Proficient," and "Advanced."

Performance Level Breakdown

The ATI grading scale often segments student scores into tiers:

1. Below Basic: Indicates significant gaps in knowledge; immediate remediation required.
2. Proficient: Demonstrates acceptable competency; standard progress.
3. Advanced: Surpasses expectations; indicates strong mastery.
4. Benchmark Pass Point: A predetermined score (commonly around 78% or higher) associated with a high likelihood of NCLEX success.

Scoring Benchmarks and Their Interpretations

Score Range	Performance Level	Implication
0-77%	Below Proficiency	High risk of NCLEX failure; urgent intervention needed
78-85%	Proficient	Satisfactory; on track for success
86-100%	Advanced	Excellent performance; mastery demonstrated

Note: The exact cutoffs may vary between institutions or assessment periods, but the general benchmarks provide a consistent framework.

Application of the ATI Grading Scale in Nursing Education

Assessment Administration and Scoring

Nursing programs utilize ATI assessments at various points in the curriculum, including:

- Formative Assessments: Ongoing quizzes and practice tests for learning reinforcement.
- Summative Assessments: Comprehensive exams that evaluate overall competency.
- Remediation and Progress Tracking: Scores inform decisions on additional

instruction or support.

Scoring is automated and standardized, providing immediate feedback to students and educators.

Influence on Curriculum and Instruction

- Curriculum Alignment: Results guide curriculum adjustments to address common knowledge gaps.
- Student Remediation: Those scoring below benchmark receive targeted interventions.
- Progress Monitoring: Repeated assessments track improvement over time.

Predictive Value for NCLEX Success

Research indicates that students scoring above the ATI benchmark are more likely to pass the NCLEX on their first attempt. Consequently, programs emphasize reaching or exceeding these scores as a graduation requirement.

Advantages of the ATI Grading Scale

- Consistency Across Programs: Facilitates uniform evaluation standards.
- Early Identification: Detects at-risk students early, allowing timely remediation.
- Data-Driven Decision Making: Enables educators to make informed curricular adjustments.
- Enhanced NCLEX Preparation: Scores correlate with licensing exam success, increasing confidence in graduate preparedness.
- Motivational Tool: Clear benchmarks promote goal-setting among students.

Limitations and Criticisms of the ATI Grading Scale

Despite its widespread adoption, the ATI grading scale faces several criticisms:

Over-Reliance on Standardized Testing

- Limited Scope: Focuses heavily on cognitive knowledge, potentially neglecting clinical reasoning, hands-on skills, and soft skills.

- Test Anxiety: High-stakes testing can induce anxiety, impacting performance and not accurately reflecting competence.

Potential for Score Inflation or Deflation

- Variability in test difficulty or student test-taking skills can skew results.
- Some argue that scores may not fully capture a student’s real-world readiness.

Inconsistent Benchmarks

- Different institutions may set varied benchmarks, complicating comparisons.
- Not all programs may adhere strictly to ATI’s recommended cutoffs.

Limited Cultural and Educational Diversity Consideration

- Standardized assessments may not account for diverse educational backgrounds, language barriers, or cultural differences affecting performance.

Implications for Nursing Education and Future Directions

Integrating the ATI Grading Scale with Broader Competency Frameworks

As nursing education shifts toward competency-based models, reliance solely on the ATI grading scale may be insufficient. Combining it with:

- Clinical performance evaluations
- Simulation assessments
- Soft skills appraisal

can provide a more holistic picture of student readiness.

Enhancing Validity and Fairness

- Periodic review of scoring benchmarks to align with evolving standards.
- Incorporation of diverse assessment modalities.
- Cultural sensitivity training for educators to interpret scores equitably.

Research and Continuous Improvement

Further research is necessary to:

- Validate the predictive accuracy of ATI scores across diverse populations.
- Explore the impact of remediation strategies on improving scores.
- Develop adaptive testing models that better reflect individual student abilities.

Conclusion

The ATI grading scale remains a pivotal component in nursing education assessment, offering standardized benchmarks that help guide instruction, remediation, and licensure preparedness. While it provides valuable insights and predictive capabilities, it is essential for educators and institutions to recognize its limitations and complement it with a comprehensive evaluation approach. As the landscape of nursing education continues to evolve, the ATI grading scale must be continuously refined to ensure it promotes equitable, accurate, and meaningful assessment of future healthcare professionals.

Understanding its structure and application enables stakeholders to leverage the ATI grading scale effectively, ensuring that nursing graduates are not only academically proficient but also clinically competent and ready to meet the demands of modern healthcare environments.

ati grading scale: Technical Paper - Army Research Institute for the Behavioral and Social Sciences , 1978

ati grading scale: HCI for Cybersecurity, Privacy and Trust Abbas Moallem, 2024-05-31 This proceedings, HCI-CPT 2024, constitutes the refereed proceedings of the 6th International Conference on Cybersecurity, Privacy and Trust, held as Part of the 26th International Conference, HCI International 2024, which took place from June 29 - July 4, 2024 in Washington DC, USA. Two volumes of the HCII 2024 proceedings are dedicated to this year's edition of the HCI-CPT Conference. The first focuses on topics related to Cyber Hygiene, User Behavior and Security Awareness, and User Privacy and Security Acceptance. The second focuses on topics related to

Cybersecurity Education and Training, and Threat Assessment and Protection.

ati grading scale: *Human-Computer Interaction* Masaaki Kurosu, Ayako Hashizume, 2025-05-31 This seven-volume set constitutes the refereed proceedings of the Human Computer Interaction thematic area of the 27th International Conference on Human-Computer Interaction, HCII 2025, held in Gothenburg, Sweden, during June 22–27, 2025. The HCI Thematic Area constitutes a forum for scientific research and addressing challenging and innovative topics in Human-Computer Interaction theory, methodology and practice, including, for example, novel theoretical approaches to interaction, novel user interface concepts and technologies, novel interaction devices, UI development methods, environments and tools, multimodal user interfaces, emotions in HCI, aesthetic issues, HCI and children, evaluation methods and tools, and many others.

ati grading scale: Extended Reality Lucio Tommaso De Paolis, Pasquale Arpaia, Marco Sacco, 2025-08-28 The seven-volume set LNCS 15737-15743 constitutes the proceedings of the International Conference on Extended Reality, XR Salento 2025, held in Otranto, Italy, during June 17-20, 2025. The 128 full papers presented together with 65 short papers were carefully reviewed and selected from 256 submissions. The papers are organized in the following topical sections: Part I: Virtual Reality; and Augmented and Mixed Reality. Part II: Extended Reality; and Extended Reality in Education and Learning. Part III: Transforming Research and Clinical Interventions with eXtended Reality. Part IV: Digital Twin: Innovative Approaches in Industry and Healthcare. Part V: eXtended Reality for Cultural Tourism Sustainability; eXtended Reality for Art, Design, and Entertainment; and Digital Twin and Smart Virtual Representations for Cultural Heritage. Part VI: Crafting Virtual Humans for Immersive XR Applications; and eXtended Reality for Serious Games. Part VII: Artificial Intelligence; Integrating Artificial Intelligence, Computer Vision and Augmented Reality in Computer-Assisted Intervention; and AI-Driven XR Innovations in Healthcare: Bridging Technology and Ethics.

ati grading scale: *Electronic Government* Ida Lindgren, Manuel Pedro Rodríguez Bolívar, Marijn Janssen, Euripidis Loukis, Francesco Mureddu, Panos Panagiotopoulos, Gabriela Viale Pereira, Efthimios Tambouris, 2025-08-19 This LNCS conference set constitutes the proceedings of the 24th IFIP WG 8.5 International Conference on Electronic Government, EGOV 2025, in Krems, Austria, held during August 31–September 4, 2025. The 25 full papers presented were carefully selected from 116 submissions. They were categorized under the topical sections as follows: E-Government and E-Governance; Emerging Issues and Innovations; Open Data; Smart Cities; AI, Data Analytics and Automated Decision-Making.

ati grading scale: *The Power of Global Performance Indicators* Judith G. Kelley, Beth A. Simmons, 2020-03-19 Shows how global ratings and rankings shape political agendas and influence states' behavior, reframing how we think about power.

ati grading scale: Attitude Towards Information N. G Satish, 1994

ati grading scale: Enteral Nutrition Bradley C. Borlase, 1994 Provides the scientific rationale for feeding patients by tube and describes what can be accomplished with a sound, practical approach to the delivery, monitoring, and management of enteral nutrition. Written for health care practitioners.

ati grading scale: Stormwater Runoff and Receiving Systems Edwin Herricks, 1995-07-25 The primary focus of stormwater and urban runoff research during the past twenty-five years has been on the physical description and the chemical quality assessment of runoff events and the design and implementation of the best management practices to control these events. There is a definite need for more effective integration of receiving system issues in the management and regulation of stormwater runoff. This book successfully brings together a diverse group of environmental specialists to address the issues surrounding the assessment, management, and control of stormwater, and more specifically urban runoff, from a receiving system perspective. The book's emphasis on the receiving system is timely, coming during a period when the U.S. Environmental Protection Agency is placing increasing emphasis on wet weather conditions through a new permit program for stormwater runoff and a policy on combined sewer overflows. Stormwater Runoff and

Receiving Systems covers biocriteria, assessment of receiving water integrity, and integrated watershed analysis-all aspects of current water quality management programs for both industrial and municipal areas. More than thirty chapters are divided into six sections, offering in-depth discussions on various issues relating to stormwater, urban runoff, and receiving systems; impacts; uncertainty and risk; study design; impact mitigation; and issues analysis. Anyone who deals with regulatory programs requiring stormwater effect assessment including more than sampling and analysis of chemical water quality parameters in effluents will find this reference particularly useful.

ati grading scale: *Human Aspects of IT for the Aged Population. Design for the Elderly and Technology Acceptance* Jia Zhou, Gavriel Salvendy, 2019-07-10 This two-volume set LNCS 11592 and 11593 constitutes the refereed proceedings of the 5th International Conference on Human Aspects of IT for the Aged Population, ITAP 2019, held in July 2019 as part of HCI International 2019 in Orlando, FL, USA. HCII 2019 received a total of 5029 submissions, of which 1275 papers and 209 posters were accepted for publication after a careful reviewing process. The 86 papers presented in these two volumes are organized in topical sections named: Design with and for the Elderly, Aging and Technology Acceptance, Aging and the User Experience, Elderly-Specific Web Design, Aging and Social Media, Games and Exergames for the Elderly, Ambient Assisted Living, Aging, Motion, Cognition, Emotion and Learning.

ati grading scale: *Digital Human Modeling and Applications in Health, Safety, Ergonomics and Risk Management. Health, Operations Management, and Design* Vincent G. Duffy, 2022-06-16 This two-volume set LNCS 1319 and 13320 constitutes the thoroughly refereed proceedings of the 13th International Conference on Digital Human Modeling and Applications in Health, Safety, Ergonomics and Risk Management, DHM 2022, which was held virtually as part of the 24rd HCI International Conference, HCII 2022, in June/July 2022. The total of 1271 papers and 275 poster papers included in the 39 HCII 2022 proceedings volumes was carefully reviewed and selected from 5487 submissions. DHM 2022 includes a total of 56 papers. The first volume focuses on topics related to ergonomic design, anthropometry, and human modeling, as well as collaboration, communication, and human behavior. The second volume focuses on topics related to task analysis, quality and safety in healthcare, as well as occupational health and operations management, and Digital Human Modeling in interactive product and service design.

ati grading scale: *Knowledge Management in Organizations* Lorna Uden, I-Hsien Ting, Kai Wang, 2021-07-17 This book contains the refereed proceedings of the 15th International Conference on Knowledge Management in Organizations, KMO 2021, held in Kaohsiung, Taiwan, in July 2021. The 28 full papers and 9 short papers accepted for KMO 2021 were selected from 86 submissions and are organized in topical sections on: knowledge management models and analysis; knowledge transfer and learning; knowledge and service innovation; knowledge and organization; information systems and information science; privacy and security; intelligent science and data mining; AI and new trends in IT.

ati grading scale: Aeromedical Evacuation William W. Hurd, William Beninati, 2019-07-04 Now in its fully revised and expanded second edition, this volume is the definitive resource on long-distance air transport of injured patients in both peacetime and wartime. It discusses the history of aeromedical evacuation, triage and staging of the injured patient, evacuation from site of injury to medical facility, air-frame capabilities, medical capabilities in- flight, response to in-flight emergencies, and mass emergency evacuation. Specific medical conditions are addressed in detail in the second half of the book, including general surgical casualties such as abdominal wounds and soft tissue injuries, vascular injuries, maxillofacial injuries, head and spinal cord injuries, ophthalmologic casualties, orthopedic casualties, burns, pediatric casualties, obstetric-gynecologic casualties, and more. For each medical condition, important topics are addressed such as conditions needed to be met before transportation, special concerns, supplies and needs of the specific patients and possible in-flight emergencies and their appropriated treatment. Containing several new chapters and featuring extensively updated contributions from experts in the field, Aeromedical Evacuation: Management of the Acute and Stabilized Patient, Second Edition is a must-have reference for a whole new generation of military flight surgeons and flight nurses responsible for aeromedical evacuation of casualties as well as civilian physicians and nurses involved in air transport of ill and post-operative patients.

ati grading scale: Proceedings of the 9th International Performance Analysis Workshop and Conference & 5th IACSS Conference Arnold Baca, Juliana Exel, Martin Lames, Nic James, Nimai Parmar, 2022-04-09 This covers the PACSS 2021 which approached interdisciplinary collaboration between theoretical computer science and practical performance analysis though an online workshop and conference. Readers find in this book the peer-reviewed and discussed evidences on how computer scientists and performance analysts can and have worked together to solve both applied and research-based problems in elite sport, using the methods of computer science. In this edition, we organize the content according to four major topics: machine learning, text mining, best practice and interdisciplinary collaboration. This is a refined material written by leading experts with up-to-date overview of research in the multidisciplinary field of computer science and elite sport performance analysis.

ati grading scale: *River Quality* David A. Dunnette, Antonius Laenen, 2018-05-04 What is involved in restoring a river? River Quality: Dynamics and Restoration answers this question through a series of articles and case studies written by some of the field's leading researchers and practitioners. The first part of the book covers the physical, chemical, and biological dynamics of a river system. The second part describes monitoring programs and remedial measures used to

restore river systems back to healthy and functional states. The Willamette River in Oregon and the Vistula River in Poland are used to illustrate the dynamic and restoration processes. Each river is in a different stage of restoration and is subjected to different degrees of stress from agriculture, industry, and urbanization. The Willamette is an internationally cited example of a restored river, while the Vistula is a river that has just recently begun the restoration process. Contrasts and comparisons of the two river systems enable readers to learn the limitations of restoration processes and what is involved in the different stages of restoration.

ati grading scale: *The Utility of the Racial Attitudes and Perceptions Survey (RAPS) for Assessing Impact of Race Relations Training Programs in the Military* , 1978

ati grading scale: Design, User Experience, and Usability. Interaction Design Aaron Marcus, Elizabeth Rosenzweig, 2020-07-10 This book constitutes the refereed proceedings of the 9th International Conference on Design, User Experience, and Usability, DUXU 2020, held as part of the 22nd International Conference on Human-Computer Interaction, HCII 2020, in Copenhagen, Denmark, in July 2020. The conference was held virtually due to the COVID-19 pandemic. From a total of 6326 submissions, a total of 1439 papers and 238 posters has been accepted for publication in the HCII 2020 proceedings. The 40 papers included in this volume were organized in topical sections on UX design methods, tools and guidelines, interaction design and information visualization, and emotional design.

ati grading scale: Surgical Research Wiley W. Souba, Douglas W. Wilmore, 2001-02-23 With the recent changes in the health care industry, surgeons face increasing pressure to devote their time to their clinical activities, thus limiting their research efforts. It is essential that young and creative individuals are encouraged to perform research and are given incentives to participate in research under the mentorship of more experienced research investigators.Surgical Research is the first book to include all the information necessary for the surgical scientist to perform a research experiment. The editors have assembled outstanding, expert investigators in multiple surgical fields and asked them to describe how they achieve their research accomplishments. In Surgical Research, these experts in the field have outlined everything involved in preparing and conducting a research project. Some of the topics covered in the book include how to state a research question, how to review the available information, how to write research protocol, how to obtain grant money for the experiment, how to analyze the data, and how to present the findings. Also discussed are the ethics of animal and human experimentation along with the history and philosophy of surgical research.To continue to advance technologies and surgical methods, research must continually be performed. Potentially great discoveries are being missed because would-be researchers do not know where to start or how to conduct research, and therefore do not even try. This book provides prospective researchers with all the basic steps needed to perform a research experiment in the surgical field. No student, resident, or fellow should start a research project without this book and no senior surgical scientist should be without it occupying a prominent position in the library.Key Features* The first complete compendium detailing the process and procedures to perform surgical research* Provides details on and compares various methodologies* A must have resource for the surgical resident, fellow, or scientist* Includes a listing of resources and web sites to help the researcher even further

ati grading scale: *Assessment for Learning* Stephen Chappuis, 2004 Helps administrators gain a clear vision of what excellence in assessment looks like and what it takes to achieve that vision.
