indiana university plagiarism test: Educational Technology and Narrative Brad Hokanson, Gregory Clinton, Karen Kaminski, 2017-12-09 This volume is the result of a 2016 research symposium sponsored by the Association for Educational Communications and Technology (AECT) focused on the growing theoretical areas of integrating story and narrative into educational design. Narrative, or storytelling, is often used as a means for understanding, conveying, and remembering the events of our lives. Our lives become a series of stories as we use narrative to structure our thinking; stories that teach, train, socialize, and create value. The contributions in this volume examine stories and narrative in instructional design and offer a diverse exploration of instructional design and learning environments. Among the topics discussed: The narrative imperative: creating a story telling culture in the classroom. Narrative qualities of design argumentation. Scenario-based workplace training as storytelling. Designing for adult learners' metacognitive development & narrative identity. Using activity theory in designing science inquiry games . Changing the narrative of school: toward a neurocognitive redefinition of learning. Educational Technology and Narrative is an invaluable resource offering application-ready ideas to students of instructional design, instructional design practitioners, and teachers seeking to utilize theories of story and narrative to the ways that they convey and express ideas of instructional design and educational technology.

indiana university plagiarism test: *Preparing for College and University Teaching* Joanna Gilmore, Molly Hatcher, 2023-07-03 This book is a guide for designing professional development programs for graduate students. The teaching competencies framework presented here can serve as the intended curriculum for such programs. The book will also be an excellent resource for evaluating programs, and will be an excellent resource for academics who study graduate students. This book presents the work of the Graduate Teaching Competencies Consortium to identify, organize, and clarify the competencies that graduate students need to teach effectively when they join the professoriate. To achieve this goal, the Consortium developed a framework of 10 teaching competencies organized around three overarching questions: • What do graduate students need to achieve by the end of their graduate education to be successful teacher-scholars? • What do graduate students need to understand about higher education to have successful careers as educators? • What do graduate students need to do to be successful teachers during their graduate student careers? Although much work has been done to identify the competencies of effective teachers in higher education, only a small portion of this work has been conducted with graduate student instructors. This is an important area of research given that graduate students are critical in the higher education academic pipeline. Nationally, graduate students teach between 25% and 50% of courses offered at the undergraduate level. Graduate student teaching is also critical because during early teaching experiences teachers establish a teaching style and set of teaching skills, which will endure as graduate students enter the professoriate. It is important to develop a teaching competency framework that is specific to graduate student instructors as they often have unique needs and roles as teachers. For example, graduate student instructors are in the unique position of becoming experts in their field concurrent with learning to teach. Moreover, as many professional development programs for graduate student instructors evolve based upon factors such as available resources and perceived needs of graduate students, this framework will be a useful aid for thoughtfully designing strategic, evidence-based, comprehensive professional development opportunities and programs.

indiana university plagiarism test: Piece to Text on the Monument and One: Letters with the International Body Managers Kiyoun Kim, 2018-08-17 The aims of this book is clear and straightforward. It was motivated to convert an inhumane or insipid experience with the various sources of global ranking into the kind of humanly and cultural experience within our daily lifestyle. Their outlook from presentation is masked with the number purely and perhaps through a myriad of complicated data or ranking information. The concept or self-identification within the experience or exposure would be less substantial or hard to get palpable. My attempt to improve this aspect of contemporary practice certainly will fall short, but you can sense in some paragraphs or titles. I wrote this small piece of book in the end to take care of human integrity and stories for advancing the inherence and liveliness of interested actors or consumers despite all the wind-heads from the turf of existing ranking sources.
