patricia benner from novice to expert pdf: Educating Nurses Patricia Benner, Molly Sutphen, Victoria Leonard, Lisa Day, 2009-10-30 The authors outline a clear vision of what nursing education can and should be and provide practical exemplars of how we can achieve this vision. This is a call for us to work together as guardians of the discipline to assure that future nurses enter the health care system ready and able to meet the challenges ahead. — PAMELA M. IRONSIDE, director, Center for Research in Nursing Education, Indiana University The profession of nursing in the United States is at a significant moment. Since the last national nursing education study almost forty years ago, profound changes in science, technology, and the nature and settings of nursing practice have reshaped the field. Yet schools have lagged behind in adapting to these changes. Added to this, the profession faces a shortage of nurses and nursing faculty. To meet these challenges, the authors assert that schools, service providers, and the profession must change. They recommend four controversial yet essential changes that are needed to transform nursing education. A volume in The Carnegie Foundation for the Advancement of Teaching's Preparation for the

Professions series, the book discusses key topics for the future of the field and offers revolutionary recommendations for change.

patricia benner from novice to expert pdf: *Project Management Skills for Healthcare* Lisa Bove, Susan M. Houston, 2020-06-03 Project management skills are valuable for any healthcare project, not just technology projects. Non-technology activities that would benefit from project management skills include implementing a new policy housewide, updating training for use of the electronic health record (EHR), creating a new orientation program, quality assurance activities, submitting an article or presentation, writing a research proposal, or opening a new patient care unit. In addition, project management skills are not just for project managers, but they can be used by anyone leading these types of activities, such as managers, staff, educators, and researchers. Many books on healthcare project management have been focused on technology projects while non-technology projects flounder without the required knowledge or skills of the person leading the project. The purpose of this book is to discuss these skills based on the Project Management Institute (PMI) standards in a way that non-project managers would be able to understand and apply. Concepts from project initiation through project closure will be presented twice, first for novices and then for project leaders with more advanced skills. Practical, accessible, and containing numerous examples for each phase of the PMI Framework, this book will be a valuable resource for all healthcare professionals and both novice and experienced project managers.

patricia benner from novice to expert pdf: *Nursing Ethics: Feminist Perspectives* Helen Kohlen, Joan McCarthy, 2020-11-09 The aim of this book is to show how feminist perspectives can extend and advance the field of nursing ethics. It engages in the broader nursing ethics project of critiquing existing ethical frameworks as well as constructing and developing alternative understandings, concepts, and methodologies. All of the contributors draw attention to the operations of power inherent in moral relationships at individual, institutional, cultural, and socio-political levels. The early essays chart the development of feminist perspectives in the field of nursing ethics from the late 19th century to the present day and consider the impact of gender roles and gendered understandings on the moral lives of nurses, patients and families. They also consider the transformative potential of feminist perspectives to widen the scope of nursing and midwifery practices to include the social, economic, cultural and political dimensions of moral decision-making in health care settings. The second half of the book draws on feminist insights to critically discuss the role of nurses and midwives in leadership, healthcare organisations, and research as well as the provision of particular forms of care e.g. care in the home and abortion care.
