aging with grace pdf: *Queer Aging in North American Fiction* Linda M. Hess, 2019-01-24 Exploring representations of queer aging in North American fiction, this book illuminates a rich yet previously unheeded intersection within American culture. At a time when older LGBTQ persons gradually gain visibility in gerontological studies and in the media, this work provides a critical perspective concerned with the ways in which the narratives and images we have at our disposal shape our realities. Each chapter shines a spotlight on a significant work of queer fiction, beginning with post-WWII novels and ending with filmic representations of the 2010s, exploring narratives as both reflections and agents of broader cultural negotiations concerning queer sexuality and aging. As a result, the book not only redresses queer aging's history of invisibility, but also reveals narratives of queer aging to be particularly apt in casting new light on the ways in which growing older is perceived and conceptualized in North American culture.

Edelman, 2024-11-08 This compact book examines age friendliness within the framework of age-friendly ecosystems, and from a place-based approach, considering anchor institutions of neighborhoods, campuses and health environments as sites uniquely positioned to catalyze age equity and inclusivity. Age friendliness has grown from an idea into a social movement that recognizes the diversity of older adults, and integrates research, policy, programming and design practices. Contributors build upon the content shared through the symposium in order to examine how neighborhoods, campuses and health environments are uniquely poised to

support equity and to extend reach to historically marginalized populations of older adults. Ideas and experiences from national experts in aging, as well as real world experiences and narratives shared by older adults, students, community stakeholders and faculty researchers, are presented through a place-based approach. aging with grace pdf: *Aging, Nutrition and Taste* Jacqueline B. Marcus, 2019-04-15
Approximately 380 million people worldwide are 60 years of age or older. This number is predicted to triple to more than 1 billion by 2025. *Aging, Nutrition and Taste: Nutrition, Food Science and Culinary Perspectives for Aging Tastefully* provides research, facts, theories, practical advice and recipes with full color photographs to feed the rapidly growing aging population healthfully. This book takes an integrated approach, utilizing nutrition, food science and the culinary arts. A significant number of aging adults may have taste and smell or chemosensory disorders and many may also be considered to be undernourished. While this can be partially attributed to the behavioral, physical and social changes that come with aging, the loss or decline in taste and smell may be at the root of other disorders. Aging adults may not know that these disorders exist nor what can be done to compensate. This text seeks to fill the knowledge gap. *Aging, Nutrition and Taste: Nutrition, Food Science and Culinary Perspectives for Aging Tastefully* examines aging from three perspectives: nutritional changes that affect health and well-being; food science applications that address age-specific chemosensory changes, compromised disease states and health, and culinary arts techniques that help make food more appealing to diminishing senses. Beyond scientific theory, readers will find practical tips and techniques, products, recipes, and menus to increase the desirability, consumption and gratification of healthy foods and beverages as people age. - Presents information on new research and theories including a fresh look at calcium, cholesterol, fibers, omega-3 fatty acids, higher protein requirements, vitamins C, E, D, trace minerals and phytonutrients and others specifically for the aging population - Includes easy to access and usable definitions in each chapter, guidelines, recommendations, tables and usable bytes of information for health professionals, those who work with aging populations and aging people themselves - Synthesizes overall insights in overviews, introductions and digest summaries of each chapter, identifying relevant material from other chapters and clarifying their pertinence

aging with grace pdf: *Prospective Longevity* Warren C. Sanderson, Sergei Scherbov, 2019-11-19 From two leading experts, a revolutionary new way to think about and measure aging. Aging is a complex phenomenon. We usually think of chronological age as a benchmark, but it is actually a backward way of defining lifespan. It tells us how long we've lived so far, but what about the rest of our lives? In this pathbreaking book, Warren C. Sanderson and Sergei Scherbov provide a new way to measure individual and population aging. Instead of counting how many years we've lived, we should think about the number of years we have left, our "prospective age." Two people who share the same chronological age probably have different prospective ages, because one will outlive the other. Combining their forward-thinking measure of our remaining years with other

health metrics, Sanderson and Scherbov show how we can generate better demographic estimates, which inform better policies. Measuring prospective age helps make sense of observed patterns of survival, reorients understanding of health in old age, and clarifies the burden of old-age dependency. The metric also brings valuable data to debates over equitable intergenerational pensions. Sanderson and Scherbov's pioneering model has already been adopted by the United Nations. Prospective Longevity offers us all an opportunity to rethink aging, so that we can make the right choices for our societal and economic health.

aging with grace pdf: *The Age of Longevity* Rosalind C. Barnett, Caryl Rivers, 2016-08-22 Long, productive lives are the destiny of most of us, not just the privilege of our great-grandchildren. The story of aging is not one of steady decline and decay; we need a new narrative based on solid research, not scare stories. Today Americans enjoy a new, healthy stage of life, between roughly 65 and 79, during which we are staying engaged in the workplace, starting new relationships and careers, remaining creative and becoming entrepreneurs and job creators. We are in the midst of a major paradigm shift in the way we live. Our major milestones are shifting. The definition of "normal" behavior is changing. Today, we marry later or not at all; cohabitation is not just a stepping stone to marriage, but a long-term arrangement for many. Women often have their first child in their 40s, and increasingly before they marry. People enjoy active sex lives well into their 6th, 7th or even 8th decades. None of our institutions will remain the same. People are working longer, and given the declining birth rate, older workers will be in great demand. Four generations are increasingly working side by side, learning from each other. But we must ensure that the benefits of long life are not limited to a wealthy few. The Age of Longevity shows how we as a society can embrace the life-altering changes that are either coming in the near future or are already underway. The authors give readers a panoramic view of how they, the institutions that affect them, and the country as a whole will need to adapt to what's ahead. They offer strategies, based on cutting-edge research, that will enable individuals, institutions, companies, and governments to make the most of our lengthening life spans. Using real life examples throughout, the authors paint a picture of what our new longer lives will look like, and the changes that need to be made so we can all make those years both more productive and more enjoyable.
