Dr. Farid, from a surgeon's perspective, comprehends his task was to check, take action and aid recovery. Dr. Farid undertook his duty with true sincerity, responsibility, and joy, thus enabling him to find the path that eluded us." M. Jusuf Kalla Vice President Republic of Indonesia (2004-2009 & 2014-2019) "Dr. Farid Husain is indeed an extraordinary person. He is a man of patience and honesty who never once despaired of bringing the two conflicting parties of GAM and RI to the negotiating table." Malik Mahmud Former GAM Prime Minister "This man successfully implemented many of Jusuf Kalla's orders and succeeded in bringing

the conflicting sides to the negotiating table ...When the religious sentiment erupted in Poso, Central Sulawesi, several years ago, Farid went to extreme lengths behind the screen to bring about the signing of the Malino I Peace Treaty in December 2001." Special Edition of Tempo Magazine, October 30 2005 "...in my view, Farid Husain, just like Jusuf Kalla, was an essential troubleshooter. They could both be relied upon to solve problems." Pieter Feith Former Chief of Aceh Monitoring Mission (AMM) I wrote this book from the notes I compiled while conducting peace missions in several territories within our homeland, specifically in Poso, Ambon, and Aceh. As many of my notes have never been publicized before, Mr. Jusuf Kalla has no real idea of their contents. This was one fact that motivated me to write this book. I wanted to expose the 'unseen' and that is why I chose the title To See the Unseen. I hope that the experiences depicted in this book may benefit the readers, especially those with an interest in conflict resolution and peace.

behind the sce: *Behind the Scenes at Galileo's Trial* Richard J. Blackwell, 2006 Galileo's trial in 1633 before the Roman Inquisition is one of the most frequently mentioned topics in the history of science. Galileo's encounter with the Catholic Church was not only a major turning point in the history of western culture; it is the paradigm case of the clash between the institutional authority of religion and the authority of scientific reason, a clash that has come to define the modern era. Blackwell's new contribution to the Galileo affair concerns the official theological position against Galileo. The centerpiece of his project is the treatise entitled *Tractatus Syllepticus*, written by Melchior Inchofer, S. J., whose judgment of the orthodoxy of Galileo's Dialogue had been requested earlier by the Holy Office and was then incorporated into the proceedings of the trial. At the time, Inchofer's judgment against Galileo's book was both detailed and harsh. That judgment formed the basis for Inchofer's subsequent *Tractatus*, the first English translation of which is included in this volume. Inchofer's text provides a new and fascinating way of looking at the defense of the guilty verdict. Galileo and his trial. Both legal and theological behind-the-scenes aspects of Galileo's trial are discussed. Because of a weak legal case, a plea bargain was arranged, extrajudicially, then sabotaged in the Holy Office before the final decision of the case. Through his close scrutiny of the specifics of the trial, Blackwell renders a picture that is more complex, and ominous, than the usual portrayal of the trial.

behind the sce: **Toward Detonation Theory** Anatoly N. Dremin, 2012-12-06 It is known that the Chapman-Jouguet theory of detonation is based on the assumption of an instantaneous and complete transformation of explosives into detonation products in the wave front. Therefore, one should not expect from the theory any interpretations of the detonation limits, such as shock initiation of detonation and kinetic instability and propagation (failure diameter). The Zeldovich-Von Neuman-Doring (ZND) theory of detonation appeared, in fact, as a response to the need for a theory capable of interpreting such limits, and the ZND detonation theory gave qualitative interpretations to the detonation limits. These interpretations were based essentially on the theoretical notion that the mechanism of explosives transformation at detonation is a combustion of a layer of finite thickness of shock-compressed explosive behind the wave shock front with the velocity of the front. However, some experimental findings turned out to be inconsistent with the theory. A very small change of homogeneous (liquid) explosives detonation velocity with explosive charge diameter near the rather sizable failure diameter is one of the findings. The elucidation of the nature of this finding has led to the discovery of a new phenomenon. This phenomenon has come to be known as the breakdown (BD) of the explosive self-ignition behind the front of shock waves under the effect of rarefaction waves.

(photosynthesis), and many organisms make use of it in basic sensory mechanisms for guiding their behaviour, be it through the complex process of vision, or by the relatively more simple photosensitivity of microorganisms~urthermore, light has profound implications for the field of medicine, both as a cause of disease (ie UV damage of DNA), and as a therapeutic agent (ie photodynamic therapy). These and other processes are the basis for the science of photobiology~ which could be defined as the study of the effects of (visible and ultraviolet) light (from both the sun and artificial sources) on living matter. By its very nature, therefore, it is a multidisciplinary science involving branches of biology, chemistry, physics and medicine. This book contains a selection of papers which have been chosen to highlight recent advances in the various disciplines that make up photo biology. Although no book on photobiology can hope to be comprehensive, we hope that this volume includes a representative sample of much of what is new in the field. It is, however, inevitable that some areas will be better represented than others reflecting the biases of conference organisers and editors.
