Excerpts: It is difficult, perhaps impossible, to pinpoint when the first corrective lens was created. The history of optics and spectacles dates back very far in time, before a written history and involves a variety of characters. The earliest lens called the Nimrud lens could date back as far as 7000 B.C.. Current theory states that ancient Mesopotamians called Assyrians manufactured the Nimrud lens, which is a magnifying lens, to help them carve intricate patterns. On the other hand, the Nimrud lens could be what is called a burning glass and used to start fires and not a occupational aid lens at all. Either way the rock crystal Nimrud lens has a 3x magnification power and is the oldest lens of any type that we know of. At the time of this writing it is being housed and displayed at the British Royal museum and worth seeing for yourself. Another possible early lens can be traced through written account to Nero of ancient Rome. Its accepted as fact that he was quite myopic, but a tantalizing theory also states he used a polished emerald to peer through while watching gladiatorial games. Could this be the first myopic (-) corrective lens? As an optician it is your job to be an expert in this exciting field and you also have the honor of being part if its history. With the evolution of mass produced frames, inexpensive advanced lenses, and an online marketplace it more important than ever to stay abreast of the future of ophthalmics and understand its past. For opticianry to continue to thrive it is vital to position yourself as the definitive professional. This will allow you to separate yourself from the online marketplace and embrace the opportunity to profitably offer products tailored to your patrons needs.

Business: Most business plans are structured into seven sections. A completed business plan should be shared with employees to create a cohesive team focus. Also investors will request to see the business plan to determine the risk of failure or likelihood of success. The seven sections are:

1. Executive Summary - A concise summation or outline of the business plan. Usually this part is written last, as it is the most important section. Some items that are mentioned in the executive summary are: business name, concept, products/services, mission statement, financial requirements, and essential milestones.
2. Company Description - This is a broad view of your company, how it is structured, and type of business it will perform. Some items mentioned in the Company Profile are: legal form of business, needs the business will satisfy, brief history, overview of products and customers, short/long term goals.
3. Products/Services - A description of how you will turn a profit (aka, what are you selling?). Pictures, diagrams, and prototypes are often required. Suppliers, costs, and net revenue expected for each product are discussed here.
4. Market Analysis/Economics - Outline your market research here and present your conclusions about your market analysis. Include market size, trends, patterns, and potential growth here...
