- Over-the-Counter Markets: Decentralized markets for trading securities not listed on formal exchanges.

Risk and Return in Investments

A cornerstone of the book emphasizes the positive correlation between risk and expected return. Investors must balance their appetite for risk against their return expectations.

Portfolio Theory and Asset Allocation

Modern Portfolio Theory (MPT)

MPT, pioneered by Harry Markowitz, is extensively discussed:

- Diversification: Reducing risk by holding a variety of assets.
- Efficient Frontier: The set of optimal portfolios offering the highest expected return for a given level of risk.
- Risk-Return Tradeoff: The balance investors seek between potential gains and possible losses.

Asset Allocation Strategies

The PDF emphasizes:

- Strategic Asset Allocation: Long-term, policy-based approach.
- Tactical Asset Allocation: Short-term adjustments based on market conditions.
- Dynamic Asset Allocation: Continuous rebalancing to adapt to changing risk-return profiles.

Capital Market Equilibrium and Asset Pricing Models

The Capital Asset Pricing Model (CAPM)

The CAPM is central to understanding expected returns:

- Formula: $E(R_i) = R_f + \beta_i (E(R_m) - R_f)$
- Components:
 - R_f : Risk-free rate
 - β_i : Measure of an asset's sensitivity to market movements
 - $E(R_m)$: Expected return of the market portfolio

Arbitrage Pricing Theory (APT)

The APT offers an alternative to CAPM, considering multiple macroeconomic factors influencing asset returns.

Efficient Market Hypothesis (EMH)

The book discusses the EMH:

- Weak Form: Prices reflect all historical data.
- Semi-Strong Form: Prices incorporate all publicly available information.
- Strong Form: All information, public and private, is reflected in prices.

Fixed-Income Securities and Interest Rate Risks

Types of Bonds

- Government Bonds: Like U.S. Treasuries, considered low-risk.
- Corporate Bonds: Offer higher yields but carry more credit risk.
- Municipal Bonds: Tax-advantaged bonds issued by local governments.

Bond Valuation

The PDF explains:

- Present value calculations for bond pricing.
- Concepts of yield to maturity (YTM), current yield, and duration.

Risks in Fixed-Income Investments

- Interest Rate Risk: Price fluctuations due to changing rates.
- Credit Risk: Possibility of issuer default.
- Inflation Risk: Erosion of purchasing power.

Derivatives and Risk Management

- Futures: Agreements to buy or sell an asset at a future date at a predetermined price.
- Swaps: Contracts to exchange cash flows or liabilities.

Pricing and Valuation of Derivatives

The PDF covers models like the Black-Scholes formula for options pricing and the importance of understanding implied volatility.

- Herd behavior
- Overconfidence

essentials of investments zvi bodie pdf: The Power of Cities in International Relations Simon Curtis, 2014-04-16 Cities have become increasingly important to global politics, but have largely occupied a peripheral place in the academic study of International Relations (IR). This is a notable oversight for the discipline, although one which may be explained by IR's traditional state centrism, the subjugation of the city to the demands of the territorial state in the modern period, and a lack of conceptual and analytical frameworks that can allow scholars to include the impact of cities within their work. Presenting case-specific scholarship from leading experts in the field, each contribution guides the reader through the changing nature of cities in the international system and their increasing prominence in global governance outcomes. The book features case studies on the financial power of cities, city action in the security domain, collaboration of cities in coping with environmental problems, transnational urban regions, and mayors as international actors to illustrate if the relationship between the city and the state has changed in profound ways, and how cities are empowered by structural changes in world politics. The multidisciplinary and global focus in The Power of Cities in International Relations sheds much needed light on the significance of the reemergence of cities from the long shadow of the nation-state. Only by examining the mechanisms that have empowered cities in the last few decades can we understand their new functions and capabilities in global politics.
