essentials of statistics for the behavioral sciences pdf: The Scholarship of Teaching and Learning Jacqueline M. Dewar, Curtis D. Bennett, Matthew A. Fisher, 2018 The Scholarship of Teaching and Learning: A Guide for Scientists, Engineers, and Mathematicians shows college and university faculty members how to draw on their disciplinary knowledge and teaching experience to investigate questions about student learning. It takes readers all the way through the inquiry process beginning with framing a research question and selecting a research design, moving on to gathering and analyzing evidence, and finally to making the results public. Numerous examples are provided at each stage, many from published studies of teaching and learning in science, engineering, or mathematics. At strategic points, short sets of questions prompt readers to pause and reflect, plan, or act. These questions are derived from the authors' experience leading many workshops in the United States and Canada on how to do the scholarship of teaching and learning (SoTL). The taxonomy of SoTL questions-What works? What is? What could be?-that emerged from the SoTL studies undertaken by scholars in the Carnegie Academic for the Scholarship of Teaching and Learning serves as a framework at many stages of the inquiry process. The book addresses the issue of evaluating and valuing this work, including implications for junior faculty who wish to engage in SoTL. The authors explain why SoTL should be of interest to STEM (science, technology, engineering, and mathematics) faculty at all types of higher education institutions, including faculty members active in traditional STEM research. They also give their perspective on the benefits of SoTL to faculty, to their institutions, to the academy, and to students.

essentials of statistics for the behavioral sciences pdf: Problem-Solving Courts, Criminal Justice, and the International Gold Standard Anna Kawalek, 2021-01-03 This book presents findings from a process evaluation carried out at a problem-solving court located in England: Manchester Review Court. Unlike the widely documented successes of similar international models, there is no detail of Manchester Review Court in the accessible literature, not in any policy document, nor is there a court handbook or website outlining objectives and expected practice. In adopting the seminal 'wine' and 'bottle' analytical framework propounded by therapeutic jurisprudence scholars, and by carrying out a detailed comparative analysis comparing the court to successful international problem-solving courts, the original empirical data brings clarity to an overlooked area. A fidelity analysis is also offered for the forerunning English and Welsh drug courts, which were established during the early 2000s, but then shortly fell by the wayside without satisfactory explanation for why. Findings from the book shed new light on the causes of the English and Welsh drug court downfalls pending recent calls to roll out a fresh suite of problem-solving courts. In light of the international evidence base and national struggles in the field, the book proposes a renewed, UK-specific, fidelity matrix to forge the impetus for new practice in this area, whilst accounting for past failures and acknowledging current issues. Therefore, this book not only breaks new ground by advancing knowledge of a significantly uncharted area but provides important inroads for helping policymakers with their strategies in tackling recidivism, addiction, victimisation, and austerity, as widespread social and human issues currently facing both Manchester and the UK more broadly. Presenting significant advancements in theory, policy, and practice at both national and international scale, the book will be a valuable resource for academics and practitioners working in the fields of Therapeutic Justice, Criminal Law, Criminology, Criminal Justice, and Socio-Legal Studies.

essentials of statistics for the behavioral sciences pdf: Doing the Scholarship of Teaching and Learning in Mathematics Jacqueline M. Dewar, Curtis D. Bennett, 2014-11-03 The Scholarship of Teaching and Learning (SoTL) movement encourages faculty to view teaching "problems" as invitations to conduct scholarly investigations. In this growing field of inquiry faculty bring their disciplinary knowledge and teaching experience to bear on questions of teaching and learning. They systematically gather evidence to develop and support their conclusions. The results are to be peer reviewed and made public for others to build on. This Notes volume is written expressly for collegiate mathematics faculty who want to know more about conducting scholarly investigations into their teaching and their students' learning. Envisioned and edited by two mathematics faculty, the volume serves as a how-to guide for doing SoTL in mathematics.
