gender ideas interactions institutions pdf free: Threshold Concepts in Women's and Gender Studies Christie Launius, Holly Hassel, 2018-02-20 Threshold Concepts in Women's and Gender Studies: Ways of Seeing, Thinking, and Knowing is a textbook designed primarily for introduction to Women's and Gender Studies courses with the intent of providing both skills- and concept-based foundation in the field. The text is driven by a single key question: What are the ways of thinking, seeing, and knowing that characterize Women's and Gender Studies and are valued by

its practitioners? Rather than taking a topical approach, Threshold Concepts develops the key concepts and ways of thinking that students need in order to develop a deep understanding and to approach material like feminist scholars do, across disciplines. This book illustrates four of the most critical concepts in Women's and Gender Studies—the social construction of gender, privilege and oppression, intersectionality, and feminist praxis—and grounds these concepts in multiple illustrations. The second edition includes a significant number of updates, revisions, and expansions: the case studies in all five chapters have been revised and expanded, as have the end of chapter elements, statistics have been updated, and numerous references to significant news stories and cultural developments of the past three years have been added. Finally, many more callbacks to previous chapters have been incorporated throughout the textbook in order to remind students to carry forward and build upon what they have learned about each threshold concept even as they move on to a new one.

Co-written by one of the world's leading intersex activists and a highly respected scholar in biological sciences, and accompanied with detailed anatomical illustrations throughout, this pioneering text is the essential introduction to gender and sex diversity for gender studies, women's studies, biology and genetics courses, as well as professionals working with intersex and trans communities.
