- Alternate Interior Angles Theorem
- Vertical Angles Theorem
- Corresponding Angles Postulate
- Triangle Sum Theorem
- Pythagorean Theorem

## 4. Use Logical Reasoning and Proofs

Show all steps clearly, justify each move with a theorem or postulate, and write logical reasoning to arrive at the answer.

## 5. Review and Double-Check

After solving, verify calculations, check diagrams, and ensure your reasoning aligns with the problem's requirements.

## Sample Questions and Their Correct Answers

Below, we present common types of questions encountered in a Geometry Quarter 1 test along with detailed solutions.

## Question 1: Find the Measure of an Angle

Given: Two angles are supplementary, and one angle measures  $65^\circ$ . Find the measure of the other angle.

Solution:

Supplementary angles sum to  $180^\circ$ .

Let the unknown angle be  $x$ .

$$x + 65^\circ = 180^\circ$$

$$x = 180^\circ - 65^\circ = 115^\circ$$

Answer: The other angle measures  $115^\circ$ .

---

## Question 2: Identify Parallel Lines

Given: In a diagram, line  $m$  is cut by a transversal, forming alternate interior angles of  $70^\circ$  and  $70^\circ$ . Are lines  $m$  and  $n$  parallel?

Solution:

Alternate interior angles are congruent if and only if the lines are parallel. Since both angles are  $70^\circ$  and congruent, lines  $m$  and  $n$  are parallel.

Answer: Yes, lines  $m$  and  $n$  are parallel.

---

## Question 3: Find the Value of an Unknown Angle in a Triangle

Given: Triangle  $ABC$  has angles measuring  $50^\circ$  and  $60^\circ$ . Find the measure of angle  $C$ .

Solution:

The sum of angles in a triangle is  $180^\circ$ .

Let angle  $C$  be  $x$ .

$$50^\circ + 60^\circ + x = 180^\circ$$

$$x = 180^\circ - 110^\circ = 70^\circ$$

Answer: Angle  $C$  measures  $70^\circ$ .

---

## Question 4: Prove Congruence of Two Triangles

Given: Triangle  $ABC$  and triangle  $DEF$ , with  $AB \cong DE$ ,  $AC \cong DF$ , and  $\angle A \cong \angle D$ .

Which congruence postulate applies?

Solution:

By the SAS (Side-Angle-Side) postulate, since two sides and the included angle are congruent, Triangles ABC and DEF are congruent by SAS.

Answer: The triangles are congruent by SAS postulate.

---

## Question 5: Find the Length of a Segment

Given: In a right triangle, the hypotenuse is 13 units, and one leg measures 5 units. Find the length of the other leg.

Solution:

Using the Pythagorean theorem:

$$c^2 = a^2 + b^2$$

$$13^2 = 5^2 + b^2$$

$$169 = 25 + b^2$$

$$b^2 = 169 - 25 = 144$$

$$b = \sqrt{144} = 12$$

Answer: The other leg measures 12 units.

## Frequently Asked Questions

### What are the key topics covered in Geometry Quarter 1 tests?

Key topics typically include basic geometric figures, properties of angles, parallel and perpendicular lines, congruence, and introductory proofs.

## **How can I find the measure of an angle formed by two intersecting lines?**

Use the properties of vertical angles and adjacent angles; vertical angles are congruent, and supplementary angles sum to 180 degrees.

## **What is the Pythagorean theorem and how is it used in geometry tests?**

The Pythagorean theorem states that in a right triangle, the square of the hypotenuse equals the sum of the squares of the other two sides:  $a^2 + b^2 = c^2$ . It's used to find missing side lengths.

## **How do I determine if two lines are parallel or perpendicular?**

Parallel lines have the same slope, while perpendicular lines have slopes that are negative reciprocals. Use slope formulas to verify.

## **What are corresponding, alternate interior, and consecutive interior angles?**

Corresponding angles are equal when two lines are cut by a transversal; alternate interior angles are equal and lie on opposite sides of the transversal; consecutive interior angles are supplementary.

## **How do I find the area and perimeter of basic geometric shapes?**

Use formulas such as length  $\times$  width for rectangles,  $2(\text{length} + \text{width})$  for perimeter, and specific formulas for triangles, circles, and other shapes depending on given dimensions.

## **What are the properties of isosceles triangles?**

An isosceles triangle has two equal sides and angles opposite those sides are also equal. The angles at the base are congruent.

## **How can I prove two triangles are congruent?**

Use congruence postulates like SSS (Side-Side-Side), SAS (Side-Angle-Side), ASA (Angle-Side-Angle), or RHS (Right angle-Hypotenuse-Side).

## **What strategies help in solving geometry word**

## **problems?**

Draw diagrams, identify known and unknowns, write equations based on geometric properties, and check if the problem involves similar or congruent figures.

## **Where can I find reliable answers and explanations for my Geometry Quarter 1 tests?**

Reliable sources include your class notes, textbooks, online educational platforms like Khan Academy, and seeking help from your teacher or tutors.
