Sample Problem and Solution Outline

Example:

A roller coaster car with a mass of 500 kg is at the top of a hill 50 meters high. Calculate the potential energy at the top and the kinetic energy if the car reaches the bottom of the hill assuming no energy loss.

Step-by-Step Solution Using the Answer Key

1. Calculate potential energy (PE):

- $PE = m \times g \times h$

- $PE = 500 \text{ kg} \times 9.8 \text{ m/s}^2 \times 50 \text{ m} = 245,000 \text{ Joules}$

2. Determine kinetic energy (KE) at the bottom:

- Since energy is conserved, KE at the bottom = PE at the top

- $KE = 245,000 \text{ Joules}$

3. Conclude that, neglecting losses, the car's kinetic energy at the bottom is 245,000 Joules, and potential energy is zero at that point.

Conservation of Mechanical Energy

One of the fundamental concepts demonstrated in Gizmo activities is the conservation of mechanical energy, which states that in the absence of non-conservative forces like friction, the total mechanical energy remains constant.

Formula:

$$\text{Total Mechanical Energy} = \text{Potential Energy} + \text{Kinetic Energy} =$$

$\text{\text{constant}}$

$\backslash$

Potential Energy (PE):

$\backslash$

$$PE = mgh$$

$\backslash$

Where:

- m = mass of object (kg)
- g = acceleration due to gravity ($\sim 9.8 \text{ m/s}^2$)
- h = height above reference point (m)

Kinetic Energy (KE):

$\backslash$

$$KE = \frac{1}{2}mv^2$$

$\backslash$

Where:

- v = velocity of the object (m/s)

Application in Gizmo:

In the simulation, learners observe how a ball at the top of a ramp converts potential energy into kinetic energy as it slides down.

Energy Conversion in Practical Scenarios

Example 1: Pendulum Motion

- At the highest point, the pendulum has maximum potential energy and zero kinetic energy.
- At the lowest point, potential energy is minimal, and kinetic energy is maximum.
- The answer key guides students through calculating these energies at various positions, emphasizing energy conservation.

Example 2: Rollercoaster

- Gravitational potential energy at the top converts into kinetic energy at the bottom.
- The answer key provides step-by-step calculations for the energy at different points, considering real-world factors like friction for more advanced questions.

Example 3: Electrical to Light and Heat

- A light bulb converts electrical energy into light and thermal energy.

- The answer key might include questions on efficiency, calculating the percentage of energy converted into useful light versus heat.

Common Questions and How the Answer Key Addresses Them

The following are illustrative examples of questions often found in Gizmo activities and their corresponding solutions in the answer key.

1. Calculating Potential and Kinetic Energy at Different Points

Question:

A 2 kg ball is held at a height of 5 meters. What is its potential energy? If it falls to the ground, what is its kinetic energy just before impact?

Answer:

- Potential Energy:

$$\begin{aligned} & \backslash \\ PE &= mgh = 2 \times 9.8 \times 5 = 98, \text{J} \\ & \backslash \end{aligned}$$

- Assuming no energy losses, kinetic energy just before impact:

$$\begin{aligned} & \backslash \\ KE &= PE = 98, \text{J} \\ & \backslash \end{aligned}$$

2. Analyzing Energy Conservation with Friction

Question:

A 1.5 kg object slides down an inclined plane of height 4 meters with frictional losses amounting to 20 Joules. How much kinetic energy does it have at the bottom?

Answer:

- Potential energy at the top:

$$\begin{aligned} & \backslash \\ PE &= 1.5 \times 9.8 \times 4 = 58.8, \text{J} \\ & \backslash \end{aligned}$$

- Energy lost to friction: 20 J

- Remaining energy converting to kinetic:

$\backslash$

$$KE = PE - \text{Friction Loss} = 58.8 - 20 = 38.8 \text{ J}$$

3. Efficiency Calculations in Energy Conversions

Question:

A machine consumes 100 Joules of electrical energy but only produces 70 Joules of useful mechanical work. What is its efficiency?

Answer:

$$\text{Efficiency} = \left(\frac{\text{Useful Energy Output}}{\text{Energy Input}} \right) \times 100 = \left(\frac{70}{100} \right) \times 100 = 70\%$$
