the alcohol experiment pdf free: Legal Cannabis: The Great Social Experiment Peter M. Birkeland, 2018-06-07 Colorado. Washington. Oregon. Colorado. Since 2012 nine states and DC have legalized cannabis, with more states to follow. Already a \$9.7 billion dollar industry creating hundreds of thousands of new jobs, legal cannabis is not only one of the fastest growing industries, but it is changing the dynamics of American society. Through interviews and fieldwork, Peter M. Birkeland shines a sociological lens on the relevant issues of legal cannabis and investigates the most pressing issues. Who are the cannabis industry participants? What are the costs in running a marijuana business and how much money is generated? Who are the users of cannabis in this newly legal market? What are the challenges in creating a regulatory framework? What has happened to crime, teenage use, and the black market? Birkeland's book provides a documentary-like account of the emerging cannabis industry in Colorado, the first jurisdiction in the world to legalize cannabis cultivation, manufacturing, and retail sales. Birkeland worked with cannabis business owners, interviewed regulators, policy-makers (including Governor Hickenlooper), industry participants, and opponents to legalization. He attended tradeshow, symposiums, meet-ups, penetrated the black market, and visited communities that have embraced cannabis sales. Through his firsthand experience, interviews and research, Birkeland traces the evolution of the cannabis industry from strictly illegal to legal, and he documents the challenges operators, regulators, and consumers face in the quest to carry out sales of a federally illegal product. Is cannabis legalization a short-lived social experiment, or is it ushering a new era of herbal medicine and recreational use that will transform society? The author uncovers the realities of the newly legal cannabis industry in Colorado, a litmus test for other states considering legalizing cannabis.

the alcohol experiment pdf free: Lost Crops of Africa National Research Council, Policy and Global Affairs, Office of International Affairs, Board on Science and Technology for International Development, 1996-03-14 Scenes of starvation have drawn the world's attention to Africa's agricultural and environmental crisis. Some observers question whether this continent can ever hope to feed its growing population. Yet there is an overlooked food resource in sub-Saharan Africa that has vast potential: native food plants. When experts were asked to nominate African food plants for inclusion in a new book, a list of 30 species grew quickly to hundreds. All in all, Africa has more than 2,000 native grains and fruits—lost species due for rediscovery and exploitation. This volume focuses on native cereals, including: African rice, reserved until recently as a luxury food for religious rituals. Finger millet, neglected internationally although it is a staple for millions. Fonio (acha), probably the oldest African cereal and sometimes called hungry rice. Pearl millet, a widely used grain that still holds great untapped potential. Sorghum, with prospects for making the twenty-first century the century of sorghum. Tef, in many ways ideal but only now enjoying budding commercial production. Other cultivated and wild grains. This readable and engaging book dispels myths, often based on Western bias, about the nutritional value, flavor, and yield of these African grains. Designed as a tool for economic development, the volume is organized with increasing levels of detail to meet the needs of both lay and professional readers. The authors present the available information on where and how each grain is grown, harvested, and processed, and they list its benefits and limitations as a food source. The authors describe next steps for increasing the use of each grain, outline research needs, and address issues in building commercial production. Sidebars cover such interesting points as the potential use of gene mapping and other high-tech agricultural techniques on these grains. This fact-filled volume will be of great interest to agricultural experts, entrepreneurs, researchers, and individuals concerned about restoring food production, environmental health, and economic opportunity in sub-Saharan Africa. Conrod, Antoni Gual, Matilda Hellman, Silvia Matrai, David Miller, David Nutt, Jürgen Rehm, Jillian Reynolds, Tamyko Ysa, 2017-02-09 Addictions have increased markedly in contemporary societies over the past decades. As well as widely acknowledged issues surrounding illegal substance addictions, there are increasing numbers of problems related to behavioural addictions such as the use of legal substances such as antidepressants and amphetamines. These addictions are concerning for a range of public policy

fields, not least, public health and social cohesion. As a result, cohesive governance of addictive substances and behaviours is paramount to future public policy. This book is based on the findings of a five year, multidisciplinary project (Addictions and Lifestyles in Contemporary Europe - Reframing Addictions Project) studying the pace and impact of addictions in Europe, and is the concluding volume in the Governance of Addictive Substances and Behaviours series. Authored by 11 leading figures in the fields of public health, psychology, sociology, psychiatry, addiction studies, epidemiology, and social and public policy, the book takes a truly comprehensive approach to the study of the current state of addiction governance in Europe and proposals for a future governance framework. No one country has yet got governance policies right. The project's outcome is a plan for the redesign of addictions governance, which includes amendments to key metrics used in research, promoting individual-level to society-level scope of understanding in policy approaches, and bringing the impact of dependency on societal well-being to the fore. New Governance of Addictive Substances and Behaviours is an unprecedented study, both in terms of international reach and scope of issues addressed. It will be a key resource for anyone with an interest in research-driven European policy change in public health and the field of addictive substances and behaviours.
