artificial insemination in cattle pdf: *Anarchism and Animal Liberation* Anthony J. Nocella II, Richard J. White, Erika Cudworth, 2015-07-11 Building upon anarchist critiques of racism, sexism, ableism and classism, this collection of new essays melds anarchism with animal advocacy in arguing that speciesism is an ideological and social norm rooted in hierarchy and inequality. Rising from the anarchist-influenced Occupy Movement, this book brings together international scholars and activists who challenge us all to look more critically into the causes of speciesism and to take a broader view of peace, social justice and the nature of oppression. Animal advocates have long argued that speciesism will end if the humanity adopts a vegan ethic. This concept is developed into the argument that the vegan ethic has the most promise if it is also anti-capitalist and against all forms of domination.

artificial insemination in cattle pdf: The role of livestock in food security, poverty reduction and wealth creation in West Africa Food and Agriculture Organization of the United Nations , 2020-07-01 With the objective of gaining a better insight into the challenges and opportunities of the livestock sub-sector in West Africa, FAO has conducted several studies and held various workshops in recent years. The outcomes of these studies and workshops conducted between 2009 and 2014 were published and distributed as hard copy reports and disseminated as on-line publications. These reports included topics such as value chains, cross-border transhumance, animal feed resources, priority animal diseases, among others, were informative in their own right. Still, the fact that they targeted specific areas of livestock in a fragmented manner did not address the need of readers whose wish was to have a comprehensive understanding of the livestock sector in West Africa. It is in response to this demand for a comprehensive outlook of the West African Livestock sub-sector that different reports and studies have been compiled into this one book. The book has twelve chapters, covering almost all aspects of livestock in the region. Attempts were made to enrich the information provided by including eight short case studies focusing on different aspects of the livestock sub-sector in West Africa. The book attempts to fill the gap of a need for comprehensive information on the potential, performance, challenges, and prospects of the livestock sub-sector in West Africa.

artificial insemination in cattle pdf: Practical recommendations for donors to improve the enabling environment and increase sustainable investments in the dairy value chain in Ethiopia Cortez Tellez, A., Petruljeskov, M., 2024-01-30 This policy note aims at providing practical and evidence-based recommendations to improve the enabling environment and subsequently increase sustainable investments in the whole dairy value chain (VC) in Ethiopia. The relevance of this policy note relies on the fact that to date, there are multiple assessment and studies that have been conducted on the VC but - to the authors' knowledge - no study has yet attempted to study the linkages between the challenges as well as to determine which challenges faced by VC actors are effectively enabling environment factors. In other words, building from these multiple studies and some specific studies, this note aims at going one step further by mapping the different challenges found in the VC assessments, as several of them are closely intertwined (like land size affecting both feeding and effective cattle management), as well as determining at what scale the challenges impact the VC. For instance, some factors have a national level impact (i.e. they are a national enabling environment factor, affecting most or all VC actors), others have a regional level impact (i.e. a regional enabling environmental factor, affecting only the VC actors of a specific region), while others heavily depend on the individual characteristics of the VC actors.

artificial insemination in cattle pdf: Current and Future Reproductive Technologies and World Food Production G. Cliff Lamb, Nicolas DiLorenzo, 2013-10-29 This book addresses the impacts of current and future reproductive technologies on our world food production and provides a significant contribution to the importance of research in the area of reproductive physiology that has never been compiled before. It would provide a unique opportunity to separate the impacts of

how reproductive technologies have affected different species and their contributions to food production. Lastly, no publication has been compiled that demonstrates the relationship between developments in reproductive management tools and food production that may be used as a reference for scientists in addressing future research areas. During the past 50 years assisted reproductive technologies have been developed and refined to increase the number and quality of offspring from genetically superior farm animal livestock species. Artificial insemination (AI), estrous synchronization and fixed-time AI, semen and embryo cryopreservation, multiple ovulation and embryo transfer (MOET), in vitro fertilization, sex determination of sperm or embryos, and nuclear transfer are technologies that are used to enhance the production efficiency of livestock species.

artificial insemination in cattle pdf: Cattle husbandry in Eastern Europe and China Abele Kuipers, Andriy Rozstalnyy, Gerry Keane, 2023-08-07 This book presents an analysis of the dairy and associated sector developments in Eastern Europe and China. The transition in cattle husbandry in Eastern Europe, resulting in enormous structural changes, but not in an increased production volume, is different from emerging countries, like China, where traditional small scale farming goes together with the remodelling or start of mega farms. Capacity building by means of cooperation appears to be hindered by historical experience. Farm development paths were studied in more depth in Poland, Lithuania and Slovenia using detailed farmer surveys. Farmers' strategies, availability of resources, and opportunities and threats were analysed, and interactive group trainings in strategic management were part of the analysis. The results are presented here. Although farmers showed similar wishes concerning farm development, the local environment and policies determines the degree of achievement. Farm fragmentation, the high percentage of rented land and availability of suitable labour are major constraints. Future EU policies are a concern but new technologies are embraced. This book is a must for those interested in the transition in Eastern Europe. It is indispensable to consultants, marketers, companies, farm leaders and government officials in agriculture.

artificial insemination in cattle pdf: Animal Husbandry Sándor Kukovics, 2022-11-09 This volume presents selected issues in the complex and diverse science of animal husbandry. The use of computer programs provides an opportunity to improve breeding and optimize farm management. At the same time, the use of traditional breeding methods is also of decisive importance. Knowledge of animal welfare and animal wellness is of great help in controlling animal health issues and in economic production. In the biological processes of reproduction of dairy cows, the events of the 100 days after calving are of fundamental importance. Production systems influence the process of product production, in which the relationship between animal products and human health goes far beyond animal husbandry, and to which the issue of greenhouse gases is also connected. The quality of manufactured meat products is influenced by both on-farm and off-farm factors, but good meat cannot be produced from low-quality animals, even with excellent slaughterhouse work. Background knowledge of animal health – including the microbiome in the digestive tract, which makes use of the feed – makes this activity more effective, which is of particular importance in the case of broiler chickens. Knowing the behavioural characteristics of animals (rams) enables better management. Many horse breeds are capable of artificial gaits as a result of breeding and selection processes. Comparative knowledge of the movements of these horse breeds also helps to understand their differences. The quality of life of animals and the quality of manufactured products are also affected by polycyclic aromatic hydrocarbons from the environment, which, being stored and enriched in fat-containing tissues, can also have adverse effects on the human consumer. Each topic presented not only offers specialist knowledge but makes interesting reading in its own right.
