evolution making sense of life pdf: From Stars to Brains: Milestones in the Planetary Evolution of Life and Intelligence Andrew Y. Glikson, 2019-02-18 The permutation of basic atoms—nitrogen, hydrogen, oxygen, carbon and phosphorus—into the biomolecules DNA and RNA, subsequently evolved in cells and brains, defining the origin of life and intelligence, remains unexplained. Equally the origin of the genetic information and the intertwined nature of 'hardware' and 'software' involved in the evolution of bio-molecules and the cells are shrouded in mystery. This treatise aims at exploring individual and swarm behaviour patterns which potentially hint at as yet unknown biological principles. It reviews theories of evolution with perspectives from the earth sciences, commencing with the earliest observed records of life. This is followed by reviews and discussion of the building blocks of life, marine and terrestrial communities, the arthropods, birds and finally humans. It is suggested that, further to the mutation/natural selection processes established by Darwin and Wallace, an understanding of the evolution of intelligence remains little understood. A directionality of evolutionary trajectories is evident, not least the purposeful thinking process of humans as well as animals. It is not clear how directional intelligence, manifested for example by the collective intelligence of arthropod colonies, has evolved from mutation/natural selection processes. Potential clues for the understanding of life and evolution are provided by Aristotle's dictum of "the whole being greater than the sum of the parts", Niels Bohr's principle of quantum complementarity and George Ellis' theory of top-down causality. Inherent in the question of the origin of life is an anthropocentric bias, related to the self-referential Anthropic Principle and theological paradigms of man's supposed dominion over all other species. The Anthropic Principle, however, should be capable of being circumvented using the scientific falsification method, assuming universal verified constants of physics. The phenomenon of the human mastery of fire and the splitting of the atom, leading to the seventh major mass extinction of species, remains incomprehensible.

evolution making sense of life pdf: *Exploring the Evolution of our Ancestors* Dominique Adriaens, 2025-08-18 This is a captivating evolutionary narrative of the human body, exploring the pivotal traits that make humans unique as a species. It provides a better understanding of why we look the way we do, through an evolutionary morphological lens, by delving into the functional explanations for the unique characteristics of us and our ancestors and the evolutionary pathways that shaped them. It integrates changes in anatomy with functional shifts, but also with underlying genetic and environmental transformations that drove our evolution. The main body of the book focuses around four fundamental themes that have evolutionarily sculpted us into who we are today, ever since the shared origin with the chimpanzee: diet, brain, locomotion and skin. This book not only promises to enrich our understanding of human evolution but also challenges us to reconsider what it means to be human in light of our ancient lineage and ongoing evolutionary journey. It also: Provides a complete overview of the major events of human evolution; Helps readers understand why our body has been shaped the way it is; Integrates genes, anatomy, function, behavior and ecology, creating a more complete picture, written in an accessible text while incorporating many facts and figures building upon both historic and recent literature; Offers an up-to-date view of how anthropologists currently see our evolution; Focuses on four fundamental changes in the brain, diet,

skin and locomotion; Explains some aspects of what humans are experiencing today (e.g., why some people are lactose intolerant).

evolution making sense of life pdf: Can Science Make Sense of Life? Sheila Jasanoff, 2019-03-05 Since the discovery of the structure of DNA and the birth of the genetic age, a powerful vocabulary has emerged to express science's growing command over the matter of life. Armed with knowledge of the code that governs all living things, biology and biotechnology are poised to edit, even rewrite, the texts of life to correct nature's mistakes. Yet, how far should the capacity to manipulate what life is at the molecular level authorize science to define what life is for? This book looks at flash points in law, politics, ethics, and culture to argue that science's promises of perfectibility have gone too far. Science may have editorial control over the material elements of life, but it does not supersede the languages of sense-making that have helped define human values across millennia: the meanings of autonomy, integrity, and privacy; the bonds of kinship, family, and society; and the place of humans in nature.

evolution making sense of life pdf: Making Sense of Heritability Neven Sesardic, 2005-10-13 In this book, Neven Sesardic defends the view that it is both possible and useful to measure the separate contributions of heredity and environment to the explanation of human psychological differences. He critically examines the view - very widely accepted by scientists, social scientists and philosophers of science - that heritability estimates have no causal implications and are devoid of any interest. In a series of clearly written chapters he introduces the reader to the problems and subjects the arguments to close philosophical scrutiny. His conclusion is that anti-heritability arguments are based on conceptual confusions and misunderstandings of behavioural genetics. His book is a fresh and compelling intervention in a very contentious debate.

evolution making sense of life pdf: Family Systems and Congregational Life R. Robert Creech, 2019-02-19 Experienced pastor and seminary teacher R. Robert Creech helps pastoral leaders increase their effectiveness by applying family systems theory to congregational life and ministry. Creech introduces readers to the basic concepts of Bowen Family Systems Theory, applies family theory to the work of ministry in church settings, and connects systems thinking to the everyday aspects of congregational ministry, such as preaching, pastoral care, leadership, spiritual formation, and interpreting biblical texts. evolution making sense of life pdf: Organism and Environment Russell Winslow, 2017-08-29 Organism and Environment performs an examination into the way the contemporary life sciences are heralding a revolution of the most basic philosophical concepts of the Western world. Analyzing recent research in microbiology and evolution theory, the present book argues that these discourses are adding their voices to a growing chorus which is announcing a disruption, if not an end, to the understanding of the order of the world articulated in humanism. What does it mean to be a living substance? Are there such things as living individuals? How are living beings free? The discourses of microbiology, the medical sciences and evolution theory are revealing a living organism that escapes the limited frame that Enlightenment humanism has traditionally used to answer these (and other) ontological questions. Appealing to the theoretical lenses provided by Michel Foucault, Hans Georg Gadamer and Gilles Deleuze, Organism and Environment offers an interpretation of the way the contemporary life sciences are giving articulation to a posthuman ontological order.

evolution making sense of life pdf: The Cybernetic Brain Andrew Pickering, 2010-04-15 Cybernetics is often thought of as a grim military or industrial science of control. But as Andrew Pickering reveals in this beguiling book, a much more lively and experimental strain of cybernetics can be traced from the 1940s to the present. The Cybernetic Brain explores a largely forgotten group of British thinkers, including Grey Walter, Ross Ashby, Gregory Bateson, R. D. Laing, Stafford Beer, and Gordon Pask, and their singular work in a dazzling array of fields. Psychiatry, engineering, management, politics, music, architecture, education, tantric yoga, the Beats, and the sixties counterculture all come into play as Pickering follows the history of cybernetics' impact on the world, from contemporary robotics and complexity theory to the Chilean economy under Salvador Allende. What underpins this fascinating history, Pickering contends, is a shared but unconventional vision of the world as ultimately unknowable, a place where genuine novelty is always emerging. And thus, Pickering avers, the history of cybernetics provides us with an imaginative model of open-ended experimentation in stark opposition to the modern urge to achieve domination over nature and each other.

evolution making sense of life pdf: Making Sense of the Learning Turn Anders Örtengren, 2024-05-09 From learning toy and learning society to learning city and learning organization, what is meant by learning? The main focus of this volume is to increase our understanding of the learning turn referring, in this book, to the frequent occurrence and usage of terms in the last few decades where the word learning is the premodifier. The authors also offer insights into the use of the word learning as a premodifier in the future and discuss what, if anything, may replace it, such as knowledge (as in knowledge management) and smart (as in smart city). An extensive range of academic disciplines are covered including political science, economics, human geography, philosophy, linguistics, higher education, working life science, management and organization, and marketing. While a single, overall, unified conclusion is not provided, Making Sense of the Learning Turn presents a variety of voices and perspectives. Some contributors are critical towards the learning turn, explaining it in terms of fashion-following, manipulation, and seduction. Others interpret the learning turn more lightly or suggest a more collective form of learning as an alternative to the individualization of learning that some authors argue has been the case thus far.

evolution making sense of life pdf: Making Sense of Messages Mark Stoner, 2019-11-13 Making Sense of Messages, now in its second edition, retains the apprenticeship approach which facilitates effectively learning the complex content and skills of rhetorical theory and criticism. A new chapter on "The Rhetoric of Ignorance" provides needed theory and examples that help students deal with the new rhetorical landscape marked by such discursive complexities as "fake news," "whataboutism," and denial of science that creates rather than reduces uncertainty in public argument. A new chapter, "Curating and Analyzing Multimodal Mediated Rhetoric," deals with problems of media criticism in the digital age. It provides theory, models of application, and commentary that help novice critics understand and mindfully practice criticism that leads to

insight, not mere opinion. Throughout the book, extended and updated examples and commentaries are designed to promote novice-to-expert agency in students. This textbook is ideal for introductory courses in contemporary rhetoric, rhetorical criticism, and critical analysis of mass media.

evolution making sense of life pdf: Genetics and the Literary Imagination Clare Hanson, 2020-05-06 Oxford Textual Perspectives is a series of informative and provocative studies focused upon literary texts (conceived of in the broadest sense of that term) and the technologies, cultures, and communities that produce, inform, and receive them. It provides fresh interpretations of fundamental works and of the vital and challenging issues emerging in English literary studies. By engaging with the materiality of the literary text, its production, and reception history, and frequently testing and exploring the boundaries of the notion of text itself, the volumes in the series question familiar frameworks and provide innovative interpretations of both canonical and less well-known works. This is the first book to explore the dramatic impact of genetics on literary fiction over the past four decades. After James Watson and Francis Crick's discovery of the structure of DNA in 1953 and the subsequent cracking of the genetic code, a gene-centric discourse developed which had a major impact not only on biological science but on wider culture. As figures like E. O. Wilson and Richard Dawkins popularised the neo-Darwinian view that behaviour was driven by genetic self-interest, novelists were both compelled and unnerved by such a vision of the origins and ends of life. This book maps the ways in which Doris Lessing, A.S. Byatt, Ian McEwan, and Kazuo Ishiguro wrestled with the reductionist neo-Darwinian account of human nature and with the challenge it posed to humanist beliefs about identity, agency, and morality. It argues that these novelists were alienated to varying degrees by neo-Darwinian arguments but that the recent shift to postgenomic science has enabled a greater rapprochement between biological and (post)humanist concepts of human nature. The postgenomic view of organisms as agentic and interactive is echoed in the life-writing of Margaret Drabble and Jackie Kay, which also explores the ethical implications of this holistic biological perspective. As advances in postgenomics, especially epigenetics, provoke increasing public interest and concern, this book offers a timely analysis of debates that have fundamentally altered our understanding of what it means to be human.

evolution making sense of life pdf: Life In the Balance Joni Eareckson Tada, 2010-08-11 Never before has it been so important for Christians to discover the answers God's Word holds to our culture's biggest ethical and social dilemmas. Every day, the 24-hour news cycle offers stories from around the world of unimaginable physical, mental and emotional suffering. Yet more often than not, these stories and the underlying problems they represent are reported with no suggestions for resolution. Can it really be true that there are no solutions to our world's biggest crises? Joni Eareckson Tada refuses to believe it. On her TV show, she has interviewed scores of people who have faced life's toughest battles—and emerged victorious! In *Life in the Balance*, Joni and her friends take on some of the most difficult issues covered by the evening news, such as street violence, abortion, autism, genocide and stem-cell research. But they won't just tell the stories; they'll dig deep into the Word of God to find real and lasting solutions to so-called "unsolvable" problems. This workbook, designed for participants in a *Life in the Balance* individual and group study (Leader Guide with DVD sold separately), will guide readers to apply the timeless yet timely truth of God's Word to society's greatest challenges.

evolution making sense of life pdf: Systematic Theology Thomas P. Rausch, 2016 Systematic theology seeks to understand and render more intelligible the central doctrines of faith and to show how they are related to each other. It tries to demonstrate how these doctrines are rooted in Scripture and develop in the history of the church; most important, it strives to more adequately express and sometimes reinterpret the church's doctrinal tradition, always in the interest of better communicating the mystery of salvation and bringing it into a dialogue with culture. The present text is intended to be concise and accessible, an introduction that explores basic themes in Catholic systematic theology from a biblical, historical, and contemporary perspective, always aware of today's theological pluralism.

evolution making sense of life pdf: Origin of Life via Archaea Richard Gordon, 2024-10-01

This book surveys the models for the origin of life and presents a new model starting with shaped droplets and ending with life as polygonal Archaea; it collects the most published micrographs of Archaea (discovered only in 1977), which support this conclusion, and thus provides the first visual survey of Archaea. Origin of Life via Archaea's purpose is to add a new hypothesis on what are called "shaped droplets", as the starting point, for flat, polygonal Archaea, supporting the Vesicles First hypothesis. The book contains over 6000 distinct references and micrographs of 440 extant species of Archaea, 41% of which exhibit polygonal phenotypes. It surveys the intellectual battleground of the many ideas of the origin of life on earth, chemical equilibrium, autocatalysis, and biotic polymers. This book contains 17 chapters, some coauthored, on a wide range of topics on the origin of life, including Archaea's origin, patterns, and species. It shows how various aspects of the origin of life may have occurred at chemical equilibrium, not requiring an energy source, contrary to the general assumption. For the reader's value, its compendium of Archaea micrographs might also serve many other interesting questions about Archaea. One chapter presents a theory for the shape of flat, polygonal Archaea in terms of the energetics at the surface, edges and corners of the S-layer. Another shows how membrane peptides may have originated. The book also includes a large table of most extant Archaea, that is searchable in the electronic version. It ends with a chapter on problems needing further research. Audience This book will be used by astrobiologists, origin of life biologists, physicists of small systems, geologists, biochemists, theoretical and vesicle chemists.

evolution making sense of life pdf: A Liberation Theology of the Brain Carmelo Santos-Rolón, 2025-06-10 Drawing on experiences from the lab, the local congregation, the immigrant rights movement, the university classroom, the global church, and brain science, this book invites readers to discover the transformative possibilities that arise when we recognize that the insights of science and theology can complement and transform each other. Brain science and theology can be powerful partners in God's work of liberating all of us from the internalized structures of oppression that colonize imaginations, imprison emotions, subjugate bodies, and fracture societies. Trained as a scientist, a pastor, and a theologian, Carmelo Santos-Rolón brings together insights from various fields in neuroscience and the cognitive sciences (such as the neuroscience of religious experience, the neuroscience of emotions, the cognitive science of religion, and the neuroscience of decision-making) with data from liberation, postcolonial, decolonial, and Lutheran ecumenical theologies to analyze the spiritual experience of holistic liberation. The result is a theological framework, informed by science, that allows us to appreciate how the Spirit of God is at work in, with, and under neurons, bodies, and communities in all their beautiful messiness and complexity. In the tradition of liberation theologies, which insist that action and reflection belong together and must inform each other, this book aims at a theology with dirty hands and worn-out shoes. It is meant for a people who are not just intellectually curious about who God is and how religion affects our brains, but who are eager to join in God's work of bringing healing and hope to a wounded world. Theology and (neuro)science, together, allow us to witness how the Spirit of God is at work deep inside the nooks and crannies of our brains, in the chemistry of our nervous systems, in the emotions that orient our actions, and in the communities that shape our identities. Through tangible means, such as words and rituals, symbols and narratives, sacraments and community, God liberates us for lives of meaning and purpose at the service of the beautiful future that God is bringing into being.

evolution making sense of life pdf: *Posthuman Life* David Roden, 2014-10-10 We imagine posthumans as humans made superhumanly intelligent or resilient by future advances in nanotechnology, biotechnology, information technology and cognitive science. Many argue that these enhanced people might live better lives; others fear that tinkering with our nature will undermine our sense of our own humanity. Whoever is right, it is assumed that our technological successor will be an upgraded or degraded version of us: Human 2.0. *Posthuman Life* argues that the enhancement debate projects a human face onto an empty screen. We do not know what will happen and, not being posthuman, cannot anticipate how posthumans will assess the world. If a posthuman future will not necessarily be informed by our kind of subjectivity or morality the limits of our current knowledge must inform any ethical or political assessment of that future. *Posthuman Life* develops a critical metaphysics of posthuman succession and argues that only a truly speculative posthumanism can support an ethics that meets the challenge of the transformative potential of technology.

evolution making sense of life pdf: *Creationism's Trojan Horse* Barbara Forrest, Paul R. evolution making sense of life pdf: *Human Evolutionary Demography* Oskar Burger, Ronald Lee, Rebecca Sear, 2024-06-14 Human evolutionary demography is an emerging field blending natural science with social science. This edited volume provides a much-needed, interdisciplinary introduction to the field and highlights cutting-edge research for interested readers and researchers in demography, the evolutionary behavioural sciences, biology, and related disciplines. By bridging the boundaries between social and biological sciences, the volume stresses the importance of a unified understanding of both in order to grasp past and current demographic patterns. Demographic traits, and traits related to demographic outcomes, including fertility and mortality rates, marriage, parental care, menopause, and cooperative behavior are subject to evolutionary processes. Bringing an understanding of evolution into demography therefore incorporates valuable insights into this field; just as knowledge of demography is key to understanding evolutionary processes. By asking questions about old patterns from a new perspective, the volume—composed of contributions from established and early-career academics—demonstrates that a combination of social science research and evolutionary theory offers holistic understandings and approaches that benefit both fields. *Human Evolutionary Demography* introduces an emerging field in an accessible style. It is suitable for graduate courses in demography, as well as upper-level undergraduates. Its range of research is sure to be of interest to academics working on demographic topics (anthropologists, sociologists, demographers), natural scientists working on evolutionary processes, and disciplines which cross-cut natural and social science, such as evolutionary psychology, human behavioral ecology, cultural evolution, and evolutionary medicine. As an accessible introduction, it should interest readers whether or not they are currently familiar with human evolutionary demography.
