jacks or better strategy pdf: Hard Target Stephan Haggard, Marcus Noland, 2017-05-30 Because authoritarian regimes like North Korea can impose the costs of sanctions on their citizens, these regimes constitute hard targets. Yet authoritarian regimes may also be immune—and even hostile—to economic inducements if such inducements imply reform and opening. This book captures the effects of sanctions and inducements on North Korea and provides a detailed reconstruction of the role of economic incentives in the bargaining around the country's nuclear program. Stephan Haggard and Marcus Noland draw on an array of evidence to show the reluctance of the North Korean leadership to weaken its grip on foreign economic activity. They argue that inducements have limited effect on the regime, and instead urge policymakers to think in terms of gradual strategies. Hard Target connects economic statecraft to the marketization process to understand North Korea and addresses a larger debate over the merits and demerits of engagement with adversaries.

jacks or better strategy pdf: The Biology of Investing John R. Nofsinger, Corey A. Shank, 2020-03-30 Why do people's financial and economic preferences vary so widely? 'Nurture' variables such as socioeconomic factors partially explain these differences, but scientists have been discovering that 'nature' also plays an important role. This is the first book to bring together these scientific insights for a holistic view of the role of human biology in financial decision-making. Geneticists are now examining which genetic markers are associated with financial and economic preferences. Neuroscientists are now determining where in the brain financial decisions are made and how that varies between people. Endocrinologists relate the level of different hormones circulating in the body to financial risk-taking. Researchers are exploring how physiology and environmental conditions influence investment decisions, and how three types of cognitive ability play essential roles in investment success. This exciting and relevant work being done in these academic silos has generally not been transmitted among the scientific areas, or to industry. For the first time, this book integrates all these areas, explaining the myriad ways in which a person's biology influences their investing decisions. Financial analysts, advisors, market participants, and upper-level undergraduate and postgraduate students of behavioral finance, behavioral economics, and investing will find this book invaluable, enabling a deeper understanding of investors' decision-making processes. To further ensure this new material is accessible to students, PowerPoint slides are available online for instructors' use.
