How To Think Like An Anthropologist Pdf

how to think like an anthropologist pdf: *How to Think Like an Anthropologist* Matthew Engelke, 2019-06-18 What is anthropology? What can it tell us about the world? Why, in short, does it matter? For well over a century, cultural anthropologists have circled the globe, from Papua New Guinea to suburban England and from China to California, uncovering surprising facts and insights about how humans organize their lives and articulate their values. In the process, anthropology has done more than any other discipline to reveal what culture means--and why it matters. By weaving together examples and theories from around the world, Matthew Engelke provides a lively, accessible, and at times irreverent introduction to anthropology, covering a wide range of classic and contemporary approaches, subjects, and practitioners. Presenting a set of memorable cases, he encourages readers to think deeply about some of the key concepts with which anthropology tries to make sense of the world--from culture and nature to authority and blood. Along the way, he shows why anthropology matters: not only because it helps us understand other cultures and points of view but also because, in the process, it reveals something about ourselves and our own cultures, too. --Cover.

how to think like an anthropologist pdf: *What's in it for me?* Thomas Prosser, 2021-01-12 This punchy and provocative book asks a simple but overlooked question: why do we have the political views that we do? Offering a lively and original analysis of five worldviews – conservatism, national populism, liberalism, the new left and social democracy – Thomas Prosser argues that our views tend to satisfy self-interest, albeit indirectly, and that progressive worldviews are not as altruistic as their adherents believe. But *What's in it for me?* is far from pessimistic. Prosser contends that recognition of self-interest makes us more self-reflective, allowing us to see humanity in adversaries and countering the influence of echo chambers. As populist parties rise and liberalism and social democracy decline, this timely intervention argues that to solve our political differences, we must first realise what we have in common.

how to think like an anthropologist pdf: *The Anthropology of Parliaments* Emma Crewe, 2021-05-13 *The Anthropology of Parliaments* offers a fresh, comparative approach to analysing parliaments and democratic politics, drawing together rare ethnographic work by anthropologists and politics scholars from around the world. Crewe's insights deepen our understanding of the complexity of political institutions. She reveals how elected politicians navigate relationships by forging alliances and thwarting opponents; how parliamentary buildings are constructed as sites of work, debate and the nation in miniature; and how politicians and officials engage with hierarchies,

continuity and change. This book also proposes how to study parliaments through an anthropological lens while in conversation with other disciplines. This book builds on existing scholarship and practice, offering unique reflections from faculty, staff, and students about potential avenues for change that go beyond programs and policies. It recognizes the important work achieved to date on this topic but argues that transformation of cultures, rather than reform of practices, is now required. Starting from the premise that cultural change must be embedded in groups of people working together, the contributors to the book offer insights into what makes for constructive, effective collaborations between activists in universities and the wider community, as well as with university leaders, managers, and policy-makers. The volume is an interdisciplinary, international account/analysis of attempts to transform higher education cultures in an attempt to eradicate GBV. The chapters, contributed by leading scholars and practitioners in the field, span the experiences of GBV in Canada, the United States, Scotland, England, France, and India. *Collaborating for Change* reveals the different institutional, political, and cultural contexts in which activists, scholars, and practitioners endeavor to eradicate GBV and provides insights for others engaged in this work around the globe. how to think like an anthropologist pdf: Writing in Anthropology Shan-Estelle Brown, 2017 Writing in Anthropology is the ideal, pocket-sized manual for undergraduate students and emerging anthropologists who wish to improve their writing. Anthropology is a rapidly changing, global social science that encompasses a wide range of subfields, including archeology, cultural anthropology, biological/physical anthropology, linguistic anthropology, medical anthropology, and applied anthropology. It is also a growing field. While the economic downturn might motivate many college students to seek majors they perceive as more practical, the United States Bureau of Labor Statistics projects job growth for anthropologists and archaeologists through 2020 at 21%, which is faster than the average for all other occupations.[1] And more undergraduate students in the United States are majoring in the social sciences and history than ever before: 175,000 students were social science and history majors in 2009-10 (the specific number of anthropology majors is not available).[2] In Canada, another 134,700 undergraduates major in Social and Behavioral Sciences and Law, 4,000 of them in anthropology.[3] Beyond serving their own majors, anthropology departments offer many courses for non-majors; indeed, at many universities it is one of the go-to fields for students seeking to fulfill both general education and W (writing-intensive) course requirements. Writing is central to the work of anthropologists and they employ a wide range of genres, including fieldnotes, ethnographies, journal articles, reviews, reports, essays, personal narratives, and grant proposals. Most anthropology courses—both those in the major and for general education and W requirements—include substantial writing assignments. Those assignments often align with the professional genres listed above, but perhaps more are framed as school or apprentice genres—reading responses, summaries, literature reviews, personal reflections, and research papers—designed to help students process course content. While anthropologists appreciate good writing and occasionally focus explicitly on it—each year, for example, the American Anthropological Association holds a workshop on writing for graduate students and professionals—there is no compact, practical writing guide that meets the needs of undergraduates and beginning graduate students. This Brief Guide aims to address that gap by pursuing four goals: * Introduce the major genres and habits of writing in anthropology.* Explain how reflexivity, expression, and interpretation are vital to the field.* Convey insider strategies for writing and editing in the discipline.* Describe the basic conventions for using sources; and to model a scholarly yet accessible style.

how to think like an anthropologist pdf: HIV/AIDS and the Social Consequences of Untamed

Biomedicine Graham Fordham, 2014-11-13 Drawing on the case of HIV/AIDS in Thailand, this book examines how anthropological and other interpretative social science research has been utilized in modeling the AIDS epidemic, and in the design and implementation of interventions. It argues that much social science research has been complicit with the forces that generated the epidemic and with the social control agendas of the state, and that as such it has increased the weight of structural violence bearing upon the afflicted. The book also questions claims of Thai AIDS control success, arguing that these can only be made at the cost of excluding categories such as intravenous drug users, the incarcerated, and homosexuals, who continue to experience extraordinarily high levels of levels of HIV infection. Considered deviant and undeserving, these persons have deliberately been excluded from harm reduction programs. Overall, this work argues for the untapped potential of anthropological research in the health field, a confident anthropology rooted in ethnography and a critical reflexivity. Crucially, it argues that in context of interdisciplinary collaborations, anthropological research must refuse relegation to the status of an adjunct discipline, and must be free epistemologically and methodologically from the universalizing assumptions and practices of biomedicine.

how to think like an anthropologist pdf: *Multimodal Methods in Anthropology* Samuel Gerald Collins, Matthew S. Durlington, 2024-04-26 Multimodal Methods in Anthropology develops several goals simultaneously. First, it is an introduction to the ways that multimodality might work for students and practitioners of anthropology, using multiple examples from the authors' research and from the field. Second, the book carefully examines the ethics of a multimodal project, including the ways in which multimodality challenges and reproduces "digital divides." Finally, the book is a theoretical introduction that repositions the history of anthropology along axes of multimodality and reframes many of the essential questions in anthropology alongside collaboration and access. Each chapter introduces new methods and techniques, frames the ethical considerations, and contextualizes the method in the work of other anthropologists. Multimodal Methods in Anthropology takes both students and practitioners through historical and contemporary sites of multimodality and introduces the methodological and theoretical challenges of multimodal anthropology in a digital world. Like multimodality itself, readers will come away with new ideas and new perspectives on established ideas, together with the tools to make them part of their practice. It is an ideal text for a variety of methods-based courses in anthropology and qualitative research at both the undergraduate and the graduate level.

how to think like an anthropologist pdf: *Against Colonization and Rural Dispossession* Dip Kapoor, 2017-08-15 Under the guise of 'development', a globalizing capitalism has continued to

cause poverty through dispossession and the exploitation of labour across the Global South. This process has been met with varied forms of rural resistance by local movements of displaced farm workers, small and landless (women) peasants, and indigenous peoples in South and East Asia, the Pacific and Africa, who are resisting the forced appropriation of their land, the exploitation of labour and the destruction of their ecosystems and ways of life. In this provocative new collection, engaged scholars and activists combine grounded case studies with both Marxist and anti-colonial analyses, suggesting that the developmental project is a continuation of the colonial project. The authors then demonstrate the ways in which these local struggles have attempted to resist colonization and dispossession in the rural belt, thereby contributing essential movement-relevant knowledge on these experiences in the Global South. A vital addition to the fields of critical development studies, political-sociology, agrarian studies and the anthropology of resistance, this book addresses academics and analysts who have either minimized or overlooked local resistances to colonial capital, especially in the Asia-Pacific and Africa regions.

History would have us believe the sea has always been a male realm, the idea of female captains almost unthinkable. But there is one exception, so notable she defies any expectation. This is her remarkable story. Captain Thurídur, born in Iceland in 1777, lived a life that was both controversial and unconventional. She later became an acclaimed fishing captain brilliant at weather-reading and seacraft and consistently brought in the largest catches. In the Arctic seas where drownings occurred with terrifying regularity, she never lost a single crewmember. Renowned for her acute powers of observation, she also solved a notorious crime. In this extremely unequal society, she used the courts to fight for justice for the abused, and in her sixties, embarked on perilous journeys over trackless mountains. Weaving together fastidious research and captivating prose, Margaret Willson reveals Captain Thurídur's fascinating story, her extraordinary courage, intelligence, and personal integrity. This challenging book is essential for anyone who wants to understand what is wrong with business school theory and what we might do about it. For students and teachers of management, the standard textbook reproduces the dominant ideas about the way that business should be done. This book turns those ideas on their head, asking awkward questions about authority, technology and markets and demanding that its readers think hard about whether they want to reproduce those ideas too. Students of management, like everyone else, know that the current global system is broken but they don't know what they can do about it. This unique book uses 200 years of anarchist ideas to give readers a clear guide for building the organizations and businesses of the future and places choice and responsibility at the centre of making a new world for people and the planet.
