list of toxic foods for dogs pdf: *No More Cancer* Gary Null, 2014-07-29 One word strikes more fear into a person's mind than any other: CANCER. The physical, mental, emotional, and financial toll that comes with a cancer diagnosis is immense and affects not only cancer patients but also families and entire communities. This year alone approximately 600,000 Americans will lose their lives to cancer, and the forecast shows no signs of improving. Recent estimates tell us that 41 percent of all Americans will be diagnosed with cancer during their lifetimes and 21 percent of the population will lose their lives to this devastating disease. Cancer has evolved into a national crisis that touches each and every one of us. The vast majority of individuals who lose the battle against cancer are treated with the standard orthodox therapy. These people may never have questioned their oncologists, believing that they were in the best possible hands with their physicians' advanced education, knowledge of latest treatments, and all the tools of modern research at their disposal. In this groundbreaking book, Gary Null debunks the commonly accepted belief that drugs and chemotherapy are the only cures for cancer and explores the alternative treatments that most mainstream doctors will never discuss with their patients. Dr. Null asserts that there are foods and supplements that boost the body's immune system and can actually prevent and reverse cancer. Did you know that eating lemons and melons can help balance your body's pH, which will help prevent and treat cancer? You knew that fiber is important for a healthy diet, but did you know that it lowers the risk of breast, colorectal, uterine, and prostate cancers? Have you heard of maitake mushrooms, which kill cancer cells by enhancing the activity of T-helper cells? In addition to diet, Dr. Null discusses important supplements and herbs and cutting-edge therapies you may never have heard of. With twenty-five cancer-fighting recipes and testimonials from individuals who have found health through Dr. Null's methods, this book could save your life.

They have their animal body language down to a science and usually manage to actually convince us that they are starving and must be scrapped! All that schmoozing ability makes you want to share with them a taste of everything you eat. But owner beware! Giving in to those eyes, the act and surrendering the human foods over to our dog(s) can actually seriously harm or even kill them. Just how much or what quantity of various types of human food items can sicken or kill your dog is different between various breeds and their likewise different weights. Some really surprising details are provided in this book and are documented to advise you on what foods cause toxic conditions in your dog. Additionally, the various symptoms you should be on the lookout for. According to statistics in 2007, the ASPCA's Animal Poison Control Center received more than 130,000 emergency calls. Most of the reported cases of animal toxic poisoning were caused by common human foods and household items. Some of the more common signs of poisoning include vomiting and diarrhea, muscle tremors or seizures, drooling, redness of skin, ears and eyes and swelling and/or bleeding. It cannot be emphasized enough that the many foods we like can be dangerous to animals. As hard as it is to do, it's actually best to stick to pet food and the diets recommended by your veterinarian. Yet regardless of all the precautions we take to keep our pet pals safe, accidents can and do happen. It is because of the sad reality that the ASPCA, Humane Society and animal advocates advise pet owners to keep the telephone numbers of their local veterinarian and the ASPCA Animal Poison Control Center — (888) 426-4435 — in a prominent easily retrievable location. That being said, even if you only suspect your pet has inhaled, consumed, or come in contact with some kind of toxic substance, stay calm, cool and collect and call for assistance immediately. If you discover your pet consuming anything you think might be toxic, to be safe seek emergency help immediately. This should be your cut in stone precautionary action even if she or he is not exhibiting any of the common signs or symptoms previously mentioned. Better to be safe than sorry is the norm for family and we should be just as cautious about our pets too. Wouldn't you think?

list of toxic foods for dogs pdf: Toxic Foods Kevin R. Sweeter, 2017-09-19 Unbeknownst to most people, the very foods that we eat are either produced with, or include ingredients that are known to be toxic, poisonous, and harmful. Yet even with oversights such as the FDA, these substances make it into the foods we depend upon for life. This is a comprehensive list of such ingredients, practices, and means of how they are in the foods we eat, and some alternatives for us to help avoid them entirely. Many of these are included deliberately in our foods under the guise of being a safe and healthy alternative to certain foods and ingredients otherwise harmful to us, like sugar. However, these tend to be far worse than the ingredients they propose to replace as a healthier substitute. Please read the ingredient labels on foods you are purchasing. Refrain from anything processed. Be very wary of foods labeled 'diet', or low calorie, and even fat-free. Make educated food purchases, be a smart consumer, and make yourself aware of the deception of these ingredients, and how they can harm you and your children, and pets. Demand better oversight and accountability of food processing, and labeling of potentially harmful ingredients. Demand independent oversight and testing of foods, and not allow such research to be left to the manufacturers themselves, or by paid-off agencies that are no more interested in your food safety than those who are responsible for using these ingredients in the first place.
