ethics for behavior analysts 4th edition pdf: The Performance of Socially Responsible Investment Funds in Europe Eva Maria Kreibohm, 2016-11-30 Socially responsible investing (SRI) is an investment approach that combines investors' financial as well as nonfinancial goals in the security selection process. Technically, investors can engage in SRI either by directly investing in companies that implement corporate social activities or by investing their money in SRI funds, which apply screening criteria to select securities. The screening process applied by the SRI funds has led to controversy among academics regarding whether the use of SRI screens in the security selection process influences the financial performance of the funds. The empirical study analyzes whether or not the screening process applied by such funds influences their financial performance. Previous

research mostly has focused on analyzing the performance of SRI equity funds established in the United States. The study at hand not only includes SRI equity funds, but also SRI balanced and fixed income funds established in Europe, the biggest market for SRI globally. The study provides unexpected results that are not only of interest for investors, who want to get a better understanding of the effect on the financial performance of their portfolios in case SRI funds are added. The results are also relevant for SRI fund managers, who are interested in promoting their funds and attracting (new) investors, and for academics, whose research interests are e. g., located in the fields of SRI, fund portfolio performances and market efficiencies.

ethics for behavior analysts 4th edition pdf: Boardroom Behaviour and the Law Samet Caliskan, Pereowei Subai, 2025-03-28 This book examines how various areas of law collectively influence the relationship between a company and its directors, particularly in safeguarding the long-term interests of stakeholders. Directors' inappropriate actions can expose a company to significant corporate risks, particularly in relation to regulatory violations such as breaches of competition law. When directors engage in such misconduct, company law and corporate governance provide certain control mechanisms that allow the company to manage these risks. Additionally, directors can be discouraged from engaging in such behaviour by the threat of being held accountable for violations of competition law. This book evaluates various tools designed to regulate directors' behaviours and ensure accountability, questioning whether the legal frameworks strike the right balance between corporate liability and personal accountability. It argues that these mechanisms do not sufficiently protect the long-term interests of stakeholders and that shortcomings in the law leave companies vulnerable to directors' misconduct, which cannot be adequately addressed through traditional risk management strategies. This book will be of interest to researchers in the field of corporate law, competition law, and corporate governance.
