Montoya, 2018-09-15 *Silencing Gender, Age, Ethnicity and Cultural Biases in Leadership* is an edited volume containing eight chapters, each a real-life account from a Latina in a leadership position in the United States. These women discuss how their professional goals may conflict with their culture's expectations for them, and they describe the complexity of life choices for Latinas in the workplace, including their struggles in challenging such social assumptions. Although some of the contributors come from Latin American countries and others were born in the United States, all eight women share similar backgrounds in regards to gender,

age, ethnicity, or other forms of cultural biases they have encountered in both their professional and social experiences. The theme presented in this book is extremely relevant to the modern workplace—not only where men and women of different ages, ethnic, and religious backgrounds come together, attempting to be effective in their professional setting, but also where biases that try to silence minorities still prevail. psychology of gender 6th edition pdf free: Cultural Psychology in Communities Floor van Alphen, Susanne Normann, 2020-08-01 This volume aims at further articulating and developing the cultural psychological interest in community. It focuses on the processes through which individuals constitute communities and the processes that restrain or enable moving forward with others. This interest is necessary especially now that the world is on the move. Economic crises, political crises and ecological crises have led to reinforced migration patterns, a rise in authoritarianism and xenophobia, and have become a threat to the survival of the world as we know it, particularly to minorities and indigenous communities. At the same time, we are witnessing the birth of new networks, dialogues and actions, generated by people within, between and among communities. Therefore, this volume collects interdisciplinary theoretical, empirical and applied contributions enabling engagement with communities in cultural psychology. This involves both reflections on meaning-making processes and projections on how they feed into social transformation, in exchange with community psychology, anthropology and sociology. People vitally depend on community to effectively negotiate or resist in complex intercultural or intergroup settings. In the wake of human rights violations or to prevent further damage to the environment a community is needed to undertake action. From feminist movements and disability activism to the otherwise marginalized: how do people constitute communities? How do they resist as a community? How can cultural psychology contribute not only to understand meaning-making processes, but also connect them to processes of social transformation? Migration, moving through and connecting to different communities can affect meaning making in significant ways. People consider themselves as members of one or another community, but they also increasingly enter into new settings of social practice with new means for action. How might creative meaning-making build bridges between communities? How might new community arise in between or with others? How can cultural psychology deal with intercultural processes without reifying different cultures? These are the central questions that the, mostly emerging, scholars from many corners of the world address in this book. Their research addresses different institutional settings that are resisted and transformed from within, in dialogue with others. From social work, NGOs and municipal activity to university talent mobility and art projects for youth. Other settings are newly inhabited, from the public square and the social media to a foreign city and neighborhood church. Thus, more communities appear on the map of cultural psychology.

psychology of gender 6th edition pdf free: Serial and Mass Murder Elizabeth A. Gurian, 2021-09-30 This book reframes the study of multicide (that is, serial and mass murder) to use objective measures, and aims to expand our understanding of multicide offending through descriptive and inferential statistical analyses of different homicide patterns of the offenders. Criminal homicide and multiple murders are rare occurrences that typically account for a very small percentage of all violent crimes in most countries. Despite this low occurrence, homicide continues to be an area of intense study, with a focus on subjective measures and classifications. The research and analysis based on a database of over 1,300 cases contributes to the criminological study of violence and draws distinctions between the types of offenders (partnered and solo, serial and mass, male and female, etc.) from a range of different countries and across decades. Traditionally, studies of homicide focus on male offenders and theories of offending are then applied to females and co-offenders. The research presented in this book reveals that women and partnered offenders have very different homicide patterns from men. Looking at the history of multicide offending, this book uses descriptive and inferential statistical analyses to directly compare differences in offending and outcome patterns across multicide offender types. This exploration of the multidimensionality of homicide at an international level is useful for scholars and students interested in criminal justice,

criminology, psychology, sociology, or law.
