the curious researcher pdf: A Guide to Becoming a Scholarly Practitioner in Student Affairs Lisa J. Hatfield, Vicki L. Wise, 2023-07-03 Student affairs professionals are increasingly being called upon to become scholar practitioners, to reflect on and share their experiences to further the knowledge of the field, and to disseminate practices to promote student learning and development. This book offers practical guidance to anyone in the field interested in presenting at conferences or publishing in scholarly and professional journals, and sets the work of scholarly practice in the context of its vital role of influencing and shaping the future of student affairs, and in promoting continuous learning. The authors demystify the processes of producing research and scholarly work; address motivation and barriers such as time-constraints or confidence; and provide advice on developing ideas, writing, getting feedback, staying on task, identifying the appropriate outlets and venues for ideas, submitting proposals, as well as on speaking and presentation skills. It also directs readers to books and online resources and presents the reflections of senior student affairs officers on scholarship in the profession. As the authors state, student affairs professionals are often in the best position to test the myths about what really works for college students to have access, persist, and graduate. Through their daily interactions with students they develop the grounding for theories and strategies to improve the college experience, none of which can be advanced without scholarship, without presenting and writing, and the debate that they stimulate. This book is intended for student affairs professionals at all levels. It sets the context for those starting their careers as they navigate and understand their new roles; aims to inspire

mid-level professionals to present or write about their experiences and contributions; and offers senior administrators strategies to pursue their own scholarship while creating a supportive environment for their staff to do so, and develop their agency and professional growth in the process.

the curious researcher pdf: *First Time Up* Brock Dethier, 2008-09-30 First time up?—an insider's friendly question from 1960s counter-culture—perfectly captures the spirit of this book. A short, supportive, practical guide for the first-time college composition instructor, the book is upbeat, wise but friendly, casual but knowledgeable (like the voice that may have introduced you to certain other firsts). With an experiential focus rather than a theoretical one, *First Time Up* will be a strong addition to the newcomer's professional library, and a great candidate for the TA practicum reading list. Dethier, author of *The Composition Instructor's Survival Guide* and *From Dylan to Donne*, directly addresses the common headaches, nightmares, and epiphanies of composition teaching—especially the ones that face the new teacher. And since legions of new college composition teachers are either graduate instructors (TAs) or adjuncts without a formal background

in composition studies, he assumes these folks as his primary audience. Dethier's voice is casual, but it conveys concern, humor, experience, and reassurance to the first-timer. He addresses all major areas that graduate instructors or new adjuncts in a writing program are sure to face, from career anxiety to thoughts on grading and keeping good classroom records. Dethier's own eclecticism is well-represented here, but he reviews with considerable deftness the value of contemporary scholarship to first-time writing instructors—many of whom will be impatient with high theory. Throughout the work, he affirms a humane, confident approach to teaching, along with a true affection for college students and for teachers just learning to deal with them.

Section Two presents strategies for enhancing the research writing skills of undergraduate students. Finally, Section Three examines specific research contexts, including service learning projects, science lab/ fieldwork, internships, portfolios, and visual arts inquiry. Adult educational theory is woven throughout the text, along with international perspectives.

the curious researcher pdf: Rethinking Information Literacy Jane Secker, Emma Coonan, 2012-12-23 A vision for the future of information literacy teaching. Based on groundbreaking research, undertaken by the authors as part of the prestigious Arcadia Programme at Cambridge University, this book presents a new and dynamic information literacy curriculum developed for the 21st century information professional. It seeks to address in a modular, flexible and holistic way the developing information needs of students entering higher education over the next five years. The book is organized around the ten strands of the new curriculum, which cover the whole landscape of information literacy development required to succeed as an undergraduate in higher education. Interweaving the authors' research and the reflections of internationally recognized experts from the library, education and information literacy sectors, including Moira Bent, Andy Priestner, Sarah Pavey, Geoff Walton and Elizabeth Tilley, it illustrates how and why this new curriculum will work in practice. Detailed appendices present the curriculum, lesson plans and tools for institutional audit, giving readers all the tools they need to implement it successfully in their institutions.

the curious researcher pdf: The matter of economic evaluations in health policy

decision-making: The case of the Swedish national guidelines for heart diseases Nathalie

Eckard, 2015-09-11 Economic evaluations are used to inform decision makers about the efficient allocation of scarce healthcare resources and are generated with the direct intent to support decisions in healthcare. Producing guidelines is a complex process and the inclusion of health-economic aspects in the formulation of the Swedish national guidelines as a basis for the written recommendations (priority gradings), distinguishes them from their European counterparts. Despite the increased use of cost-effectiveness data in decision-making, little is known about the actual use of such data. This thesis covers issues concerning how economic evaluations matter in health policy decision-making. The thesis includes four papers based on the Swedish national guidelines for heart diseases, one of the most prominent examples in Sweden of following the notion of evidence-based policy (EBP), in order to inform explicit priority setting. Both Papers I and II followed a qualitative case study design, based on the same data set. Paper I explored how a specific working group, the Priority Setting Group (PSG), handled the various forms of evidence and values when producing the national guidelines. Two themes were identified in reaching collective agreement in priority gradings; group facilitation activities and avoiding deadlock in the discussion. The work process involved disagreement and negotiation as part of that task. Paper I contributes to the theoretical and practical debate on EBP. Paper II focused on the use of cost-effectiveness data as decision support in the PSG work process. The paper addressed availability of cost-effectiveness data, evidence understanding, interpretation difficulties, and the reliance on evidence. Three themes were identified. The paper contributes to knowledge on how cost-effectiveness evidence was used in actual decision-making. The use of cost-effectiveness evidence was one of many tools employed to avoid deadlock in discussion and to reach a priority grading, when the overall evidence base was weak, in times of uncertainty and on the introduction of new expensive medical technologies. Quantitative research methods were used for both Papers III and IV. Paper III explored how the PSG was presented with cost-effectiveness evidence as decision support and as a basis for their priority gradings. Cost-effectiveness ratios (ICERs) were provided, based on a systematic literature review, as well as how the results may be conveyed and communicated, for the treatment of heart diseases

using a cost-effectiveness ranking or league and providing valid information within a limited space, aiding decision makers on the allocation of healthcare resources. The thesis also includes decision support in the form of cost-effectiveness analysis on catheter ablation treatment. Paper IV provides an example of presenting evidence in the form of a decision-analytic model. The modelling approach provides an analytic framework for decision-making, specifically under conditions of uncertainty as in the introduction of new medical technology. Catheter ablation was associated with reduced cost and an incremental gain in quality adjusted life years (QALYs), and was considered a cost-effective treatment strategy compared to the medical treatment strategy in a lifetime perspective.
