crossing the mangrove pdf: *Haiti and the Haitian Diaspora in the Wider Caribbean* Philippe Zacaïr, 2010-04-18 During the past ten years, political debates, legal disputes, and rising violence associated with the presence of Haitian migrants have flared up throughout the Caribbean basin in such places as Guadeloupe, the Dominican Republic, French Guiana, the Bahamas, and Jamaica. The contributors to this volume explore the common thread of prejudice against the Haitian diaspora as well as its potential role in the construction of national narratives from a comparative and interdisciplinary perspective. These essays, written by historians, anthropologists, sociologists, and Francophone studies scholars, examine how Haitians interact as an immigrant group with other parts of the Caribbean as well as how they are perceived and treated, particularly in terms of ethnicity and race, in their migration experience in the broader Caribbean. By discussing the prevalence of anti-Haitianism throughout the region alongside the challenges Haitians face as immigrants, this volume completes the global view of the Haitian diaspora saga.

crossing the mangrove pdf: Practices in Regional Science and Sustainable Regional Development R. B. Singh, Soumendu Chatterjee, Mukunda Mishra, Andrews José de Lucena, 2021-07-12 This book brings together the emerging trends and techniques incorporated in regional science during the first two decades of this millennium. The book includes systematic and analytical notes making scientific commentary on the innovative methods of regional development, measurement of the development, regional development models, and policy measures that have significant implications and wide applicability instrumental for India as well as the other global south countries. There is clear evidence in the global south of the uneven spatial distribution of

resources, economic activities, literacy, and health conditions. The most striking fact is the coexistence of development and underdevelopment that makes the planning process complicated. This can hardly be explored without taking a deep insight into the matter of how the regional parameters are impacting regional society or economy to shape the development of that region. There can be no effective global policy framework that will be effective equally for each and every region to mitigate local issues of society or economy. It is here that the book integrates the efforts of practitioners working towards addressing these regional issues and striving for sustainable regional development through their innovative ideas. Through its contributions, the book addresses development issues, regional impact of climate change, social justice, migration, well-being, livelihood vulnerabilities, and regional urban-environmental issues from the standpoint of regional science. It is a significant resource for researchers of spatial science, and policy makers.

crossing the mangrove pdf: *Buoyancy on the Bayou* Jill Ann. Harrison, 2012-12-15 Over the past several decades, shrimp has transformed from a luxury food to a kitchen staple. While shrimp-loving consumers have benefited from the lower cost of shrimp, domestic shrimp fishers have suffered, particularly in Louisiana. Most of the shrimp that we eat today is imported from shrimp farms in China, Vietnam, and Thailand. The flood of imported shrimp has sent dockside prices plummeting, and rising fuel costs have destroyed the profit margin for shrimp fishing as a domestic industry. In *Buoyancy on the Bayou*, Jill Ann Harrison portrays the struggles that Louisiana shrimp fishers endure to remain afloat in an industry beset by globalization. Her in-depth interviews with more than fifty individuals working in or associated with shrimp fishing in a small town in Louisiana offer a portrait of shrimp fishers' lives just before the BP oil spill in 2010, which helps us better understand what has happened since the Deepwater Horizon disaster. Harrison shows that shrimp fishers go through a careful calculation of noneconomic costs and benefits as they grapple to figure out what their next move will be. Many willingly forgo opportunities in other industries to fulfill what they perceive as their cultural calling. Others reluctantly leave fishing behind for more lucrative work, but they mourn the loss of a livelihood upon which community and family structures are built. In this gripping account of the struggle to survive amid the waves of globalization, Harrison focuses her analysis at the intersection of livelihood, family, and community and casts a bright light upon the cultural importance of the work that we do.

crossing the mangrove pdf: *Reading Contemporary Environmental Justice* R. Sreejith Varma, 2023-07-14 This volume investigates 11 contemporary environmental justice narratives from Kerala, the south-western state in India. Introducing a detailed review of environmental literature in Malayalam, the selected eco-narratives are presented through two key literary genres: life narratives and novels, conveying the socio-environmental pressures, problems, and anxieties of modern, globalising Kerala. This text also entails primary investigations of 'toxic fictions' and 'extractivist fictions,' including Malayalam novels that narrate the disastrous consequences of the permeation of toxic pollutants in human and ecosystemic bodies, and novels that chronicle the impact of exploitative mining activities on the environment. All eco-narratives analysed in the book exhibit the familiar pattern of the Global South environmental narratives, namely, a close imbrication of the ecological and social spheres. *Reading Contemporary Environmental Justice* argues that these selected eco-texts offer inspiring scenarios where the subaltern people show thantedam, or courage, to claim thante idam, one's own space in society and on the Earth. This volume will be essential for those looking to expand their understanding of environmental justice and the harmful effects of development and modernisation.

crossing the mangrove pdf: *Eldercare, Health, and Ecosyndemics in a Perilous World* Janelle Christensen, 2018-10-16 Humans are at a unique crossroads: never before have we had such a clear understanding of how our actions affect a changing climate, or how our settlement patterns along coastal environments put us at risk of rising sea levels. However, the science behind climate change (and solutions for it) are engulfed in political controversy. Dr. Christensen uses anthropological methods to illuminate the lived experience of families caring for elder relatives during climate

related events: a unique conundrum facing increasing numbers of people living in coastal areas. As populations in industrialized countries grow older, they become more vulnerable to climate extremes. People over 65 are more likely to die in climate related events, such as heatwaves, hurricanes, and blizzards. Dr. Christensen presents the scientific evidence for climate change, the archaeological record on how humans responded to climatic shifts in the past, and explains how the current challenges are different. Using the theoretical framework of Singer's Syndemics, she explores how aging bodies are more vulnerable to increased environmental toxins, which is further exacerbated by climate fluctuations. A central question is: how do we value our environment, our elders, and make decisions about well-being throughout the life course?

Water is a recurrent theme in this seventh edition. Each chapter considers water-related environmental changes, together with a number of challenges and opportunities.

crossing the mangrove pdf: *World Heritage and Sustainable Development* Peter Bille Larsen, William Logan, 2018-07-03 In 2015, the General Assembly of State Parties to the World Heritage Convention passed a ground-breaking Sustainable Development policy that seeks to bring the World Heritage system into line with the UN's sustainable development agenda (UNESCO 2015). *World Heritage and Sustainable Development* provides a broad overview of the process that brought about the new policy and the implications of its enactment. The book is divided into four parts. Part I puts the policy in its historical and theoretical context, and Part II offers an analysis of the four policy dimensions on which the policy is based – environmental sustainability, inclusive social development, inclusive economic development and the fostering of peace and security. Part III presents perspectives from IUCN, ICOMOS and ICCROM – the three Advisory Bodies to the World Heritage Committee, and Part IV offers 'case study' perspectives on the practical implications of the policy. Contributions come from a wide range of experienced heritage professionals and practitioners who offer both 'inside' perspectives on the evolution of the policy and 'outside' perspectives on its implications. Combined, they present and analyse the main ideas, debates and implications of the policy change. This book is key reading for all heritage professionals interested in developing a better understanding of the new Sustainable Development policy. It is also essential reading for scholars and students working in the area.
