emperor of maladies pdf: *A World Without Cancer* Margaret I. Cuomo, 2013-10-01 A provocative and surprising investigation into the ways that profit, personalities, and politics obstruct real progress in the war on cancer—and one doctor's passionate call to action for change This year, nearly 1.6 million new cases of cancer will be diagnosed and more than 1,500 people will die per day. We've been asked to accept the disappointing strategy to manage cancer as a chronic disease. We've allowed pharmaceutical companies to position cancer drugs that extend life by just weeks and may cost \$100,000 for a single course of treatment as breakthroughs. Why have we been able to cure and prevent other killer diseases but not most cancers? Where is the bold government leadership that will transform our system from treatment to prevention? Have we forgotten the mission of the National Cancer Act of 1971, to conquer cancer? Through an analysis of over 40 years of medical evidence and interviews with cancer doctors, researchers, drug company executives, and health policy advisors, Dr. Cuomo reveals frank and intriguing answers to these questions. She shows us how all cancer stakeholders—the pharmaceutical industry, government, physicians, and concerned Americans—can change the way we view and fight cancer in this country.

emperor of maladies pdf: *Building Breakthroughs* Raju Prasad, 2022-12-06 From mRNA vaccines to gene therapies, the next frontier of medical innovation is here. In *Building Breakthroughs*, Raju Prasad tells the story of important advancements in biotechnology and medical innovation from gene therapies to mRNA vaccines, providing historical context and examining cutting-edge research. emperor of maladies pdf: *Intellectual Disabilities and Autism: Ethics and Practice* Andria Bianchi, Janet A. Vogt, 2024-08-31 This book meaningfully reflects upon difficult, timely, and debated ethics questions relating to people with intellectual disabilities (IDs) and autistic people. The book challenges now dated perceptions and introduces innovative ideas by leading scholars regarding some of the most complex, controversial, and relevant ethical dilemmas involving these neurodiverse populations. People with IDs and/or those on the autism spectrum continue to experience various forms of oppression and unjust treatment across the globe, despite the UN Convention on the Rights of Persons with Disabilities (CRPD). The collection explores questions such as: Can people with IDs make informed decisions about their medical treatment, living circumstances, and overall life? What are the ethical implications of selective termination of pregnancy based on a gene linked to a condition conferring intellectual impairment? How can we ensure that people with IDs and autistic people are meaningfully included in research? Can people with IDs successfully parent? How can we support the capabilities of neurodiverse populations such that they enjoy the rights afforded by the CRPD? Each contributor critically examines how we can move forward to create a world that understands and respects the rights of every person with ID and/or autism. An indispensable read for bioethicists, ethics students, social justice scholars, and others interested in and working with people with IDs and autistic people.

emperor of maladies pdf: Institutions and Incentives in Regulatory Science Jason Scott Johnston, 2012-04-12 *Institutions and Incentives in Regulatory Science* explores fundamental problems with regulatory science in the environmental and natural resource law field. Each chapter covers a variety of natural resource and regulatory areas, ranging from climate change to endangered species protection and traditional health-based environmental regulation. Regulatory laws and institutions themselves strongly influence the direction of scientific research by creating a system of rewards and penalties for science. As a consequence, regulatory laws or institutions that are designed naively end up incentivizing scientists to generate and then publish only those results that further the substantive regulatory goals preferred by the scientists. By relying so heavily on science to dictate policy, regulatory laws and institutions encourage scientists to use their assessment of the state of the science to further their own preferred scientific and regulatory policy agendas. Additionally, many environmental and natural resource regulatory agencies have been instructed by legislatures to rely heavily upon science in their rulemaking. In areas of rapidly evolving science, regulatory agencies are inevitably looking for scientific consensus prematurely, before the scientific process has worked through competing hypotheses and evidence. The contributors in this volume address how institutions for regulatory science should be designed in light of the inevitable misfit between the political or legal demand for regulatory action and the actual state of evolving scientific knowledge.

emperor of maladies pdf: *Truly Human Enhancement* Nicholas Agar, 2023-09-19 A nuanced discussion of human enhancement that argues for enhancement that does not significantly exceed what is currently possible for human beings. The transformative potential of genetic and cybernetic technologies to enhance human capabilities is most often either rejected on moral and prudential grounds or hailed as the future salvation of humanity. In this book, Nicholas Agar offers a more nuanced view, making a case for moderate human enhancement—improvements to attributes and abilities that do not significantly exceed what is currently possible for human beings. He argues against radical human enhancement, or improvements that greatly exceed current human capabilities. Agar explores notions of transformative change and motives for human enhancement; distinguishes between the instrumental and intrinsic value of enhancements; argues that too much enhancement undermines human identity; considers the possibility of cognitively enhanced

scientists; and argues against radical life extension. Making the case for moderate enhancement, Agar argues that many objections to enhancement are better understood as directed at the degree of enhancement rather than enhancement itself. Moderate human enhancement meets the requirement of truly human enhancement. By radically enhancing human cognitive capabilities, by contrast, we may inadvertently create beings ("post-persons") with moral status higher than that of persons. If we create beings more entitled to benefits and protections against harms than persons, Agar writes, this will be bad news for the unenhanced. Moderate human enhancement offers a more appealing vision of the future and of our relationship to technology.

emperor of maladies pdf: Nonhuman Primate Welfare Lauren M. Robinson, Alexander Weiss, 2023-02-01 This volume reviews the broad topic of welfare in nonhuman primates under human care. Chapters detail the history of primates in captivity, ethical and legal issues surrounding the use of nonhuman primates as entertainment or in research, the different approaches that welfare are measured, and how housing, enrichment, and other conditions can foster or degrade welfare. Since humans began keeping nonhuman primates we have made vast strides in understanding their cognitive abilities, strong social bonds, vibrant personalities, and their capacity for joy and suffering. With an increasing number of countries banning the use of great apes in biomedical research, the welfare of primates in zoos and research facilities has gained increasing attention. This interdisciplinary work features contributors from many of the fields involved and those on both sides of the issue, thus providing an exhaustive overview of primate welfare. Readers from animal welfare science, primatology, animal testing, veterinary medicine, conservation to ethics and legislation will find this an important account.

emperor of maladies pdf: Cancer and Young Adult Literature Stephen M. Zimmerly, 2024-12-20 This collection specifically and solely focuses on Young Adult literature texts where cancer plays a prominent role, including widely-read texts like John Green's *The Fault in Our Stars*, Nicholas Sparks' *A Walk to Remember*, and Jesse Andrews' *Me and Earl and the Dying Girl*. The chapters present a variety of arguments, each developing a novel investigation into how these stories explore the effects cancer has on a person, a family, or on a relationship. As scientific studies continue to develop new understandings of the biology behind cancer, and new sociological studies continue to uncover how a cancer diagnosis impacts the fabric of our culture(s), these collected essays continue to investigate how authors have woven cancer into the stories we write for young people. A number of distinct avenues are taken here, arguing for new approaches in crafting narrative, deeper appreciation for family support networks (or their absence), and what literary criticism can uncover when applied to cancer narratives.

emperor of maladies pdf: Multiple Perspectives on the Study of Life Lema Habash, Nicolas, Chirolla Ospina, Gustavo, 2024-03-30 The infinite multiplicity of existing life forms calls for equally multiple approaches to studying the living. However, no approach will ever be capable of exhausting the various perspectives required for research on life. This impossibility is not only given by the unmanageable task of establishing an infinitely multidisciplinary approach but also by the diverse and ever-changing subject matters that can potentially fall under the category of the living. This book is nevertheless an effort in that direction: acknowledging a multiplicity of ways in which life forms may be studied, and a diversity of disciplinary perspectives suited for this task.

emperor of maladies pdf: *Precision Oncology and Cancer Biomarkers* Anne Bremer, Roger Strand, 2022-03-29 This open access book reflects on matters of social and ethical concern raised in the daily practices of those working in and around precision oncology. Each chapter addresses the experiences, concerns and issues at stake for people who work in settings where precision oncology is practiced, enacted, imagined or discussed. It subsequently discusses and analyses bioethical dilemmas, scientific challenges and economic trade-offs, the need for new policies, further technological innovation, social work, as well as phenomenological research. This volume takes a broad actor-centred perspective as, whenever cancer is present, the range of actors with issues at stake appears almost unlimited. This perspective and approach opens up the possibility for further in-depth and diverse questions, posed by the actors themselves, such as: How are cancer researchers navigating biological uncertainties? How do clinicians and policy-makers address ethical dilemmas around prioritisation of care? What are the patients' experiences with, and hopes for, precision oncology? How do policy-makers and entrepreneurs envisage precision oncology? These questions are of great interest to a broad audience, including cancer researchers, oncologists, policy-makers, medical ethicists and philosophers, social scientists, patients and health economists.

emperor of maladies pdf: Opium John H. Halpern, David Blstein, 2019-08-13 From a psychiatrist on the frontlines of addiction medicine and an expert on the history of drug use comes the authoritative, engaging, and accessible history of the flower that helped to build (Booklist) -- and now threatens -- modern society. Opioid addiction is fast becoming the most deadly crisis in American history. In 2018, it claimed nearly fifty thousand lives -- more than gunshots and car crashes combined, and almost as many Americans as were killed in the entire Vietnam War. But even as the overdose crisis ravages our nation -- straining our prison system, dividing families, and defying virtually every legislative solution to treat it -- few understand how it came to be. Opium tells the fascinating (Lit Hub) and at times harrowing tale of how we arrived at today's crisis, making timely and startling connections among painkillers, politics, finance, and society (Laurence Bergreen). The story begins with the discovery of poppy artifacts in ancient Mesopotamia, and goes on to explore how Greek physicians and obscure chemists discovered opium's effects and refined its power, how colonial empires marketed it around the world, and eventually how international drug companies developed a range of powerful synthetic opioids that led to an epidemic of addiction. Throughout, Dr. John Halpern and David Blstein reveal the fascinating role that opium has played in building our modern world, from trade networks to medical protocols to drug enforcement policies. Most importantly, they disentangle how crucial misjudgments, patterns of greed, and racial stereotypes served to transform one of nature's most effective painkillers into a source of unspeakable pain -- and how, using the insights of history, state-of-the-art science, and a compassionate approach to the illness of addiction, we can overcome today's overdose epidemic. This urgent and masterfully woven narrative tells an epic story of how one beautiful flower became the fascination of leaders, tycoons, and nations through the centuries and in their hands exposed the fragility of our civilization. An NPR Best Book of the Year A landmark project. -- Dr. Andrew Weil Engrossing and highly readable. -- Sam Quinones An astonishing journey through time and space. -- Julie Holland, MD The most important, provocative, and challenging book I've read in a long time. -- Laurence Bergreen
