how to blow up a pipeline pdf: From Despotism to Democracy Torbjörn Tännsjö, 2023-09-14 This book is about how best to respond to existential global threats posed by war and global heating. The stakes have become existential. A strong claim in the book is that we need a world state to save humanity. The book sheds new light on why this is so. The present author has long advocated global democracy. A strong argument against global democracy has been, however, that no state has ever been established without the resort to violence. In this book, the author bites the bullet and advocates a route to global democracy that passes through a phase where a global state is established in the form of global despotism. First despotism, then democracy! But, as the author insists and the reader will find, this is at most something we can hope for. We may fail. The moral importance of failure is thoroughly discussed. The book explored the following topics: · The tragedy of the commons is presented as the best explanation of why we do so little to obviate the causes behind climate change. · A world government presents a way out of the tragedy of the commons. · Standard arguments against a world state are examined. · The question of whether it matters if humanity goes extinct is taken seriously. · What if the attempt to establish a world state fails. The book is written by a philosopher, but the intended audience is broad. It has a place in courses in political philosophy, but it is possible for anyone who wants to do so to dig deeper into the questions should be able to read it. And regardless of whether you who read the book are a scholar or a layperson, there is no way for you to avoid its topic. Global existential issues concern all of us, regardless of profession or nationality.

how to blow up a pipeline pdf: Sorry for the Inconvenience But This Is an Emergency Lynne Jones, 2024-03-07 As floods and fires rage across the planet, ever more people are embracing nonviolent action to achieve political change. Can it work? Doctor and aid worker Lynne Jones offers a compelling, ground-level account of the last five years of UK protests, exploring how and why ordinary citizens have adopted extraordinary methods to confront the climate and nature crises. Sharing her 1980s experiences opposing nuclear weapons at Greenham Common, and her journey in movements like Extinction Rebellion today, Jones reflects on public history and her personal story to

unpack nonviolent protest in a world on the brink. Can we learn from past movements? How to communicate with those who disagree? What kind of disruption is most effective in Western democracies? Is property damage nonviolent? Is the law just? How important are direct interventions, boycotts and non-cooperation? What can indigenous campaigners of the Global South teach us? A lifetime of activism has taught Jones that we all have more power than we realise. It's time to use that power—before it's too late.

how to blow up a pipeline pdf: Hope Without Hope Matt Broomfield, 2025-07-25 The militants of Rojava, and the autonomous society they've built, teach us how to kindle hope for the tireless fight against oppression. Drawing on three years living and working in Rojava (Syrian Kurdistan), journalist Matt Broomfield argues the militant Kurdish movement can help the Western left relearn its commitment to hope in hopeless times. The bloodshed and chaos of the Syrian Civil War have paradoxically produced our generation's most significant revolution. Firsthand observations from the heart of Rojava's movement inform Broomfield's critical engagement with its theory and practice and, inevitably, its compromises and contradictions. In the face of crises set to define the coming century—proxy conflict, resource competition, state collapse, climate catastrophe—the Kurdish movement has produced an unexpected, utopian response: an autonomous society organized outside of the nation-state, run by direct democracy and along feminist and ecological principles, surviving despite overwhelming military opposition. The revolutionary movement of Rojava and its people shed light on struggle, strategy, and endurance—how and why to fight for revolution in the face of nearly impossible odds. Hope Without Hope carries on the long tradition of history, absurdist philosophy, and radical thought that has studied how anti-fascist and anti-colonial movements answer defeat and repression with a revolutionary faith in transformation. Only by understanding this history can we pursue the steadfast work of organizing for long-term revolutionary change in our seemingly hopeless age.

how to blow up a pipeline pdf: Make / Believe John Hartley, 2025-01-23 This book illustrates that mediated popular culture and science-based knowledge systems, entangled and compromised as both have become, are still a robust crucible for system change for the future when they combine forces. Planetary crises require responses from everyone. This means that collective action is not simply a scientific or political problem. It is a problem of culture and media. But modern politics, journalism, and science were not designed for global climate action. They've divided humans into competitive and often hostile 'we' and 'they' groups. Identity, news, and knowledge are all weaponized. Culture makes groups, groups make knowledge, and knowledge makes enemies. What can be done to prevent global conflict and the drift to war? Make/Believe turns to popular culture and social media to argue for an alternative storyline. While the Great Powers are making new enemies, emergent 'classes' - led by children - are using planetary connectivity to make new worlds. A digital planet generates new kinds of strategic stories for pan-human action, based on difference, intersectionality, and cooperation for a sustainable Earth system. Make/Believe shows how alternatives to the 'Great Game' of global contestation are gathering strength in unlikely places, among women, children, lifestyle, and pop culture. Popular digital media literacy is now a prerequisite for the remediation of the planet.

how to blow up a pipeline pdf: Meeting the Enemy Kevin J. O'Brien, 2025-02-18 The catastrophic effects of climate change can seem overwhelming. What can we do? Who is responsible? In the tradition of Walter Wink, O'Brien reminds us that Christians have the power to name and oppose the enemies of God's good creation. The fossil fuel industry is just such an enemy. We can courageously confront these powers of evil and build a more faithful future. O'Brien paints the structural evils of the fossil fuel industry in sharp relief, helping readers understand that a Christian climate ethic must move beyond individualistic blame and individualistic solutions. While we bear responsibility for our personal actions, O'Brien demonstrates that fossil fuel companies are far more to blame for the contemporary climate crisis. His reframing shows us that the problem is the system. Having fully developed his case for the blame fossil fuel companies bear, O'Brien helps readers consider the options available to us as Christians to bear witness to evil and address the

roots of this system of powers that bind us. O'Brien's approachable and engaging analysis makes *Meeting the Enemy* a powerful resource for both the classroom and informal educational settings.

how to blow up a pipeline pdf: Impasse Roy Scranton, 2025-08-05 A Next Big Idea Club Must Read for August 2025! We need a new realism in the face of global climate catastrophe. Extreme heat, fires, floods, and storms are transforming our planet. Yet instead of serious responses from world leaders, we get increasing emissions, divisive politics, and ersatz solutions that offer more of the same: more capitalism, more complexity, more progress. The impasse we face is not only political and institutional, but cognitive, existential, and narrative. We're incapable of grasping the scale, speed, and impact of global warming. Our brains can't make sense of how radically our world is changing. And we optimistically cling to a civilizational narrative that promises a better tomorrow if we just keep doing what we're doing. It's well past time, Roy Scranton argues, to free ourselves from our dangerous and dogmatic faith in progress. Such unwarranted optimism will only accelerate our collective disintegration. If we want to have any hope at all for the future, it must be grounded in a recognition of human limits—a view Scranton calls ethical pessimism. Drawing from psychology, philosophy, history, and politics, as well as film, literature, and personal experience, Scranton describes the challenges we face in making sense of our predicament, from problems in communication to questions of justice, from the inherent biases in human perception to the difficulties of empirical knowledge. What emerges is a challenging but ultimately hopeful proposition: if we have the courage to accept our limits, we may find a way to embrace our unknowable future.

how to blow up a pipeline pdf: *Minerals Yearbook* Mines Bureau, Geological Survey, Interior Department, 2018-04-19 This edition of the U.S. Geological Survey (USGS) *Minerals Yearbook* discusses the performance of the worldwide minerals and materials industries during year 2013 and provides background information to assist in interpreting that performance. These annual reviews are designed to provide timely statistical data on mineral commodities in various countries. This volume covers data from Asia and the Pacific. Each report includes sections on government policies and programs, environmental issues, trade and production data, industry structure and ownership, commodity sector developments, infrastructure, and a summary outlook. Audience: Government employees and contractors, as well as businesses and employees, all working in mineral-related trades, especially with interests in statistics about mineral commodities overseas, will find this resource invaluable.

how to blow up a pipeline pdf: *The Risk Pivot* Bruce D. Jones, David Steven, 2014-11-21 The last decade has seen a revolution in global energy. First, we saw explosive growth in demand from Asia's rising powers, which fueled fears about scarcity and conflict. But we've also seen an American revolution in technology and markets, resulting in a dramatic increase in supply. This is strengthening America's hand in the world but it's not without complications. There are major security consequences of these shifts. Among the most consequential are China and India, Asia's emerging giants, which are increasingly exposed to political risks associated with energy risks, as well as the energy flows, pivoting to Asia. Meanwhile the great powers struggle to balance their need for fossil fuels with a mounting effort to tackle climate change. The top powers, and the United States above all, face a strategic choice: whether to use energy as a weapon of geopolitics, or as a tool of a stable order. CONTENTS Introduction 1. how to blow up a pipeline pdf: Oceans Rise Empires Fall Gerard Toal, 2024 A powerful explanation of why geopolitical competition makes implementing effective climate change policies so difficult. As the Russia-Ukraine war has shown, great-power competition drives states to prioritize

fossil fuel acquisition over working toward a zero-carbon future. In the last few years, it has become abundantly clear that the effects of accelerating climate change will be catastrophic, from rising seas to more violent storms to desertification. Yet why do nation-states find it so difficult to implement transnational policies that can reduce carbon output and slow global warming? In *Oceans Rise, Empires Fall*, Gerard Toal identifies geopolitics as the culprit. States would prefer to reduce emissions in the abstract, but in the great global competition for geopolitical power, states always prioritize access to carbon-based fuels necessary for generating the sort of economic growth that helps them compete with rival states. Despite what we now know about the long-term impacts of climate change, geopolitical contests continue to sideline attempts to halt or slow down the process. The Ukraine conflict in particular exposes our priorities. To escape reliance on Russia's vast oil and gas reserves, states have expanded fossil fuel production that necessarily increases the amount of carbon in the atmosphere. The territorial control imperatives of great powers preclude collaborative behavior to address common challenges. Competitive territorial, resource, and technological dramas across the geopolitical chessboard currently obscure the deterioration of the planet's life support systems. In the contest between geopolitics and sustainable climate policies, the former takes precedence—especially when competition shifts to outright conflict. In this book, Toal interrogates that relationship and its stakes for the ongoing acceleration of climate change.

how to blow up a pipeline pdf: *Modes of Protest And Resistance* Margaret Betz, 2023-11-28 This book presents a philosophical analysis of the different forms of political resistance and protest. It explores the normative space of resistance that is beyond self-defense and civil disobedience, and proposes the concept of “resistance violence” as a separate and special normative category. Instances that fall under this category can be, accordingly justified, even if they prove to be practically ineffective, by appealing to their role in preserving or upholding the dignity of the resisters or those who they aim to protect. Margaret Betz draws from important and interesting historical examples to establish the concept, and proposes to apply it to better understand contemporary struggles against injustice.

how to blow up a pipeline pdf: *The Handbook of Organizing Economic, Ecological and Societal Transformation* Elke Weik, Chris Land, Ronald Hartz, 2024-08-19 This handbook gathers contributors from different disciplines of the social sciences, such as organization and management studies, sociology, anthropology and political science, to constructively discuss the kinds of transformations we need to see in coming years. These transformations concern the way we work, produce and consume but also the way in which we think about work, production and consumption. In an explicit rejection of the demand that the social sciences provide quick fixes, the contributors of this handbook discuss possible solutions in a critical and comprehensive manner and with an eye to both their environmental and societal implications. The handbook is divided into four parts: Opening up futures, Techno-economic transformations at work, Sustainable environmental transformation, and Radical democratic futures. The handbook is of interest to all critical academics interested in constructive suggestions regarding necessary societal transformations.

how to blow up a pipeline pdf: *The Frankfurt Kabuff Critical Edition* Beth Driscoll, Claire Squires, 2023-09-26 When violence breaks out at the stands of far-right publishers at the Frankfurt Book Fair, Beatrice Deft is provoked into action. An alienated Australian high school teacher who finds herself at the centre of the global book industry, Beatrice encounters a cast of characters including the very hot Caspian Schorle (German police officer), Kurt Weidenfeld (left-wing German publisher), and White Storm (a neo-Nazi publishing organisation). Such is the premise of *The Frankfurt Kabuff*, a comic erotic thriller about the publishing industry originally self-published under the pseudonym Blaire Squiscoll. With *The Frankfurt Kabuff Critical Edition*, Blaire Squiscoll is revealed as the pen name of Beth Driscoll and Claire Squires, who created the novella in the midst of fieldwork at the Frankfurt Book Fair. Published for the first time as a full critical edition, this experimental, playful work combines critical and creative modes for new perspectives on the publishing industry and creative economies. *The Frankfurt Kabuff Critical Edition* enriches the

novella with an introduction, annotated text, 15 essays by leading scholars and practitioners, and additional creative assemblages. This highly unusual research project offers insights for students, academics and publishers alike.

how to blow up a pipeline pdf: *Fighting Global Neo-Extractivism* Jasper Finkeldey, 2022-08-02 *Fighting Global Neo-Extractivism: Fossil-Free Social Movements in South Africa* analyzes social struggles over damaging new fossil fuel projects in the Global South with a focus on South Africa, Africa's biggest fossil fuel emitter. Fossil fuel extraction in South Africa has reached a new accelerated phase in which the fossil fuel frontier is moving beyond historical 'sacrifice zones' into non-traditional spaces, such as conservation parks and middle-class neighbourhoods, and provoking fervent opposition from grassroots activists. This book examines campaigns such as Frack Free South Africa and Save our iMfolozi Wilderness, viewing them as struggles against neo-extractivism driven by the state and industry. Through a series of detailed case studies, it highlights the shaping of mobilisation patterns by prior land use practices and the capacity to mobilize different social groups across race and class. Developing the notion of the fossil fuel frontier as the material and political boundary that activists in South Africa and elsewhere in the world render visible, this volume provides a theoretical framework to understanding global mobilization patterns. This timely and impassioned book will appeal to students and researchers interested in a range of subjects, including environmentalism, social movements, political ecology, and development studies.

how to blow up a pipeline pdf: *Narratives of Hope and Despair* Johanna M. Wagner, Melanie Duckworth, Deanna Benjamin, 2025-10-14 In narratives of literature and cultural production, hope and despair remain fundamental in exploring our world. In recent years, political polarization, the Covid pandemic, global warming, and new and ongoing wars have contributed to global crises, to which despair is an understandable response. Yet hope is continually sought and proclaimed. By examining tropes of ruin and regeneration in a wide selection of narratives including memoir, graphic narratives, fiction, film, art, radio plays, culture, rhetoric, and discourse, the book uncovers resonances between them. The anthology moves from the personal to the collective, addressing individual matters of the body and the mind, societal visions of utopia and dystopia, and, finally, hope and despair for the earth itself in representations of apocalypse and the Anthropocene. This structure, alongside the interdisciplinary nature of the project, maps dynamic international perspectives in which hope and despair flow across and through personal, social, and earthly concerns.

how to blow up a pipeline pdf: *Negotiating Climate Change in Crisis* Steffen Böhm, Sian Sullivan, 2021-09-28 Climate change negotiations have failed the world. Despite more than thirty years of high-level, global talks on climate change, we are still seeing carbon emissions rise dramatically. This edited volume, comprising leading and emerging scholars and climate activists from around the world, takes a critical look at what has gone wrong and what is to be done to create more decisive action. Composed of twenty-eight essays—a combination of new and republished texts—the anthology is organised around seven main themes: paradigms; what counts?; extraction; dispatches from a climate change frontline country; governance; finance; and action(s). Through this multifaceted approach, the contributors ask pressing questions about how we conceptualise and respond to the climate crisis, providing both 'big picture' perspectives and more focussed case studies. This unique and extensive collection will be of great value to environmental and social scientists alike, as well as to the general reader interested in understanding current views on the climate crisis.

how to blow up a pipeline pdf: *The Activist Humanist* Caroline Levine, 2023-10-17 An argument that humanists have the tools—and the responsibility—to mobilize political power to tackle climate change As climate catastrophes intensify, why do literary and cultural studies scholars so often remain committed to the separation of aesthetic study from the nitty-gritty of political change? In this thought-provoking book, Caroline Levine makes the case for an alternative view, arguing that humanists have the tools to mobilize political power—and the responsibility to use those tools to avert the worst impacts of global warming. Building on the theory developed in her award-winning

book, *Forms*, Levine shows how formalist methods can be used in the fight for climate justice. Countering scholars in the environmental humanities who embrace only “modest gestures of care”—and who seem to have moved directly to “mourning” our inevitable environmental losses—Levine argues that large-scale, practical environmental activism should be integral to humanists’ work. She identifies three major infrastructural forms crucial to sustaining collective life: routines, pathways, and enclosures. Crisscrossing between art works and public works—from urban transportation to television series and from food security programs to rhyming couplets—she considers which forms might support stability and predictability in the face of growing precarity. Finally, bridging the gap between academic and practical work, Levine offers a series of questions and exercises intended to guide readers into political action. *The Activist Humanist* provides an essential handbook for prospective activist-scholars.

how to blow up a pipeline pdf: To Be A Water Protector Winona LaDuke, 2020-12-01T00:00:00Z Winona LaDuke is a leader in cultural-based sustainable development strategies, renewable energy, sustainable food systems and Indigenous rights. Her new book, *To Be a Water Protector: Rise of the Wiindigoo Slayers*, is an expansive, provocative engagement with issues that have been central to her many years of activism. LaDuke honours Mother Earth and her teachings while detailing global, Indigenous-led opposition to the enslavement and exploitation of the land and water. She discusses several elements of a New Green Economy and outlines the lessons we can take from activists outside the US and Canada. In her unique way of storytelling, Winona LaDuke is inspiring, always a teacher and an utterly fearless activist, writer and speaker. Winona LaDuke is an Anishinaabekwe (Ojibwe) enrolled member of the Mississippi Band Anishinaabeg who lives and works on the White Earth Reservation in Northern Minnesota. She is executive director of Honor the Earth, a national Native advocacy and environmental organization. Her work at the White Earth Land Recovery Project spans thirty years of legal, policy and community development work, including the creation of one of the first tribal land trusts in the country. LaDuke has testified at the United Nations, US Congress and state hearings and is an expert witness on economics and the environment. She is the author of numerous acclaimed articles and books.

how to blow up a pipeline pdf: Universities in Crisis Eric Lybeck, Catherine O'Connell, 2023-01-26 This book goes beyond now-familiar analyses of 'neoliberal governmentality' which tend to characterise academics as passive subjects or as 'strategic actors', drawing on and cynically exploiting metrics as a form of capital exchangeable across different fields. Instead, *Universities in Crisis* draws on newer paradigms by drawing on processual, post-critical and phenomenological approaches that leave room for new spaces of negotiation – discursive and practical – for understanding and advancing academic professionalism in this rapidly changing context. Contributors reflect various manifestations of the changing political and public climate, as well as the unease that surrounds contemporary debates which position the academy in troubling ways. Unifying concepts such as academic work, jurisdiction and transdisciplinarity are deployed to transcend functional divisions within and between academics, administrators, managers and students. Drawing on these theoretical and conceptual resources, contributors engage in critical consideration of whether the potential for 'push back' lies both in re-emphasising the specialness of academic professionalism and in defining the commonalities with other professional groups of knowledge workers. The book offers an unflinching analysis on the conditions which frame the darker side of professionalism and which are associated with increased precarity and reduced autonomy. The contributors explore the dilemmas, challenges and possibilities of professionalism for both early career academics and senior academic leaders.
