interior design basics pdf: InTerior Design - Exposé Håkan Gulliksson, The home is under siege both because it is an enormous potential market and because of changing human behaviours. It is also interesting as a platform for new technology and for analysis of everyday life, as in this essay. We will describe the home as a context where the interactors are humans (inhabitants), things (artefacts in the home), and information. The interactions at home are activities and routines. This essay presents and structures thoughts on the organization, use and decoration of the home, discussing a particular home. The text continues the exploration of interior design started in "InTerior design - Konvolute" (Gulliksson web). It is also yet another piece in a puzzle to understand information technology in the future everyday life. The next chapters will introduce the floor plan of the ground floor @Lummerstigen 12 which will be our reference in the discussions that follows. The point of view is limited to western middle class and much of the discussion will be further constrained by a typical family house @Lummerstigen 12 in Sweden where a pair of middle aged parents live with 3 children in their late teens. Further characterization will be described where it applies in the discussions. After the floor plan has been introduced we will examine some already existing pervasive environments in the home: climate, wiring, lighting and soundscape. We work our way through the hallway, living room and the kitchen. This will in other words be yet another tour of a home and the structure of it will roughly follow the one used by Abercombie, i.e. discussing rooms, enclosings, furniture, decoration and artifacts including technical appliances. Along the tour references to the literature and ideas from research will be given.

interior design basics pdf: Simulating Visitor Behavior Kutay Güler, 2016-02-29 The dynamics of the interplay between the visitor and the exhibition environment form complex circulation patterns. As an exhibition designer, developing an understanding of those dynamics is important for improving visitor satisfaction. However, an overwhelming number of variables may transform the exhibition design process into educated guesswork. Designing through trial and error is just not feasible. In addition, as a result of the nature of creating built environments, modifying decisions later in the design process results in significant costs. The designer has to rely on extensive experience to succeed. Accordingly, implementing a method for guidance into the design process should prove valuable for the designer. This book discusses the development stages of a simulation application for visitor circulation in exhibition environments, and presents the challenges of integrating a complex mathematical process into a visual and artistic process like exhibition design. Those issues include understanding the individual stages of development, building a theoretical foundation, creating a simulation framework, composing individual operations, and implementing the finalized simulation into the design process. Taken together, this process sheds light on the underlying challenges of creating a functioning simulation. The contents of this book will be beneficial not only for exhibition designers and simulation developers, but also anyone interested in visitor behavior and spatial design.
