research paper on alzheimer s disease pdf: *Dementia and Human Rights* Suzanne Cahill, 2018-03-28 The time has come to further challenge biomedical and clinical thinking about dementia, which has for so long underpinned policy and practice. Framing dementia as a disability, this book takes a rights-based approach to expand the debate. Applying a social constructionist lens, it builds on earlier critical perspectives by bringing together concepts including disability, social inclusion, personhood, equality, participation, dignity, empowerment, autonomy and solidarity. Launching the debate into new and exciting territory, the book argues that people living with dementia come within the UN Convention on the Rights of Persons with Disabilities and therefore have full entitlement to all the rights the Convention enshrines. A human rights-based approach has not to date been fully applied to interrogate the lived experience and policy response to dementia. With the fresh analytical tools provided in this book, policy makers and practitioners will gain new insights into how this broader perspective can be used to further promote the quality of life and quality of care for all those affected by dementia.

research paper on alzheimer s disease pdf: *New Models for Managing Longevity Risk* Olivia S. Mitchell, 2022-02-04 This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. Notwithstanding the terrible price the world has paid in the coronavirus pandemic, the fact remains that longevity at older ages is likely to continue to rise in the medium and longer term. This volume explores how the private and public sectors can collaborate via public-private partnerships (PPPs) to develop new mechanisms to reduce older people's risk of outliving their assets in later life. As this volume shows, PPPs typically involve shared government financing alongside private sector partner expertise, management responsibility, and accountability. In addition to offering empirical evidence on examples where this is working well, contributors provide case studies, discuss survey results, and examine a variety of different financial and insurance products to better meet the needs of the aging population. This volume will be informative to researchers, plan sponsors, students, and policymakers seeking to enhance retirement plan offerings.

research paper on alzheimer s disease pdf: *Global Health* Kevin McCracken, David R. Phillips, 2012 The health of human populations around the world is constantly changing and the health profiles of most nations in the early twenty-first century global health landscape are unrecognizable compared with those of just a century ago. This book examines and explains these health changes and considers likely future patterns and changes. While the overall picture charted is one of progress and improvement, certain unfortunate regressions and stubbornly persistent health inequalities are equally shown to be part of the evolving patterns of global health. The chapters of the book are organized in three major parts: The first part introduces readers to the principal concepts of global health, and to the idea of populations having distinctive health profiles. In particular, it explores how those profiles can be measured, and how they change, using the umbrella concepts and theories of epidemiological and health transition. Building on the first section, the second part focuses on the evolution of health states, as well as paying particular attention to the reasons for the many subnational inequalities in global health. It also examines health challenges such as the continuing infectious disease burden and current emerging 'epidemics'. The final part

transports readers from the current health scene to future possible and probable health scenarios, acknowledging the challenges presented by global environmental change, as well as issues centred around geopolitics and human security. Using clear and original explanations of complex issues, this text makes extensive use of boxed case studies and international examples, with thought-provoking discussion questions posed for readers at the end of each chapter. Global Health is essential reading for students of global health, public health and development studies.

research paper on alzheimer s disease pdf: Routledge Handbook of Global Mental Health Nursing Edilma Yearwood, Vicki Hines-Martin, 2016-09-19 Awarded second place in the 2017 AJN Book of the Year Awards in Psychiatric and Mental Health Nursing. I welcome, at long last, a book on global mental health targeted to nurses, the front-line health worker for billions of people around the world. The roles that nurses can, and should, play in mental health care are diverse and this book addresses both well-trod as well as emerging concerns across the continuum of care from promotion to prevention to treatment. Importantly, at the heart of this diversity is the foundation of compassion and care, the hallmark of the nursing profession. – Vikram Patel, Professor of International Mental Health and Wellcome Trust Principal Research Fellow in Clinical Science, Centre for Global Mental Health, London School of Hygiene and Tropical Medicine, UK Psychiatric disorders have consistently been identified as serious and significant global burdens of disease, yet meeting the needs of people in mental distress has not often been a priority in health care. This important reference work sets out the knowledge base for understanding the state of mental health care globally, and translating that into effective practice. The Handbook provides a historical and contemporary context of mental health care, identifies and discusses evidence-based standards of care and strategies for mental health promotion and explores the need to deliver care from interdisciplinary and community-based models, placing these imperatives within a human rights and empowerment framework. It is made up of four core sections which look at: Key and emerging issues that affect global mental health practice and research, including the social context of health; Evidence-based health promotion strategies for major areas of practice internationally; A range of

country studies, reflecting different problems and approaches to mental health and mental health care internationally; and What constitutes empowering practice. The only comprehensive work looking at global perspectives on mental health nursing, this is an invaluable reference for all students, academics and professionals involved in mental health research with an interest in global or cross-cultural issues.

research paper on alzheimer s disease pdf: “Doing things together” Therése Bielsten, 2020-03-13 Background: Most people with dementia live in their own homes, often together with their partners, who become informal caregivers. Relationship quality and sense of couplehood can be threatened as a result of the transition from a mutually interdependent relationship to a caregiver-care-receiver relationship. This, in turn, may lead to many negative consequences for both partners. Support provided for couples is often divided into different types for the person with dementia and for the partner without dementia and lacks couple-based support that targets the relationship, resources and the couple’s everyday life together. Aim: The overall aim of this thesis is to explore couple-centred interventions in dementia and to develop and test a salutogenic, resource-oriented and couple-based intervention among couples in which one partner has dementia living at home. Methods and findings: This thesis comprises three parts: The first part Exploring involves two linked reviews, one narrative review (study I A) and one scoping review (study I B) that aim to identify and describe what previous couple-centred interventions comprised and why they were conducted. The results of the reviews revealed a knowledge gap in and a need for easily accessible support that targets couple relationships, resources and everyday life. The second part Developing (study II) refers to the development of an easily accessible resource-oriented couple-management intervention. The first step was to identify priority topics for such an intervention through a co-researcher process with couples living with dementia. This included a comprehensive literature review, interviews with couples in which one partner has dementia, and consultation meetings with expert groups of people with dementia and partners in both Sweden and the UK. The co-researcher process and the expert meetings informed four main themes with corresponding sub-themes that couples with dementia considered as important to their wellbeing in their everyday lives: (1) Home and Neighbourhood, (2) Meaningful Activities and Relationships, (3) Approach and Empowerment, and (4) Couplehood. The themes were further developed and integrated into the multimedia application DemPower, which was developed for the delivery of the intervention. The third part Testing and Evaluating describes a feasibility study (study III) in which the DemPower application was tested for feasibility and acceptability among couples in Sweden and the UK. The results of the feasibility study indicated that the DemPower intervention was feasible and acceptable among couples in which one partner has dementia living at home. The testing and evaluating part also comprise a qualitative study (study IV) that explores the experiences of engaging with DemPower together as a couple living with dementia in Sweden. The findings resulted in the three themes: (1) Growth of the relationship, (2) We are not alone, and (3) Positive approach, which the couples appreciated and associated with the resource-oriented and salutogenic approach of DemPower. The overall findings of the thesis are presented in a concluding synthesis at the end of the thesis. The concluding synthesis, focused on “Meaningfulness”, “Empowering health promotion”, “Normalization” and “Transitions and couplehood”, represents the core findings of this thesis. What this thesis adds: This thesis contributes to research, healthcare and the public by highlighting the need for a salutogenic approach toward couples living with dementia. The DemPower application, with its focus on couples’ relationships, resource-orientation and everyday life, has proven feasibility and acceptability and has meaningfully addressed a gap in the literature and in practice. As researchers, healthcare professionals and the public, we need to support couples where one partner has dementia to continue to live as normal life as possible. This can best be achieved by focusing on what couples can do, by inclusion and by valuing them as the experts within dementia research and of their life experiences. Bakgrund: Majoriteten av personer med demens bor i sitt eget hem och ofta tillsammans med sin partner som blir en informell vårdgivare. Relationens kvalitet och känsla av parskap hotas ofta till följd av övergången från en ömsesidig beroenderelation

till en vårdgivare-vårdtagar-relation allt eftersom demenssjukdomen fortskrider. Detta kan innebära många negativa konsekvenser. Stöd för par där ena partnern har demens delas ofta upp i olika former för personen med demens och för partnern utan demens, vilket innebär att det saknas parbaserat resursorienterat stöd med inriktning på att främja parrelationen och parets vardagliga liv. Syfte: Syftet med denna avhandling är att utforska parcentrerade interventioner inom demens och att utveckla och testa ett parbaserat, salutogent och resursorienterat stöd för par där ena partnern har en demenssjukdom och som bor tillsammans i det egna hemmet. Metoder och fynd: Denna avhandling består av tre delar. Den första delen att utforska inkluderar två länkade litteraturoversikter, en narrativ översikt och en kartläggande översikt (studie I) som beskriver tidigare interventioner för par som lever med demens och varför de genomförts. Resultaten av översikterna visade ett kunskapsgap i, och ett behov av lättillgängligt stöd som riktar sig till parförhållanden, parens resurser och att främja det vardagliga livet. Den andra delen, att skapa (studie II) involverar utvecklingen av ett lättillgängligt resursorienterat och parbaserat stöd. Det första steget var att identifiera prioriterade ämnen för en sådan intervention tillsammans med par som lever med demens, genom en så kallad medforskarprocess. Detta inkluderade en omfattande litteraturgenomgång, intervjuer med par där ena partnern har demens, och konsultationsmöten med expertgrupper bestående av personer med demens och partners i Sverige och i Storbritannien. Medforskarprocessen och expertmötena resulterade i fyra huvudteman med motsvarande underteman vilka par med demens ansåg vara viktiga för deras relation och för välbefinnande i vardagen: (1) Hem och grannskap, (2) Meningsfulla aktiviteter och relationer, (3) Förhållningssätt och empowerment och (4) Parskap. Dessa teman vidareutvecklades och integrerades i multimedia-applikationen DemPower, som utvecklades i syfte att erbjuda interventionen till par som lever med demens. Den tredje delen att testa och att utvärdera beskriver genomförbarhetsstudien (studie III) där applikationen DemPower testades med avseende på genomförbarhet och acceptabilitet hos par där en partner har demens i Sverige och i Storbritannien. Resultaten av studien visade att DemPower-interventionen var genomförbar och acceptabel bland par där ena partnern har demens. Denna delen av avhandlingen inkluderar även en kvalitativ studie (studie IV) som undersökte parens erfarenheter av att testa DemPower tillsammans som ett par. De samlade upplevelserna resulterade i tre teman: (1) Utveckling av parrelationen, (2) Vi är inte ensamma och (3) Positivt förhållningssätt. De övergripande resultaten från avhandlingen presenteras även i en konkluderande syntes i slutet av avhandlingen. Den konkluderande syntesen med fokus på Meningsfullhet, Empowerment, Normalisering och Parskap representerar kärnan i denna avhandling. Avhandlingens slutsatser och kunskapsbidrag: DemPower-applikationen med fokus på parförhållanden, hälsofrämjande resurser och vardagen har bidragit med ett stöd som vilar på en genuin parbaserad grund tillämpad i det vardagliga livet för par som lever med demens. Denna avhandling bidrar även med kunskap till forskning, vård och allmänheten genom att lyfta fram ett salutogent förhållningssätt till par som lever med demens. Som forskare, vårdpersonal och allmänhet bör vi stödja par där ena partnern har demens för att de ska kunna fortsätta leva ett så normalt liv som möjligt. Detta kan bäst uppnås genom att fokusera på parens resurser, genom inkludering och genom att värdera dem som experter inom demensforskning och i deras livserfarenheter.

research paper on alzheimer s disease pdf: Older African American Women Dorothy Smith-Ruiz, Marcia J. Watson-Vandiver, Debra C. Smith, 2025-03-20 African American women have disproportionately high prevalence, incidence, and mortality rates for most health conditions in comparison to White women. This book will explore some of the reasons for these disparities including problems within the health care system and societal institutions. The disproportionately high number of COVID-19 deaths in the African American population, especially among African American women, have brought renewed attention to historical racial inequality and the role it plays in the daily lives of American women and black families in general. Recommendations incorporate practical implications of this research including identifying social and financial supports unique to older African American women and determining strategies to strengthen the health needs of African American families, which is also paramount to addressing economic, social and racial disparities of this population. Drawing on data from a variety of sources, this book applies a systematic racism and intersectionality approach to how various social, demographic, economic, and health variables influence the outcomes and the overall health status of older African American women. As such, it will appeal to scholars in Sociology, Social Work, Nursing, Gerontology, Social Policy, Racial and Inequality Studies, African American Studies, Justice Studies, Culture, Ethnicity and Health Studies, and Public Health.

research paper on alzheimer s disease pdf: Translational Medicine in CNS Drug Development George G. Nomikos, Douglas E. Feltner, 2019-06-18 Translational Medicine in CNS Drug Development, Volume 29, is the first book of its kind to offer a comprehensive overview of the latest developments in translational medicine and biomarker techniques. With extensive coverage on all aspects of biomarkers and personalized medicine, and numerous chapters devoted to the best strategies for developing drugs that target specific disorders, this book presents an essential reference for researchers in neuroscience and pharmacology who need the most up-to-date techniques for the successful development of drugs to treat central nervous system disorders. Despite increases in the number of individuals suffering from CNS-related disorders, the development and approval of drugs for their treatment have been hampered by inefficiencies in advancing compounds from preclinical discovery to the clinic. However, in the past decades, game-changing strides have been made in our understanding of the pathophysiology of CNS disorders and the relationship of drug exposure in plasma and CNS to pharmacodynamic measures

in both animals and humans. - Includes comprehensive coverage of biomarker tools and the role of personalized medicine in CNS drug development - Discusses strategies for drug development for a full range of CNS indications, with particular attention to neuropsychiatric and neurocognitive disorders - Includes chapters written by international experts from industry and academia
