We are in the process of harming the Earth in ways that will diminish the quality of life for many future generations. Our old human-centrism, our national tribalism, and our short-term perspectives must give way to new ways of thinking that give moral standing to other animals, and that take global and long-term perspectives. In the year 3000, humankind will look back to the present century, which

dramatically altered the planet's climate and ecosystems. Will they curse us as destroyers of the earthly paradise humankind enjoyed until now? To avoid this, we need to change our approach to ethics, economics, sustainability, politics, and law. *Earthling: A New Ethics for the Anthropocene* addresses sustainability, economics, politics, and law as important factors in climate ethics. It aims to both help with understanding these issues, and present potential solutions for the problem.

sustainable development goals united nations pdf: *Educating for Sustainability in a Small Island Nation* Jane Spiteri, 2023-01-19 This volume problematizes the intentions of early childhood education for sustainability (ECEfS) from two new perspectives – the context of small island states and the bi-directional, intergenerational learning about the environment and sustainability that takes place in a variety of contexts, including the family home and school. It questions how belonging to a small island and the children's home influence learning in the early years of life. In doing so, this book offers new insights and new theoretical perspectives into intergenerational environmental learning in the school, family and beyond. Informed by consideration of the most recent literature in early childhood education and sustainability, this volume also looks at how these informal learning spaces provide young children with the opportunities to enhance further learning in the field, thus portraying the fluidity of intergenerational learning from different theoretical standpoints. It provides a deep insight into ECEfS and intergenerational learning about the environment and environmental issues in early childhood education from a perspective of a small island state by adopting a children's rights perspective. It additionally explores the relationship between early childhood theories, children's rights and postcolonial theory.

sustainable development goals united nations pdf: *Defining Effective Transboundary Water Cooperation* Melissa McCracken, 2022-03-30 This book establishes a framework for defining transboundary water cooperation and a methodology for evaluating its effectiveness, which will contribute to more effective and therefore successful cooperation processes. With the increasing focus on transboundary cooperation as a part of the Sustainable Development Goal Framework, there is global recognition of transboundary water cooperation as a tool for improved governance and management of transboundary surface and groundwaters. However, there is not an agreed upon definition of transboundary water cooperation in the literature or in practice. This book develops the Four Frames of Transboundary Water Cooperation, which is a neutral modular framework for developing context-specific explanatory definitions of transboundary water cooperation in basins and aquifers. The Four Frames of Cooperation are legal, institutional, relational, and outcome. However, we need to move beyond defining cooperation to understand better measures of the quality and effectiveness of cooperative processes. The Weighted Model of Effective Cooperation presents a first step in qualitatively evaluating the effectiveness of transboundary water cooperation. This model defines effective transboundary water cooperation and operationalizes a method to evaluate the effectiveness of cooperative processes over internationally shared waters. Effective cooperation emphasizes the relational and outcome frames of cooperation while working towards equitability and sustainability. Together, the Four Frames of Cooperation and the Weighted Model of Effective Cooperation will improve the understanding of cooperation and encourage a detailed evaluation of the quality, success, and effectiveness of cooperative processes. This book will be of great interest to students and scholars of water resource management, water governance, and environmental politics. It will also appeal to policymakers and professionals working in the fields of water conflict, water diplomacy, and international cooperation.
