Plotting $n \times n$ Matrices in MATLAB

Basic Visualization Techniques

Visualizing an $n \times n$ matrix helps to understand its structure, patterns, and properties. MATLAB offers several built-in functions suitable for this purpose:

- `imagesc()`: Scales and displays matrix data as an image with color mapping.
- `heatmap()`: Creates a heat map visualization with interactive features.
- `surf()`: Generates a 3D surface plot of the matrix data.
- `mesh()`: Provides a wireframe 3D plot for matrix visualization.

Example: Plotting a Random Matrix

```
``matlab
n = 10; % Define size of the matrix
A = rand(n); % Generate a random n x n matrix
figure;
imagesc(A);
colorbar;
title('Heatmap of Random  $n \times n$  Matrix');
xlabel('Columns');
ylabel('Rows');
...
```

This example creates a heatmap, providing a visual sense of the matrix's distribution of values.

Developing a Plot Algorithm for $n \times n$ Matrices

Step-by-Step Algorithm Design

To systematically visualize $n \times n$ matrices, especially when dealing with multiple matrices or dynamic data, a robust algorithm is necessary. Below is a generalized approach:

1. Input the matrix data.
2. Determine the visualization type (e.g., heatmap, surface plot).
3. Configure plot parameters such as color maps, axes labels, and titles.
4. Generate the plot using the selected MATLAB function.
5. Enhance visualization with annotations, colorbars, or interactive features.
6. Save the plot as an image or PDF for documentation or reporting.

Sample MATLAB Function for Plotting

```
```matlab
function plotXnxnMatrix(A, plotType)
% plotXnxnMatrix visualizes an n x n matrix A based on specified plotType
% plotType options: 'heatmap', 'surface', 'mesh'
```

```

figure;
switch lower(plotType)
case 'heatmap'
imagesc(A);
colorbar;
title('Heatmap of nxn Matrix');
case 'surface'
surf(A);
shading interp;
colorbar;
title('Surface Plot of nxn Matrix');
case 'mesh'
mesh(A);
colorbar;
title('Mesh Plot of nxn Matrix');
otherwise
error('Unsupported plot type. Choose heatmap, surface, or mesh.');
```

end

```

xlabel('Columns');
ylabel('Rows');
end
...

```

This function allows flexible visualization based on user preference and can be integrated into larger scripts or GUI applications.
