discus training program pdf: *Education for Cataloging and the Organization of Information* Janet Swan Hill, 2014-04-23 What does the future hold for cataloging education? Written by some of the best-known authors and most innovative thinkers in the field, including Michael Gorman, Sheila S. Intner, and Jerry D. Saye, this comprehensive collection examines education for students and working librarians in cataloging and bibliographic control, emphasizing history, context, the state of the art at present, and suggested future directions. A liberal dose of visual aids—charts, tables, etc.—makes accessing the information quick and easy. From the editor: “The education of catalogers has swung pendulum-like from on-the-job training to graduate education and back again. The place of cataloging in the library school curriculum has swung from one of near pre-eminence to one of near extinction, and has begun to swing back again. The durability of education for cataloging has swung from ‘In getting your degree you will learn everything you need to know in your career,’ to ‘You will have to engage in continuing education throughout your career, beginning virtually as soon as you have your degree.’ Making informed decisions about how (and how much) cataloging education is to be provided is full of pitfalls, some of which the profession has fallen into already. What is needed now is a reconsideration of how education for cataloging and bibliographic control is provided.” *Education for Cataloging and the Organization of Information: Pitfalls and the Pendulum* addresses four main areas: the ways professionals perceive the place, nature, and necessity of cataloging education; the professional, demographic, and academic context within which cataloging education is provided; education regarding special types of materials and special aspects of cataloging; and alternatives to traditional modes of education for cataloging, including: distance education online mentoring Web-based instruction continuing education training for (and via) cooperative projects the role of the “community of catalogers” in the continuing education of those who provide intellectual access to the world of information and much more!

discus training program pdf: Communicating User Experience Trudy Milburn, 2015-07-01

Communicating User Experience: Applying Local Strategies Research to Digital Media Design examines how Local Strategies Research (LSR) helps investigate user experiences with digital media. This edited collection uses case studies to examine the way we communicate in the digital age whether between individuals and digital interfaces (such those installed in cars), dyads via mobile phones and online interfaces, or members of a group through a video conference. Milburn and her contributors consider the cultural norms that both inform and are used during interaction to provide a useful methodology that shifts design (particularly HCI) research from a focus on emotional, subjective user experiences to the everyday practices involved in interacting with one another in and through digital devices and interfaces. Communicating User Experience will be a valuable resource for designers and scholars of communication and new media.

discus training program pdf: Border Security in the Balkans Alice Hills, 2020-11-25

Borders dominate the security agenda in South-east Europe. Political and ethnic discontents focus on disputed borders, while traffickers in migrants and drugs ignore them. The EU argues that the Balkan countries should develop models of border management using its policing standards, but the region is rife with corruption and its border guards are both under-resourced and ineffective. This Paper asks how and why border management in South-east Europe is developing as it is, and what this might mean for the future of Europe. Drawing on recent experience in Bosnia, Herzegovina, Slovenia, Macedonia and Albania, it looks at the ways in which the regions' borders are managed, and gauges the development of a consensual European approach to border security. It shows how governments and guards understand the predicament of regional insecurity, and how they respond with strategies that accommodate, evade or subvert unavoidable political pressures.

discus training program pdf: STEM Education Across the Learning Continuum Amy MacDonald, Lena Danaia, Steve Murphy, 2020-02-18 This is the first comprehensive book to consider STEM education from early childhood through to senior secondary education. It approaches STEM as a form of real-world, problem-based education that draws on the knowledge and skills of the science, technology, engineering and mathematics disciplines. Rather than presenting each of the separate disciplines to an equal extent, it focuses on STEM researchers' perspectives on how their work contributes to effective STEM education in terms of building knowledge, skills and engagement. Gathering contributions by authors from various countries, the book explores effective STEM education from a range of perspectives within the international context. Moreover, it addresses critical issues in STEM education, including transition and trajectories, gender, rurality, socioeconomic status and cultural diversity. By doing so, it not only shares the current state of knowledge in this field, but also offers a source of inspiration for future research.
