essentials of biological anthropology pdf: *Trends in Biological Anthropology 1* Karina Gerdau-Radonić, Kathleen McSweeney, 2015-06-30 This first volume in the series Trends in Biological Anthropology presents 11 papers. The study of modern baboons as proxies to understand extinct hominin species' diet and the interpretation of skeletal degenerative joint disease on the skeletal remains of extant primates are presented as case studies using methods and standards usually applied to human remains. The methodological theme continues with an assessment of the implications for interpretation of different methods used to record Linear Enamel Hypoplasia (LEH) and on the use and interpretation of three dimensional modeling to generate pictures of the content of collective graves. Three case studies on palaeopathology are presented. First is the analysis of a 5th-16th century skeletal collection from the Isle of May compared with one from medieval Scotland in an attempt to ascertain whether the former benefitted from a healing tradition. Study of a cranium found at Verteba Cave, western Ukraine, provides a means to understand interpersonal interactions and burial ritual during the Trypillian culture. A series of skulls from Belgrade, Serbia, displays evidence for beheading. Two papers focus on the analysis disarticulated human remains at the Worcester Royal Infirmary and on Thomas Henry Huxley's early attempt to identify a specific individual through analysis of skeletal remains. The concept and definition of 'perimortem' particularly within a Forensic Anthropology context are examined and the final paper presents a collaborative effort between historians, archaeologists, museum officers, medieval re-enactors and food scientists to encourage healthy eating among present day Britons by presenting the ill effects of certain dietary habits on the human skeleton.

essentials of biological anthropology pdf: *The Red Planet* Bill Hatcher, 2024-04-16 We humans have an extraordinary capacity for compassion—much of it in response to the atrocities we inflict on the planet, its animals, and each other. The popular explanation for this paradox is that we

evolved as carnivorous “killer apes,” who gradually curbed our lust for violence (with frequent exceptions) by implementing humane social norms. This explanation is so well worn, especially in the American psyche, that it epitomizes cliché. So, we could be forgiven for believing it, when nearly every word is fiction. Current research shows that our original biological and social programming is nonviolent. So, what changed? What turned us from goddess-worshipping, plant-eating peacemakers into god-worshipping, animal-eating warmongers? Find out in this fresh, avant-garde nonfiction, *The Red Planet: Gendered Landscapes and Violent Inequalities*, and learn how our intrinsically feminine predilection for peace may yet save us.

essentials of biological anthropology pdf: *How Real Is Race?* Carol C. Mukhopadhyay, Rosemary Henze, Yolanda T. Moses, 2025-03-14 Biologically speaking, there is no such thing as race. Yet this seems to contradict the experiences of people in the United States and other countries where racial classification is used daily, by individuals and institutions. Race still matters, whether in wealth accumulation, educational achievement, health, the legal system, or in personal safety. How can race not be real when we experience its effects every day? Mukhopadhyay, Henze, and Moses systematically deconstruct the myth of race as biology and address the reality of race as a cultural invention, drawing on biocultural, historical, and cross-cultural anthropological perspectives. In doing so, they shed light on the intricate interplay among race, biology, culture, power, and stratification. Part I, “The Fallacy of Race as Biology,” unravels the myth that races are biologically valid divisions of humanity. Part II, “Culture Creates Race,” explores race as a social construction; the emergence of the racial worldview as ideological justification for inequality; and how social processes, especially restrictions on interracial sex and marriage, maintained visible markers of racial hierarchy. Part III, “Contemporary Issues,” examines current manifestations of racial stratification including the educational achievement gap, health disparities, and how the language of race embodies and reinforces a racial worldview. New to this Edition: · New Chapter 11, “Unpacking the Health Consequences of Racial Stratification,” explores the continuing impacts of the racial worldview on race-related health disparities, using the COVID-19 pandemic, maternal health and “weathering,” and exposure to environmental toxins as case studies · New Chapter 12, “Dismantling the Racial World View,” explores racial ideology, including language, and offers alternative approaches to racial language dilemmas. · Updated and expanded discussion of human evolution includes contemporary critiques and alternative scenarios of long-standing models of human evolution and emphasizes our collective African roots. · Updated and expanded coverage of genomics, DNA, epigenetic processes, and the enormous human variability at the molecular level, all challenging “nature” versus “nurture” models of how we become who we are. · New data on immigrants, languages, religions, socio-economic and regional racial-ethnic patterns, interracial marriage and other trends explores contemporary diversity in the United States and suggests traditional racial ideology and categories are becoming obsolete.
