from critical thinking to argument pdf: Inquiry: A New Paradigm for Critical Thinking Mark Battersby, Sharon Bailin, 2018-12-05 This volume reflects the development and theoretical foundation of a new paradigm for critical thinking based on inquiry. The field of critical thinking, as manifested in the Informal Logic movement, developed primarily as a response to the inadequacies of formalism to represent actual argumentative practice and to provide useful argumentative skills to students. Because of this, the primary focus of the field has been on informal arguments rather than formal reasoning. Yet the formalist history of the field is still evident in its emphasis, with respect to both theory and pedagogy, on the structure and evaluation of individual, de-contextualized arguments. It is our view that such a view of critical thinking is excessively narrow and limited, failing to provide an understanding of argumentation as largely a matter of comparative evaluation of a variety of contending positions and arguments with the goal of reaching a reasoned judgment on an issue. As a consequence, traditional critical thinking instruction is problematic in failing to provide the reasoning skills that students need in order to accomplish this goal. Instead, the goal of critical thinking instruction has been seen largely as a defensive one: of learning to not fall prey to invalid, inadequate, or fallacious arguments.

from critical thinking to argument pdf: Constructing Educational Achievement Sivanes Phillipson, Kelly Y.L Ku, Shane N Phillipson, 2014-06-03 International interest focuses on why pupils from East-Asia tend to outperform pupils from the West and scholars have proposed a number of possible explanations to account for these international trends. Using Vygotsky's theory (1978) as a conceptual framework to construct school achievement, this book puts forward culturally relevant context for understanding developmental aspects of children's school achievement and their implication to classroom practice and education progress. Converging the two important lines of inquiry - the child factor and the sociocultural factor - this book showcases evidence-based scholarly works from across the globe that shed light on causes of academic achievement in different contexts. The book brings together eminent scholars from early childhood, primary education, secondary and vocational education who expertly capture the vitality of development and processes of specific child factors and their interaction with their environment that explain their school achievement. Foregrounded in the five planes of cultural historical, institutional, social, personal and mental, the research explain how children think, learn and form the will to perform amidst the changing social and family environment, and challenging school and educational environment.
