heart failure guidelines 2024 pdf: *Pathophysiology, Risk Factors, and Management of Chronic Heart Failure* Ram B. Singh, Jan Fedacko, Krasimira Hristova, Galal Eldin Nagib Elkilany, 2024-04-04 Chronic Heart Failure: Pathophysiology, Risk factors, and Mechanisms is the first of two separate but closely related volumes which aim to provide an inclusive overview on Chronic Heart Failure (CHF). This first volume is focused on the epidemiology, classification, molecular mechanisms, pathophysiology, causes, identification and interactions of heart failure. It will explain the uncertainties and issues in Heart Failure by helping readers understand the physiopathology of CHF in the light of behavioural risk factors. 2D and 3D speckle tracking echocardiography have been used to quantify regional alterations of longitudinal strain and area strain, through their polar projection, which allows a further evaluation of both the site and extent of myocardial damage. The analysis of strain can identify subclinical cardiac failure (myocyte remodelling) which is a major issue in CHF. Myocardial Strain, measure by speckle tracking echocardiography, is frequently attenuated in these conditions and can be utilized for the evaluation of disease progression and the effect of therapeutic interventions as well as prevention because it could be a manifestation of behavioural risk factors. These 2 separate volumes serves as essential references to both researchers and practicing clinicians, proposing novel methods of research by using behavioural and environmental risk factors as intervention agent, as well as discussing deficiency in the present approaches in management of HF and proposing new methods of early diagnosis and therapies for the clinical management of CHF. - Includes a number new and controversial topics: Roles of both behavioural and nutritional risk factors in CHF; considering behavioural intervention which may change the remodelling, as well as nutrient supplementation or change of diet in preventing CHF or converting resistant HF in to HF responding to therapy; Evidence-based knowledge on CHF, with an emphasis on viewing CHF as a disease of the brain and contribution from other systems; Pre-Heart failure which can be prevented to restore normal cardiomyocyte function; Pathogenesis of HF in chronic kidney disease; 2D and 3D speckle tracking echocardiography - Includes never-published tables and figures to aid understanding of the topics - Contributions from international leading experts in the field, written with the aim of serving both researchers and practicing clinicians

heart failure guidelines 2024 pdf: Endocrine and Metabolic Late Effects in Cancer Survivors Francesco Felicetti, Enrico Brignardello, Hanneke M. van Santen, 2021-11-01 This book analyzes in detail all aspects related to endocrine and metabolic late effects observed in patients treated for cancer, both in childhood and adulthood. The chapters focusing on the possible pathogenic mechanisms of late effects (i.e., premature aging and chronic inflammation) and on bone health in cancer survivors are particularly interesting and innovative. The volume also deals with hypothalamic-pituitary, thyroid and gonadal disorders, including infertility and how to prevent it. Finally, the relationship between metabolic alterations and cardiovascular diseases in cancer survivors is addressed. Thanks to advances in cancer treatment and supportive care, the five-year survival rate of cancer patients is constantly increasing. However, this undisputable success of medicine has a flip side: the late adverse effects of anticancer therapies. Pediatric oncologists were the first to cope with late complications of treatments, but today also adult oncologists and onco-hematologists recognize the relevance of this issue. Even though late effects observed in cancer survivors can affect any organ or system, endocrine and metabolic dysfunctions are the most frequently reported. Endocrine complications rarely influence life expectancy of cancer survivors, but they can significantly impact morbidity and quality of life. Among endocrine adverse effects, severe hypothalamic damage may be considered the most harmful in survivors, leading to morbid obesity, propensity to metabolic syndrome and cardiovascular disease. This book aims to disseminate the knowledge about endocrine and metabolic adverse effects of cancer therapies and about survivorship care. Since the number of cancer survivors is steadily growing in the general population, this publication is intended not only for endocrinologists but also for oncologists, onco-hematologists, internists, pediatric specialists in those areas and general practitioners, with the aim to better counsel and monitor cancer survivors.

heart failure guidelines 2024 pdf: Abordaje Interprofesional para el cuidado de las personas con compromiso cardiovascular y respiratorio Luz Patricia Díaz Heredia, Ximena Sáenz Montoya, 2024-05-01 El libro Abordaje interprofesional para el cuidado de las personas con compromiso cardiovascular y respiratorio es un documento académico que se construyó para fortalecer la formación del recurso humano en salud desde una perspectiva interprofesional. A lo largo de 17 capítulos, los autores, desde su experiencia y conocimientos en medicina, enfermería, fisioterapia, ciencias del deporte, educación física y nutrición, buscan orientar el planteamiento de intervenciones integrales y centradas en la persona. Las dos grandes partes del libro desarrollan los elementos para construir el cuidado interprofesional a partir de la revisión de aspectos epidemiológicos, fisiopatológicos, de atención y de cuidado interprofesional. Así, en la primera parte, se presentan los elementos morfofisiológicos que se necesitan para sustentar las propuestas de atención en condiciones cardiovasculares como hipertensión arterial, arritmias cardíacas, falla cardíaca, enfermedad coronaria, trasplante cardíaco y momentos cuando se recibe tratamiento anticoagulante. En la segunda parte, se presenta la revisión de la morfología y fisiología respiratoria, lo cual proporciona información para orientar el trabajo en condiciones de alteración de la salud, tales como asma, síndrome de apnea/hipopnea obstructiva del sueño, hipertensión arterial pulmonar, enfermedad obstructiva crónica y en infecciones pulmonares (incluido el covid-19).
