taken by the tetris blocks pdf: Mathematica David Bessis, 2024-05-28 A fascinating look into how the transformative joys of mathematical experience are available to everyone, not just specialists Math has a reputation for being inaccessible. People think that it requires a special gift or that comprehension is a matter of genes. Yet the greatest mathematicians throughout history, from René Descartes to Alexander Grothendieck, have insisted that this is not the case. Like Albert Einstein, who famously claimed to have "no special talent," they said that they had accomplished what they did using ordinary human doubts, weaknesses, curiosity, and imagination. David Bessis guides us on an illuminating path toward deeper mathematical comprehension, reconnecting us with the mental plasticity we experienced as children. With simple, concrete examples, Bessis shows how mathematical comprehension is integral to the great learning milestones of life, such as learning to see, to speak, to walk, and to eat with a spoon. Focusing on the deeply human roots of mathematics, Bessis dispels the myths of mathematical genius. He offers an engaging initiation into the experience of math not as a series of discouragingly incomprehensible logic problems but as a physical activity akin to yoga, meditation, or a martial art. This perspective will change the way you think not only about math but also about intelligence, intuition, and everything that goes on inside your head.

It helps gaining an overview, defining priorities, and organizing the work in a way it is safe for the objects and the people involved. It defines "logical exits", goals to work towards where the collection is in a state the next steps can wait without risking the progress made. Later on, readers learn to define their own "logical exits" that fit their specific situation. Compared to other books about collections management it doesn't focus on the details of collections care, but rather on the big picture of managing such a project. It assumes that at the beginning there is nothing but the reader and an unmanaged collection, so that part of the project is to source money, material, and people to help. The second edition has a new chapter on setting up collections management systems, the original text was reworked and in parts enhanced, there are additional success stories in the last chapter with references to them in the text, and the bibliography now contains some resources for natural history, indigenous, and archaeological collections.
