zones of regulation book: *The Zones of Regulation* Leah M. Kuypers, 2011 ... a curriculum geared toward helping students gain skills in consciously regulating their actions, which in turn leads to increased control and problem solving abilities. Using a cognitive behavior approach, the curriculum's learning activities are designed to help students recognize when they are in different states called zones, with each of four zones represented by a different color. In the activities, students also learn how to use strategies or tools to stay in a zone or move from one to another. Students explore calming techniques, cognitive strategies, and sensory supports so they will have a toolbox of methods to use to move between zones. To deepen students' understanding of how to self-regulate, the lessons set out to teach students these skills: how to read others' facial expressions and recognize a broader range of emotions, perspective about how others see and react to their behavior, insight into events that trigger their less regulated states, and when and how to use tools and problem solving skills. The curriculum's learning activities are presented in 18 lessons. To reinforce the concepts being taught, each lesson includes probing questions to discuss and instructions for one or more learning activities. Many lessons offer extension activities and ways to adapt the activity for individual student needs. The curriculum also includes worksheets, other handouts, and visuals to display and share. These can be photocopied from this book or printed from the accompanying CD.--Publisher's website.

Nichole Bordner, 2021 This dissertation provides an examination of the effects of implementation of Zones of Regulation ® social skills lessons implemented virtually with first-grade students on their knowledge of self-regulation skills. A single-subject multiple probe experimental design across participants was utilized with three first-grade students from a Midwestern suburban school district. Participants' acquisition and maintenance of their knowledge around self-regulation were measured through a self-regulation probe. Visual analysis, percentages of nonoverlapping data, and TAU-U calculations were used to examine the intervention effects. Results demonstrated that the social skills lessons utilizing the Zones of Regulation ® improved the acquisition of the participants' knowledge of self-regulation skills. Limitations of the current study and directions for future research are also discussed.
