Historical Background of Finger Rings

Origins and Ancient Civilizations

The earliest evidence of finger rings dates back to prehistoric times, where simple bands made from bone, stone, or ivory served as personal adornments or talismans. Study Of Finger Rings

study of finger rings: Roman Artefacts and Society Ellen Swift, 2017 In this book, Ellen Swift uses design theory, previously neglected in Roman archaeology, to investigate Roman artifacts in a new way, making a significant contribution to both Roman social history and our understanding of the relationships that exist between artefacts and people. Based on extensive data collection and the close study of artefacts from museum collections and archives, the book examines the relationship between artefacts, everyday behavior, and experience. The concept of affordances--features of an artefact that make possible, and incline users towards, particular uses for functional artifacts--is an important one for the approach taken. This concept is carefully evaluated by considering affordances in relation to other sources of evidence, such as use--wear, archaeological context, the end--products resulting from artifact use, and experimental reconstruction. Artifact types explored in the case studies include locks and keys, pens, shears, glass vessels, dice, boxes, and finger-rings, using material mainly drawn from the north-western Roman provinces, with some material also from Roman Egypt. The book then considers how we can use artefacts to understand particular aspects of Roman behavior and experience, including discrepant experiences according to factors such as age, social position, and left- or right-handedness, which are fostered through artifact design. The relationship between production and users of artifacts is also explored, investigating what particular production methods make possible in terms of user experience, and also examining production constraints that have unintended consequences for users. The book examines topics such as the perceived agency of objects, differences in social practice across the provinces, cultural change and development in daily practice, and the persistence of tradition and social convention. It shows that design intentions, everyday habits of use, and the constraints of production processes each contribute to the reproduction and transformation of material culture.

study of finger rings: The Vrbová Lhota Settlement - a Case Study of Germanic Elites in the 3rd Century AD in Central Bohemia Zdeněk Beneš, Viktoria ČISTÁKOVÁ, 2024-01-01 During the Roman Period, the region of the basin of the Výrovka Stream, a left-bank tributary of the Elbe River on the border of the districts of Kolín and Nymburk, contains an extraordinary concentration of funerary sites of particular European importance and which belong to the representative part of the National Museum collection (Dobřichov-Pičhora, Dobřichov-Třebická). The determined settlements thus far are an unexploited source of knowledge about the development of these key

regions in Bohemia during the Roman Period. In recent years, the assemblage from the Vrbová Lhota site stands out among the other settlement sites from the 3rd century AD. The collection of the finds is characterised by a large number of metal finds, among which Roman imports stand out: parts of bronze vessels, bells, brooches, fittings and a bronze anthropomorphic statue. Also known from the site are numerous indicators of non-ferrous metalworking activities – these are often interpreted as some of the evidence of the presence of elites, who were suppliers of raw materials (often of Roman origin), but also customers of the final products. Additional evidence of the presence of local elites is a rich collection of bronze, silver and gold coins dated to the 2nd century up to the second half of the 3rd century AD. The aim of this study is to evaluate an unpublished set of finds along with new ones coming from surface surveys (2020–2021 seasons) and based on the results of the archaeometric study of selected metal finds. With the aid of archaeometry, we attempt to analyse the metallurgical activities at the site and their relationship with other sites in the Central European part of the Barbaricum. Oblast povodí říčky Výrovky, levobřežního přítoku Labe na hranici okresů Kolín a Nymburk v době římské představuje mimořádnou koncentraci evropsky významných funerálních lokalit, které patří k reprezentativní součásti sbírky Národního muzea (Dobřichov-Pičhora, Dobřichov-Třebická). Dosud známé sídlištní lokality představují dosud nevyužitý pramen k poznání vývoje tohoto klíčového regionu ve středních Čechách doby římské. Mezi jinými lokalitami ze 3. století n. l. vyniká poslední roky obohacovaný soubor z lokality Vrbová Lhota. Nálezový soubor se vyznačuje množstvím kovových nálezů, mezi nimiž vynikají římské importy: části bronzových nádob, zvonky, spony, kování a bronzová antropomorfní plastika. Z lokality jsou také známy četné doklady zpracování neželezných kovů – ty jsou často interpretovány jako jeden z dokladů přítomnosti elit, které byly dodavateli surovin (často římského původu), ale také odběrateli finálních výrobků. Dalším dokladem přítomnosti místních elit je bohatá sbírka bronzových, stříbrných a zlatých mincí, datovaná do 2. až 2. poloviny 3. století našeho letopočtu. Cílem této studie je zhodnocení dosud nepublikovaného souboru nálezů získaného povrchovou prospekci za pomoci detektorů kovu a interpretace metalografických analýz, které na něm byly provedeny. Analýza kovoliteckých aktivit na lokalitě pomáhá situovat toto sídliště v kontextu podobných lokalit středoevropského barbarika. Kniha je v angličtině, s českým resumé.

study of finger rings: The Insula of the Menander at Pompeii Penelope M. Allison, 2007-01-04 This book contains catalogues, analyses, photographs and drawings of some 2,000 archaeological artefacts excavated from the Insula of the Menander in Pompeii. The catalogues, and analyses are organized by provenance - buildings, rooms, and location within rooms - so that the reader can understand the artefacts as household assemblages. The functions of artefacts and groups of artefacts are discussed, as are the Latin names which are often given to these artefacts, and the relationships of these assemblages to the state of occupancy of the buildings in the Insula during the last years of Pompeii. This study, therefore, provides a wealth of information, not only on the range and use of artefacts in Pompeian houses but also on Roman artefacts, and Roman society, more generally.

study of finger rings: People and Spaces in Roman Military Bases Penelope M. Allison, 2013-10-31 This study uses artefact distribution analyses to investigate the activities that took place inside early Roman imperial military bases. Focusing especially on non-combat activities, it explores the lives of families and other support personnel who are widely assumed to have inhabited civilian settlements outside the fortification walls. Spatial analyses, in GIS-type environments, are used to develop fresh perspectives on the range of people who lived within the walls of these military establishments, the various industrial, commercial, domestic and leisure activities in which they and combat personnel were involved, and the socio-spatial organisation of these activities and these establishments. The book includes examples of both legionary fortresses and auxiliary forts from the German provinces to demonstrate that more material-cultural approaches to the artefact assemblages from these sites give greater insights into how these military communities operated and demonstrate the problems of ascribing functions to buildings without investigating the full material record.

study of finger rings: *The Insula of the Menander at Pompeii* Roger Ling, Penelope M. Allison, Paul R. Arthur, 1997 The Insula of the Menander is one of the most completely excavated city blocks in Pompeii, with buildings ranging from small shops to large aristocratic houses. This volume, the third in a series of five volumes examining the Insula, is the first ever comprehensive study of the contents of Pompeian houses and buildings within their original contexts. It provides a great insight into living conditions in Pompeii during the final years of the city.
