judith bell doing your research project: Doing Your Research Project Judith Bell, 1999
Why do ethnic groups adopt violent means? In the 1990's, ethnicity emerged as the principle source of organized violence around the world. Ethnic wars were no longer internal conflicts between substate actors; instead they challenged state sovereignty and taxed the international community's ability to respond. Efforts to understand ethnic conflict remain divorced from the study of systemic change and the declining authority, capacity, and legitimacy of weak multiethnic states. This work proposes that the phenomenon of ethnic violence must be understood through a multilevel approach and that finding a solution to ethnic violence is possible only if we have a clear understanding of the sources that spark such violence in the first place. The Three Images of Ethnic War identifies the causes of ethnic war at three levels of analysis — the group, the state, and the international. These are the three images of ethnic war. This book places the outbreak of violence within context of the state and the international system in which the violence unfolds. Hanlon examines three violent ethnic wars in Yugoslavia, Nagorno-Karabakh, and Iraq. Yugoslavia's violent ethnic wars, the war over Nagorno-Karabakh, and the violent conflict between Kurds and Arabs in Iraqi Kurdistan demonstrate that ethnic violence is a complex and multifaceted occurrence. Hanlon argues that the numerous reasons why groups adopt violent means can only be understood through a multilevel framework of the three images of ethnic war and the interrelationship among them.

judith bell doing your research project: Ideology And The Fall Of Empires: The Decline Of The Spanish Empire And Its Comparison To Current American Strategy Major Enrique Gomariz Devesa, 2014-08-15 Sometimes, the ideology that formed the basis for founding an empire can become the cause of its fall. The decline of the Spanish Empire is a clear example of how ideology may both adversely influence national grand strategies and trigger processes of decline of an empire. The strong religious conviction of the Habsburgs was a fundamental factor in defining an imperial strategy that did not conform to the genuine interests of Spain as the core of the Empire. This strategy did not take into account limited Spanish capabilities that were not enough to achieve its religious goals. The purpose of this research is not to analyze in depth how religion influenced the decline of the Spanish Empire, but to use this process to establish a paradigm to explain how ideologies can become a negative influence on national policies. Once the paradigm is established, it will be compared to a similar process to develop some valid conclusions regarding the importance of defining national strategic objectives according to the interests and capabilities of each state. Over the last two decades, the desire to expand and promote democracy around the world became the dominant ideology in the United States. Therefore, its influence in the evolution of recent American national strategies serves as a valid comparison. This study presents some conclusions that not only might be applicable for the analysis and study of national strategies, but also may help to understand how and when ideologies that may be necessary to maintain the cohesion of nations and empires, can become a source of national decline.
