Emma has 125 apples. She gives 30 apples to her friend and then buys another 50 apples. How many apples does Emma have now?

Solution:

- Starting with 125 apples.
- Subtract 30 apples given away: $125 - 30 = 95$.
- Add 50 apples bought: $95 + 50 = 145$.

Answer: Emma now has 145 apples.

Problem 2: Multiplication and Division

There are 8 boxes of chocolates. Each box contains 24 chocolates. How many chocolates are there in total?

Solution:

- Total chocolates = 8 boxes $\times$ 24 chocolates per box = $8 \times 24 = 192$.

Answer: There are 192 chocolates in total.

Problem 3: Fractions and Decimals

Liam drank $\frac{3}{4}$ of a liter of juice. How much juice did he drink in milliliters? (Hint: 1 liter = 1000 ml)

Solution:

- Convert $\frac{3}{4}$ liters to milliliters: $(\frac{3}{4}) \times 1000 \text{ ml} = (0.75) \times 1000 = 750 \text{ ml}$.

Answer: Liam drank 750 ml of juice.

Problem 4: Percentage

A shop offers a 20% discount on a bicycle that costs £150. What is the discount amount, and what is the new price?

Solution:

- Discount amount = 20% of £150 = $0.20 \times 150 = £30$.

- New price = £150 - £30 = £120.

Answer: The discount is £30, and the new price is £120.

Problem 5: Measurement and Data

A swimming pool is 25 meters long, 10 meters wide, and 2 meters deep. What is its volume in cubic meters?

Solution:

- Volume = length $\times$ width $\times$ depth = $25 \times 10 \times 2 = 500$ cubic meters.

Answer: The pool's volume is 500 cubic meters.

word problems year 5: *Knowing and Teaching Elementary Mathematics* Liping Ma, 2020-01-06 The 20th anniversary edition of this groundbreaking and bestselling volume offers powerful examples of the mathematics that can develop the thinking of elementary school children. Studies of teachers in the U.S. often document insufficient subject matter knowledge in mathematics. Yet, these studies give few examples of the knowledge teachers need to support teaching, particularly the kind of teaching demanded by reforms in mathematics education. *Knowing and Teaching Elementary Mathematics* describes the nature and development of the knowledge that elementary teachers need to become accomplished mathematics teachers, and suggests why such knowledge seems more common in China than in the United States, despite the fact that Chinese teachers have less formal education than their U.S. counterparts. Along with the original studies of U.S. and Chinese teachers' mathematical understanding, this 20th anniversary edition includes a new preface and a 2013 journal article by Ma, *A Critique of the Structure of U.S. Elementary School Mathematics* that describe differences in U.S. and Chinese elementary mathematics. These are augmented by a new series editor's introduction and two key journal articles that frame and contextualize this seminal work.
