www.esnips.com/web/forjts When this book was written, it was hard to decide on what the title should be. I finally reduced my choice to two titles, the second one being used as the sub-title: THE VATICAN CIPHERS. If I had not been so sensitive to the economic and social consequences of the Kennedy and Lincoln assassinations, this would have been the actual title, because more than anything else this is about the early invention of our languages. Some of the most important discoveries include the following: Religious names and words such as Christ, Thomas, crucifixion and others were used as roots to invent many of our modern day words, but they were originally written phonetically, and then hidden away when dictionaries standardized our spelling of words. A technique was discovered showing how rootwords and rootnames were used to create other words and ideas and then those ideas and words were used to create detail in short stories especially myths and religious fables of the New Testament. Since this technique was not known to exist, it fell on me to invent a name for it, I named it the ROOTWORD TECHNIQUE. Finally, I discovered that the alphabet was pictorial, or hieroglyphic. The wordsmiths who created our vocabulary used the letters as pictures as well as symbols for sounds.

ra ra the lion: Ancient Egypt Gerald Massey, 2007-10-01 With his earlier two series in Egyptology, Gerald Massey turned existing doctrine on its head to argue that not only had Egypt spawned human civilization, but that Egyptian mythology was the basis for Jewish and Christian beliefs. The culmination of his years at this particular intellectual pursuit, Ancient Egypt: The Light of the World is Massey's crown jewel. In this, the most philosophical (in both tone and concept) of his Egyptological works, Massey, ever the intrepid escort, leads a tour through thousands of years of sociological, cultural, and spiritual development, all the while pointing, with dazzling reason and persuasive prose, to a distant, common, Egyptian origin. British author GERALD MASSEY (1828-1907) published works of poetry, spiritualism, Shakespearean criticism, and theology, but his best-known works are in the realm of Egyptology, including A Book of the Beginnings and The Natural Genesis.

ra ra the lion: The Exodus from Egypt and the Desert of Amenta Gerald Massey, 2008-11-01 When roughly classed, the myths and legends generally show two points of departure for migrations of the human race, as these were rendered in the stellar and solar mythology. One is from the summit of the celestial mount, the other from the hollow underworld beneath the mount or inside the earth. The races that descended from the mount were people of the pole whose starting-point in reckoning time was from one or other station of the pole-star, determinable by its type, whether as the tree, the rock, or other image of a first point of departure. Those who ascended from the nether-world were of the solar race who came into existence with the sun as it is represented in the legendary lore... from The Exodus from Egypt and the Desert of Amenta It goes unappreciated by modern Egyptologists, but it is embraced by those who savor the concept of a hidden history of humanity, and those who approach all human knowledge from the perspective of the esoteric.

Gerard Massey 's massive Ancient Egypt: The Light of the World first published in 1907 and the crowning achievement of the self-taught scholar redefines the roots of Christianity via Egypt, proposing that Egyptian mythology was the basis for Jewish and Christian beliefs. Here, Cosimo proudly presents Book 8 of Ancient Egypt, in which Massey roots the story of the Hebrew exodus deep in Egyptian legend. From wilderness deserts and promised lands of plenty to magical rods and twelve tribes, Massey explains how the Hebrew tale descended from the story of Ra. Peculiar and profound, this work will intrigue and delight readers of history, religion, and mythology. British author GERALD MASSEY (1828 1907) published works of poetry, spiritualism, Shakespearean criticism, and theology, but his best-known works are in the realm of Egyptology, including A Book of the Beginnings and The Natural Genesis.
