david attenborough fact file: *Dinosaurs Rediscovered* Michael J. Benton, 2019-06-11 In this fascinating and accessible overview, renowned paleontologist Michael J. Benton reveals how our understanding of dinosaurs is being transformed by recent fossil finds and new technology. Over the past twenty years, the study of dinosaurs has transformed into a true scientific discipline. New technologies have revealed secrets locked in prehistoric bones that no one could have previously predicted. We can now work out the color of dinosaurs, the force of their bite, their top speeds, and even how they cared for their young. Remarkable new fossil discoveries—giant sauropod dinosaur skeletons in Patagonia, dinosaurs with feathers in China, and a tiny dinosaur tail in Burmese amber—remain the lifeblood of modern paleobiology. Thanks to advances in technologies and methods, however, there has been a recent revolution in the scope of new information gleaned from such fossil finds. In *Dinosaurs Rediscovered*, leading paleontologist Michael J. Benton gathers together all the latest paleontological evidence, tracing the transformation of dinosaur study from its roots in antiquated natural history to an indisputably scientific field. Among other things, the book explores how dinosaur remains are found and excavated, and especially how paleontologists read the details of dinosaurs' lives from their fossils—their colors, their growth, and even whether we will ever be able to bring them back to life. Benton's account shows that, though extinct, dinosaurs are still very much a part of our world.

david attenborough fact file: *Headless Males Make Great Lovers* Marty Crump, 2024-05-31 The natural world is filled with diverse—not to mention quirky and odd—animal behaviors. Consider the male praying mantis that continues to mate after being beheaded; the spiders, insects, and birds that offer gifts of food in return for sex; the male hip-pocket frog that carries his own tadpoles; the baby spiders that dine on their mother; the beetle that craves excrement; or the starfish that sheds an arm or two to escape a predator's grasp. *Headless Males Make Great Lovers and Other Unusual Natural Histories* celebrates the extraordinary world of animals with essays on curious creatures and their amazing behaviors. In five thematic chapters, Marty Crump—a tropical field biologist well known for her work with the reproductive behavior of amphibians—examines the bizarre conduct of animals as they mate, parent, feed, defend themselves, and communicate. Crump's enthusiasm for the unusual behaviors she describes—from sex change and free love in sponges to aphrodisiac concoctions in bats—is visible on every page, thanks to her skilled storytelling, which makes even sea slugs, dung beetles, ticks, and tapeworms fascinating and appealing. Steeped in biology, *Headless Males Make Great Lovers* points out that diverse and unrelated animals often share seemingly bizarre behaviors—evidence, Crump argues, that these natural histories, though outwardly weird, are successful ways of living. Illustrated throughout, and filled with vignettes of personal and scientific interest, *Headless Males Make Great Lovers* will enchant the general reader with its tales of blood-squirting horned lizards and intestine-ejecting sea cucumbers—all in the service of a greater appreciation of the diversity of the natural histories of animals.

Two: Sacred Ground, is the final installment in the Sacred Ground Trilogy. There are two separate time-lines. As the story opens, it is 2019 and Dr. Glen Abbott has traveled to Scotland to meet with Mairi-Lea Hartford at the insistence of Gaia Magni, the Supreme Spiritual Being charged with restoring harmony and balance to Nature and preventing a Sixth Extinction Level Event (ELE). Gaia Magni has taken control of Earth. She is prepared, if necessary, to wipe humanity from the face of the Earth in order to protect the millions of other species in the Biosphere. But Earth has lost her resiliency and Gaia Magni is forced to adopt extreme measures in order to save Nature and humanity. She seeks help from the late John Hartford, the brilliant theoretical physicist assassinated in 1983 by the Soviet Union. Gaia Magni requires Hartford's unique understanding of quantum theory to build a Galactic Bridge that will link Earth with Echo, the new world she has created 70,000 light years across the galaxy. Echo is humanity's last chance to live in harmony and balance with Nature. But a visit to an Alternate Reality reveals a devastating future for Earth. The Doomsday Clock is ticking and it is a race against Time to save the Biosphere. In the alternate reality of 2017, Glen Abbott's relationship with Virginia Montgomery is failing. She suffers from a retrograde amnesia that has left her without any emotional connection to her daughter or husband. Their marriage is on the rocks and he fears he has lost his chance to reclaim the love and contentment they had enjoyed before her death in 2018. In desperation, he tells her the truth; that he is from the future and that their daughter, Hannah, will evolve into Gaia Magni upon her Ascension. But can Montgomery, who has her own demons to contend with, believe him? Trust him? Ever love him again?

The authors distinguish internal and external dimensions of the equitable and just treatment of individuals taking language tests which are used as gatekeeping devices to determine access to education and employment, immigrant status, citizenship, and other rights. The second goal is to show how the extent of test fairness can be demonstrated and improved using the tools of psychometrics, in particular the models collectively known as Rasch measurement. "This book will have an enormous impact on the field of language assessment. Using Rasch analysis models to explore and identify sources of unfairness, the authors make a compelling case for fairness in the design and implementation of language assessment instruments and for justice in the interpretation and use of test results. Sarfraz Manzoor was two years old when, in 1974, he emigrated from Pakistan to Britain with his mother, brother, and sister. Sarfraz spent his teenage years in a constant battle, trying to reconcile being both British and Muslim, trying to fit in at school and at home. As with most things in his life, Simon's drift into academia just sort of happened, the result of a series of coincidences and twists of fate over which he seemed to exert minimal control, regardless of whatever alternative path he might have preferred. So, instead of spending his early twenties enjoying a slow, predictable existence in the English countryside of his youth, Simon finds himself first as a reluctant post-graduate student in London, working for a quintessentially eccentric professor, and then and much to his chagrin - propelled across the Atlantic to the USA, to pursue some harebrained experiment or other. All in the name of science. Simon lurches from one unsolicited career opportunity to another, finally getting himself caught up in an academic political battle going on half a world, and a whole scientific dimension, away from his own. Not that distance or relevant experience appear to be factors when it comes to Simon Mills vocation. It seems fortune just wont leave him alone.
