He was sent to the Auschwitz concentration camp in 1941, where he experienced the worst atrocities of the Holocaust. happiest man on earth: The Happiest Man on Earth Ken Loetscher, 1999-05

happiest man on earth: American Anxieties Louis Filler, 1993-01-01 American Anxieties is a brilliant, unorthodox portrait of the 1930s. Filler does what others have tried, but few have succeeded in accomplishing: he captures the continuity between the 1930s and the 1990s. He does this less by personal accounts or statistical comparisons, than by the emphasis upon a common core of concerns that link the recent past with the present in American society and culture. The decade of the 1930s was unique in the history of the United States. The commercial order that prevailed from the Civil War to the Roaring Twenties, and had pervaded every aspect of American life, was reeling under the weight of a massive depression and a world made weary by militarism. The response was a rediscovery in America of the pioneer virtues of cooperation and solidarity. American Anxieties provides a collective portrait of an era: that blend of fear, hope, excitement, anger, and joy that everyone who lived in that time will feel again; for those too young for that time, it links the 1990s with the emergence of a powerful black culture, studies on women by men and women, and the rediscovery on a large scale of ethnicity. Far from being a stereotypical statement of the proletarian thirties, Filler's work is--in his own words, and in those of great writers of the time--a multicultural and multifaceted tool of broad pedagogical and personal use. Included in the volume are major writings of Albert Jay Nock, John Dewey, Edmund Wilson, Meyer Levin, Milton Hindus, John Dos Passos, S. J. Perelman, John Steinbeck, and many others. Louis Filler is the author of the classic Muckrakers, best-selling Crusade Against Slavery, Dictionary of American Social Reform, Unknown, Edwin Markham, Dictionary of American Conservatism, among many others, as well as biographies of Randolph Bourne and David Graham Phillips. Long associated with Antioch College, he also visited some 200 other academic institutions as faculty member or lecturer.

happiest man on earth: Radical Innocence Bernard F. Dick, 2021-08-24 On October 30, 1947, the House Committee on Un-American Activities concluded the first round of hearings on the alleged Communist infiltration of the motion picture industry. Hollywood was ordered to clean its own house, and ten witnesses who had refused to answer questions about their membership in the Screen Writers Guild and the Communist party eventually received contempt citations. By 1950, the Hollywood Ten (as they quickly became known), which included writers, directors, and a producer, were serving prison sentences ranging from six months to one year. Since that time, the members of the Hollywood Ten have been either dismissed as industry hacks or eulogized as Cold War martyrs, but never have they been discussed in terms of their professions. Radical Innocence: A Critical Study of the Hollywood Ten is the first study to focus on the work of the Ten: their short stories, plays, novels, criticisms, poems, memoirs, and, of course, their films. Drawing on myriad sources, including archival materials, unpublished manuscripts, black market scripts, screenplay drafts, letters, and personal interviews, Bernard F. Dick describes the Ten's survival tactics during the blacklisting and analyzes the contributions of these ten individuals not only to film but also to the arts. Radical Innocence captures the personality of each of the Ten, including the arrogant Herbert J. Biberman, the witty Ring Lardner Jr., the patriarchal Samuel Ornitz, the compassionate Adrian Scott, and the feisty Dalton Trumbo.

happiest man on earth: Our Human Herds Stephen Martin Fritz, 2020-09-04 *Our Human Herds* presents a new theory in moral and political philosophy, called dual morality. The theory proposes that just as the physical senses of sight, smell, taste, touch and hearing evolved to help us navigate our physical environment, two independent moral senses evolved to guide us to success in our social world. One prioritizes cooperation; the other, competition. The first bases moral justification on the egalitarianism that emphasizes our equal worth; the other finds moral justification in the inequalities that allow us to distinguish better from worse. Liberal and conservative are merely the names given to the political manifestations of these two forms of moral expression, just as socialist and capitalist describe their economic manifestations, and personality and character their psychological ones. *Our Human Herds* addresses what it means to be a human being, why we fight about the things that divide us, and why we unite behind the ideas that draw us together. The book examines all aspects of human social behavior, revealing how and why we often disagree in our approaches to education, history, war, crime, pleasure, happiness, politics, science and religion. This is a learned, thoroughly researched study - and dazzlingly bright. The effervescent approach to writing makes its pages fly by ... Studies as brilliant as this one deserve a far wider audience. An engrossing and mind-expanding examination of morality -Kirkus Reviews Book Review: A vast philosophical study charts the shifting moral landscape while tackling the weightiest question of human existence: what is the meaning of life? Humanity's moral framework remains in a constant state of reconstruction. As the author points out in his opening chapter: "Two hundred years ago if a woman was raped and became pregnant we'd kill the rapist and spare the baby. Today, we spare rapist and kill the baby. Centuries ago many cultures condoned polygamy; today we put people in jail for it." Over the course of this weighty tome, which is just shy of 1,000 pages, the author ponders what morality is (with an emphasis on humans as grouping or "herding" creatures) and the causes of

its flux and reflux. Furthermore, there is an attempt to reconcile opposing philosophical theories by introducing a new conceptual model called "Dual Morality," proposed as an "all-encompassing blueprint of human morality." The study is logically structured, divided into four sections: "The Theory of Dual Moralism," "The Explanation" (including investigations of the group and the self), "The Derivations" (which considers family, country, religion, and science/nature/technology), and finally "The Extrapolations" (a far-reaching look at everything from pleasure and happiness to suicide, murder, and abortion). The author possesses the rare skill of being able to explore himself with an enviable ease, drawing on palatable references to popular culture. For example: "Comedian Woody Allen said he laughs at his own jokes when they first come to him because humor originates in the unconscious. When his conscious mind hears them for the first time, it is as if they came from another place, and so we are, in a way, an audience to our own humor." This approach, applied throughout, makes complex ideas not only accessible, but entertaining and enjoyable as well. The result is far from the predictable, dry academic thesis. This is a learned, thoroughly researched study—and dazzlingly bright. The effervescent approach to writing makes its 951 pages fly by. Fritz's dedication is to "that miniscule fragment of humanity who read books like this." Studies as brilliant as this one deserve a far wider audience. An engrossing and mind-expanding examination of morality. -- Kirkus Indie, Kirkus Media LLC, 6411 Burleson Rd., Austin, TX 78744
