map of northern italy and europe: The Oxford Handbook of the European Bronze Age Harry Fokkens, Anthony Harding, 2013-06-27 The Oxford Handbook of the European Bronze Age is a wide-ranging survey of a crucial period in prehistory during which many social, economic, and technological changes took place. Written by expert specialists in the field, the book provides coverage both of the themes that characterize the period, and of the specific developments that took place in the various countries of Europe. After an introduction and a discussion of chronology, successive chapters deal with settlement studies, burial analysis, hoards and hoarding, monumentality, rock art, cosmology, gender, and trade, as well as a series of articles on specific technologies and crafts (such as transport, metals, glass, salt, textiles, and weighing). The second half of the book covers each country in turn. From Ireland to Russia, Scandinavia to Sicily, every area is considered, and up to date information on important recent finds is discussed in detail. The book is the first to consider the whole of the European Bronze Age in both geographical and thematic terms, and will be the standard book on the subject for the foreseeable future.

map of northern italy and europe: Areal Linguistics within the Phonological Atlas of Europe Thomas Stolz, Nataliya Levkovich, 2021-08-23 In contrast to many other levels of language, there is as yet no comprehensive areal-linguistic description of the segmental phonological properties of the languages of Europe. To complement the synchronic picture of the languages of

Europe, it is time to take stock of their phoneme inventories to provide an empirical basis for generalizations about the similarities and dissimilarities of the languages of Europe. The best way to visualize the areal phonology of Europe is that of the Phonological Atlas of Europe (Phon@Europe) which features the isoglosses of phonological phenomena on a plethora of maps. As a prequel to Phon@Europe, this study not only outlines the goals, methodology, sample, and theory of the project but also focuses on loan phonemes whose diffusion across the 210 doculects of the sample yields meaningful patterns. The patterns are indicative of recent processes of convergence which have transformed a diverse phonological mosaic into a superficially homogeneous linguistic area. The developments which have led to the present situation are traced back through the history of the sample languages.

map of northern italy and europe: Dynamics of Regional Growth in Europe Andres Rodriguez-Pose, 1998-11-19 In a period of deep economic, social, and political transformation, regional disparities seem to be particularly resistant to change. The emergence of a global economy, the shift in production methods, and the greater mobility of capital, labour, and raw materials have not brought about a radical reshuffling of the prevailing regional disparities. There is a greater concentration of economic activity in core areas and very few peripheral regions are taking advantage of the process of global restructuring. The Dynamics of Regional Growth in Europe looks for the reasons behind this persistence in the social, political, and institutional arrangements of a large set of European regions, by trying to relate two scientific approaches concerned with regional economic performance, which share very little in common: the literature on socio-economic restructuring and structural change, and neoclassical and endogenous growth theories. map of northern italy and europe: The History of Families and Households: Comparative European Dimensions Silvia Sovic, Pat Thane, Pierpaolo Viazzo, 2015-11-30 The history of family and households has been the subject of intensive research for over a generation. In the 1970s Peter Laslett and others set the agenda with a strong emphasis on geographical differences between northern and southern, eastern and western Europe. Others have challenged this view, pioneering different approaches. This volume takes stock of the field, focussing particularly on family history in South-East Europe in comparison with the rest of Europe. The authors consider what European families have in common, their regional and local differences and changes over time, using the rich and fascinating variety of sources and methods used by family historians today. Contributors include: Guido Alfani, Judit Ambrus, Mirjana V. Bobić, Siegfried Gruber, Peter Guzowski, Violetta Hionidou, Daniela Lombardi, Beatrice Moring, Silvia Sovič, Pat Thane, Alice Velková, Marta Verginella, and Pier Paolo Viazzo.

map of northern Italy and Europe: Shedding The Veil: Mapping The European Discovery Of America And The World Thomas Suarez, 1994-04-29 Shedding the Veil is a highly original overview of Europe's exploration and discovery beyond her own confines. It tackles the subject via an analysis of maps dating from circa 1434 to 1865, with an emphasis on the period before 1600. The book begins with an appraisal of the peculiar circumstances which led late medieval Europe to pursue long-distance travel, both overland and by sea, introduces cosmographic traditions inherited from classical times, and investigates pre-Columbian excursions into the western ocean. Finally, the great voyages and mappamundi of the early sixteenth century are described in depth. After 1600 the focus begins to narrow North America and particularly to the colonization of the American Northeast. All maps discussed in detail are illustrated. 40 full-page b/w plates, 25 full-page color plates.

map of northern Italy and Europe: Quaternary Vegetation Dynamics of Europe Gerhard Lang, Brigitta Ammann, Karl-Ernst Behre, Willy Tinner, 2023-06-12 Based on palaeoecological studies by many authors, this book gives an overview of the changing history of the European plant cover during the past 2.6 million years, characterized by numerous cold and warm periods. The period of the last 20 000 years (from the Last Glacial Maximum to the present) is presented in detail, with special emphasis on the vegetation dynamics of Europe, the history of selected woody plants, the development of lakes and bogs and the emergence of European cultural landscapes under the influence of humans over thousands of years. In the analysis of the glacial and interglacial periods, the focus is on the different vegetation developments and the progressive impoverishment of the European flora. Further important topics are the spatio-temporal patterns and causes of long-term vegetation changes, the legacies of disturbances and land use on vegetation composition, the role of palaeoecology in nature conservation and its contribution to ecology and environmental sciences. In addition to recent research results, the book provides an overview of the main palaeoecological research methods. It concludes with a summary of the history of palaeoecology and Quaternary botany. For the first time, a detailed synthesis is presented of the many findings on European vegetation dynamics, which are complex and increasingly difficult to summarize. Numerous figures and tables, many of them original, accompany the text. The bibliography includes over 3000 publications. This book is primarily intended for students, researchers and practitioners in plant ecology, palaeoecology, palaeoclimatology, forestry, agronomy, Quaternary sciences, climate sciences, biogeography, geography and archaeology.
