How do we take stock of a life—by what means, and by what measure? This is the question that preoccupies Alice, a Taiwanese immigrant in her late thirties. In the off-hours from her day job, Alice struggles to create a project about the enigmatic downtown performance artist Tehching Hsieh and his monumental, yearlong 1980s performance pieces. Meanwhile, she becomes the caretaker for her aging stepfather, a Vietnam vet whose dream of making traditional Chinese furniture dissolved in alcoholism and dementia. As Alice roots deeper into Hsieh's radical use of time—in one piece, the artist confined himself to a cell for a year; in the next, he punched a time clock every hour, on the hour, for a year—and his mysterious disappearance from the art world, her project starts metabolizing events from her own life. She wanders from subway rides to street protests, loses touch with a friend, and tenderly observes her father's slow decline. who the hell is alice: *Raising the Dead* Ronald Munson, 2002-01-17 Perhaps no medical breakthrough in the twentieth century is more spectacular, more hope-giving, or more fraught with ethical questions than organ transplantation. Each year some 25,000 Americans are pulled back from the brink of death by receiving vital new organs. Another 5,000 die while waiting for them. And what distinguishes these two groups has become the source of one of our thorniest ethical questions. In *Raising the Dead*, Ronald Munson offers a vivid, often wrenchingly dramatic account of how transplants are performed, how we decide who receives them, and how we engage the entire range of tough issues that arise because of them. Each chapter begins with a detailed account of a specific case--Mickey Mantle's controversial liver transplant, for example--followed by careful analysis of its

surrounding ethical questions (the charges that Mantle received special treatment because he was a celebrity, the larger problems involving how organs are allocated, and whether alcoholics should have an equal claim on donor livers). In approaching transplant ethics through specific cases, Munson reminds us of the complex personal and emotional dimension that underlies such issues. The book also ranges beyond our present capabilities to explore the future possibilities in xenotransplantation (transplanting animal organs into humans) and stem cell technology that would allow doctors to grow new organs from the patient's own cells. Based on extensive scientific research, but written with a novelist's eye for the human condition, *Raising the Dead* shows readers the reality of organ transplantation now, the possibility of what it may become, and how we might respond to the ethical challenges it forces us to confront.
