In writing this book, the objective is to devise a beneficial point of reference, one that is conducive to enlightening individuals within the healthcare profession and the wider context, on the art of reflection and acknowledging its benefits in terms of exploring their feelings and understanding their meaning. Reflection is a highly beneficial tool. In this context, the process enables the author to reflect constructively on her nursing career and practice, to highlight the positive as well as the negative aspects within that practice, and illustrate how the experiences gained have contributed to her development, personally and professionally, throughout that journey. Reflection includes deliberate reflection on experience, emotions, actions and responses and acknowledging how essential these have been to informing the author's existing knowledge base and in ensuring a higher level of learning and understanding. In the continued quest to deliver optimal healthcare, the objective of reflection is in enabling healthcare individuals e.g. nursing students, newly qualified nurses or those considering change of nursing speciality, to better understand their patients from a holistic standpoint (physical, psychological, psycho-social, spiritual, cultural and economic) and ultimately, improving the individual patient's overall experience – cancer or otherwise, as well as improving and enhancing practice outcomes. The importance of reflection and its contribution to increasing the healthcare professional's self-awareness – emotional, personal and professional, is also well underlined. Various Modules and Case Studies within the book are used to explain and highlight key issues, and to enhance content and visual acuity.

breaking bad 5th season: The Status of the Family in Law and Bioethics Roy Gilbar, 2017-11-28 Where do a doctor's responsibilities lie in communicating diagnostic and predictive genetic information to a patient's family members? On the one hand, a patient may wish to retain confidentiality while the relatives seek information; on the other, a patient may wish to share the information while the relatives would rather not know. This volume investigates the doctor's professional legal and ethical obligations in the context of these two familial tensions. The examination is conducted within the liberal-communitarian debate, whereby the two philosophies hold different perceptions of the individual and the relationship he or she has with others. Within this theoretical framework, the book examines the approach taken by English medical law and ethics to the communication of genetic information to family members. Legally, the focus is on tort law and the law of confidentiality. Ethically, it concentrates on the approach taken by the bioethical literature, and more specifically by codes of ethics and professional guidelines.
