

# fun facts of moon

**fun facts of moon** are numerous and fascinating, captivating the imagination of scientists, astronomers, and stargazers alike. The Moon, Earth's only natural satellite, has been a source of mystery, inspiration, and scientific inquiry for centuries. From its unique geological features to its influence on life on Earth, the Moon continues to intrigue us with its many secrets. In this comprehensive article, we will explore some of the most interesting and lesser-known fun facts about the Moon, providing insights into its formation, characteristics, cultural significance, and more. Whether you're a space enthusiast or simply curious about our celestial neighbor, these fun facts will deepen your appreciation for the Moon and its remarkable role in our universe.

## Formation and Basic Facts About the Moon

### How Was the Moon Formed?

- The prevailing theory suggests that the Moon was formed approximately 4.5 billion years ago, shortly after Earth itself.
- The most widely accepted hypothesis is the Giant Impact Theory, which proposes that a Mars-sized body, often called Theia, collided with Earth.
- The debris from this collision eventually coalesced to form the Moon.
- This event explains why the Moon's composition is similar to Earth's outer layers.

### Physical Characteristics of the Moon

- Diameter: About 3,474 kilometers (2,159 miles), roughly 27% of Earth's diameter.
- Mass: Approximately  $7.34 \times 10^{22}$  kilograms, about 1/81 of Earth's mass.
- Surface Gravity: About 1.62 meters per second squared (roughly 16.5% of Earth's gravity).
- Orbital Period: The Moon completes one orbit around Earth approximately every 27.3 days.
- Phases: The lunar cycle includes new moon, waxing crescent, first quarter, waxing gibbous, full moon, waning gibbous, last quarter, and waning crescent.

## Unique Geological Features of the Moon

### Maria and Highlands

- The Moon's surface is divided into dark, flat plains called maria (Latin for "seas") and lighter, mountainous highlands.
- Maria are vast basaltic plains formed by ancient volcanic activity.
- Highlands are older, heavily cratered regions composed mainly of anorthosite rock.

## **Impact Craters**

- The Moon's surface is covered with impact craters, some dating back billions of years.
- Notable craters include:
- Tycho: Known for its prominent rays.
- Copernicus: A well-preserved crater with terraced walls.
- Clavius: One of the largest craters visible from Earth.

## **Lunar Rilles and Wrinkle Ridges**

- Rilles are channel-like structures formed by volcanic activity or tectonic processes.
- Wrinkle ridges are long, curved features resulting from the contraction of the lunar crust.

## **Fun Facts About the Moon's Surface and Environment**

### **Moonquakes**

- The Moon experiences seismic activity called moonquakes, caused by tidal stresses from Earth, thermal expansion, or meteorite impacts.
- Some moonquakes can last up to an hour and are significantly stronger than typical earthquakes.

### **Water on the Moon**

- Despite being extremely dry compared to Earth, the Moon harbors water ice in shadowed craters near the poles.
- NASA's Lunar Reconnaissance Orbiter confirmed water ice deposits, which are crucial for future lunar exploration and potential colonization.

### **Extreme Temperatures**

- The lunar surface faces temperature extremes:
- Daytime temperatures can soar up to 127°C (260°F).
- Nighttime temperatures can plummet to -173°C (-280°F).

### **Gravity and Its Effects**

- The Moon's gravity is about 1/6th of Earth's, leading to unique physical effects:
- Astronauts can perform high jumps.
- Long-term human presence would face challenges related to muscle and bone density loss.

# **Cultural and Historical Fun Facts**

## **The Moon in Mythology and Literature**

- The Moon has been a symbol of mystery, femininity, and change across cultures.
- In Greek mythology, Selene was the goddess of the Moon.
- In many cultures, the Moon is associated with deities, legends, and folklore.

## **The First Human Landing**

- On July 20, 1969, NASA's Apollo 11 mission achieved the first manned landing on the Moon.
- Neil Armstrong and Buzz Aldrin became the first and second humans to walk on the lunar surface.
- Neil Armstrong's famous words: "That's one small step for man, one giant leap for mankind."

## **Moon Missions and Discoveries**

- The Moon has been the focus of numerous missions, including:
- Lunar Orbiters, which mapped its surface.
- Rovers like Luna, Apollo Lunar Rovers, and China's Chang'e series.
- Recent missions aim to establish sustainable bases and explore lunar resources.

## **Fun Facts About Moon Phases and Eclipses**

### **How Phases Occur**

- The changing appearance of the Moon is due to its orbit around Earth, causing different portions to be illuminated by the Sun.
- The cycle lasts about 29.5 days, called a lunar month.

### **Eclipses**

- Lunar eclipses occur when Earth passes between the Sun and the Moon, casting a shadow.
- Solar eclipses happen when the Moon passes between Earth and the Sun, blocking sunlight.
- Total lunar eclipses can turn the Moon a reddish hue, often called a "Blood Moon."

# **Fun Facts About the Moon's Influence on Earth**

## **Tides**

- The gravitational pull of the Moon creates ocean tides.
- Tides influence marine life, coastal ecosystems, and even Earth's rotation.

## **Stabilizing Earth's Axis**

- The Moon's gravity stabilizes Earth's axial tilt, contributing to a relatively stable climate over millennia.

## **Biological Rhythms**

- Lunar cycles have historically influenced human and animal behavior, including mating patterns and migration.

## **Future of Moon Exploration and Fun Facts**

### **Upcoming Missions**

- NASA's Artemis program aims to return humans to the Moon by the mid-2020s.
- China and Russia are planning joint lunar missions.
- Private companies are exploring lunar mining and tourism.

### **Potential for Lunar Resources**

- The Moon contains valuable resources like helium-3, rare earth elements, and water ice.
- These could support future space exploration and even Earth's needs.

### **Building a Lunar Base**

- Scientists envision establishing permanent bases for scientific research, resource extraction, and as a stepping stone for missions to Mars.

## **Conclusion**

The Moon is much more than a bright object in our night sky; it is a complex, dynamic world filled with intriguing features and profound influences. From its geological marvels to its cultural significance, the Moon continues to inspire curiosity and scientific exploration. Understanding fun facts about the Moon not only enriches our knowledge of

this celestial neighbor but also highlights its vital role in Earth's environment and history. As technology advances and new missions are launched, the Moon promises to reveal even more secrets, making it an eternal source of wonder and discovery for generations to come.

## **Frequently Asked Questions**

### **Did you know the moon is slowly moving away from Earth?**

Yes, the moon is drifting approximately 3.8 centimeters (1.5 inches) away from Earth every year due to tidal interactions.

### **Is there water on the moon?**

Absolutely! Scientists have confirmed the presence of water ice in permanently shadowed craters near the lunar poles.

### **Why does the moon have moonquakes?**

Moonquakes are caused by tidal stresses from Earth's gravity, meteorite impacts, and the moon's internal geological activity.

### **Can humans grow plants on the moon?**

Experiments have shown that certain plants can grow in lunar soil and controlled environments, which is vital for future lunar colonization.

### **How long does it take for the moon to orbit Earth?**

The moon takes about 27.3 days to complete one orbit around Earth, which also corresponds to its lunar day length.

### **Is the moon's surface really made of cheese?**

No, that's just a fun myth! The moon's surface is made of rocky material and dust, not cheese.

## **Additional Resources**

[Fun Facts of Moon: An In-Depth Exploration of Earth's Celestial Companion](#)

The Moon has captivated human imagination for millennia, serving as a muse for poets, a navigational aid for sailors, and a focal point for scientific inquiry. Despite its prominence in our night sky, many intriguing facts about the Moon remain lesser-known or

misunderstood. In this comprehensive exploration, we delve into the fascinating aspects of Earth's only natural satellite, uncovering fun facts that illuminate its mysterious nature, its influence on our planet, and the ongoing human fascination with this celestial body.

## **The Origin of the Moon: A Cosmic Tale**

One of the most captivating facts about the Moon pertains to its origins. Scientific consensus supports the giant-impact hypothesis, suggesting that the Moon was formed approximately 4.5 billion years ago when a Mars-sized body, often called Theia, collided with the early Earth. The debris from this colossal impact eventually coalesced under gravity to form the Moon.

Fun Fact:

The Moon is thought to be made up of material from both Theia and Earth, meaning it shares a similar composition with Earth's outer layers.

## **The Giant-Impact Hypothesis: Unraveling the Origin**

- Collision Event: A Mars-sized object collided with the early Earth, ejecting vast amounts of debris into orbit.
- Accretion: Over millions of years, this debris coalesced due to gravitational attraction.
- Formation: The accumulated mass formed a satellite that eventually stabilized into the Moon we observe today.

This theory explains why the Moon's composition, especially its vast basaltic plains called maria, closely resembles Earth's mantle.

## **Moon's Physical Characteristics: A Closer Look**

Understanding the Moon's physical attributes reveals many fun facts about its structure, surface, and environment.

### **Size and Distance**

- Diameter: Approximately 3,474 km (about 27% of Earth's diameter).
- Distance from Earth: Averaging 384,400 km (about 238,855 miles), but this varies slightly due to the Moon's elliptical orbit.
- Orbital Period: It completes an orbit around Earth roughly every 27.3 days, leading to the cycle of lunar phases.

Fun Fact:

The Moon is the fifth largest satellite in the Solar System but is the largest relative to the size of its parent planet.

# Mass and Gravity

- Mass: About  $7.34 \times 10^{22}$  kilograms, roughly 1/81 of Earth's mass.
- Surface Gravity: Approximately  $1.62 \text{ m/s}^2$ , which is about 16.5% of Earth's gravity.

Implication:

This reduced gravity explains why astronauts could hop and perform high jumps during the Apollo missions—a fun and memorable aspect of lunar exploration.

## Surface Features

The Moon's surface is a tapestry of intriguing features:

- Maria (Lunar Seas): Large, dark basaltic plains formed from ancient volcanic activity.
- Highlands: Bright, heavily cratered regions comprising older crust.
- Craters: Over 300,000 visible craters created by asteroid and meteorite impacts.
- Rilles: Narrow, canyon-like structures, thought to be formed by ancient volcanic activity or tectonic processes.

Fun Fact:

The Moon's surface is incredibly cratered because it lacks an atmosphere to burn up incoming meteoroids, making it a natural record of solar system history.

## The Moon's Phases and Tidal Influence

The Moon's cycles of phases and its gravitational pull have profound effects on Earth.

### Phases of the Moon

Lunar phases are caused by the relative positions of the Earth, Moon, and Sun.

- New Moon: The Moon is between Earth and the Sun; the illuminated side faces away.
- Waxing Phases: Increasing visibility of the Moon's illuminated side.
- Full Moon: The entire face is visible; Earth is between the Sun and Moon.
- Waning Phases: Decreasing illuminated area.

The cycle completes approximately every 29.5 days, giving us the familiar lunar month.

### Tidal Forces

- The Moon's gravity pulls on Earth's oceans, creating high and low tides.
- The tidal bulge on Earth is what causes the regular rise and fall of sea levels.

Fun Fact:

Some coastal regions experience "spring tides," where the difference between high and low tide is exaggerated, occurring during full and new moons.

## **Moon's Impact on Earth and Human Culture**

The Moon's influence extends beyond physical interactions; it has profoundly shaped human culture, mythology, and scientific pursuits.

### **Biological and Environmental Effects**

- Lunar Influence on Nocturnal Behavior: Some studies suggest certain nocturnal animals synchronize their activities with lunar cycles.
- Sleep Patterns: Research indicates human sleep quality may be subtly affected by lunar phases, although findings are mixed.

Fun Fact:

The Moon stabilizes Earth's axial tilt, contributing to a relatively stable climate over geological timescales.

### **Cultural Significance and Exploration**

Throughout history, the Moon has been central to mythology, religion, and navigation.

- Mythology: Many cultures have stories of lunar deities and myths explaining its phases.
- Calendars: Lunar cycles formed the basis of many traditional calendars.
- Space Race: The Apollo Moon landings (1969-1972) marked a pinnacle in human exploration. Neil Armstrong's first step remains an iconic moment.

Fun Fact:

The Moon is the only extraterrestrial body humans have visited, with twelve astronauts walking on its surface.

## **Recent Discoveries and Future Missions**

Advancements in lunar science continue to uncover new fun facts, and upcoming missions promise to deepen our understanding.

### **Recent Discoveries**

- Water Ice: Confirmed presence of water ice in shadowed lunar craters, vital for future

colonization.

- Lunar Soil Composition: Variations in mineral content hint at complex geological history and potential resource utilization.

## **Future Missions and Goals**

- Artemis Program: NASA aims to return humans to the Moon by the mid-2020s, establishing sustainable presence.
- International Collaborations: Countries like China, India, and private companies plan lunar missions.
- Lunar Bases: Long-term habitats are envisioned, turning the Moon into a stepping stone for deeper space exploration.

Fun Fact:

Scientists are exploring the Moon's regolith (soil) for resources like helium-3, which could potentially be used for future nuclear fusion energy.

## **Fun Facts About the Moon to Impress and Inspire**

To wrap up, here are some quick, fun, and surprising facts about the Moon:

- The Moon is slowly drifting away from Earth at about 3.8 centimeters (1.5 inches) per year.
- A lunar day (sunrise to sunset) lasts about 29.5 Earth days.
- The Moon has no atmosphere, which explains the stark temperature differences—ranging from boiling hot during the day to freezing cold at night.
- The side of the Moon facing Earth always shows the same features—a phenomenon known as synchronous rotation or tidal locking.
- The Moon has "moonquakes," similar to earthquakes, caused by tidal stresses and thermal expansion.

## **Conclusion: The Ever-Enigmatic Satellite**

The Moon remains one of the most intriguing celestial bodies in our Solar System. Its origin stories, physical features, influence on Earth, and cultural significance combine to make it a source of endless fascination. As technology advances, humanity's understanding of the Moon continues to grow, promising new discoveries and perhaps even a permanent human presence beyond Earth.

Whether viewed through a telescope, studied in laboratories, or explored during space missions, the Moon's fun facts never cease to inspire curiosity and wonder. It is a testament to the enduring human spirit of exploration and the timeless allure of our closest cosmic neighbor.

## **Fun Facts Of Moon**

**fun facts of moon: 20 Fun Facts About the Moon** Ryan Nagelhout, 2014-08-01 The moon has fascinated people for centuries, as demonstrated by the numerous myths and stories told about it. Although no one has visited the moon since the early 1970s, scientists are still very interested in learning more about it. This volume takes readers on an exciting trip to our only natural satellite. The text is aligned with science curricula and features numerous engaging facts. Stunning images of the moon, as well as detailed diagrams, are sure to amaze readers.

**fun facts of moon: 14 Fun Facts About Pluto** Jeannie Meekins, Pluto was once considered to be the smallest planet in our galaxy. As more was discovered about the other planets, and about other objects in our galaxy, Pluto fell into debate, but many people still like to consider it a planet. How much do you really know about Pluto? Why do scientists say Pluto was “discovered by mistake”? Who discovered Pluto? How big is Pluto compared to the United States? Is Pluto’s orbit outside or inside the orbit of Neptune? How many Pluto days are there in a Pluto year? Does it snow on Pluto? Find out in this book, and surprise and amaze your friends with these fun facts about Pluto. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About Black Holes** Jeannie Meekins, TV and movies will have you believing that black holes are huge holes in space and anything that falls into them is lost for all time – possibly falling into another universe or another time, or even falling forever. You may think that black holes run around in space like huge vacuum cleaners sucking up everything in their path. This is not true. But what actually is a black hole and what do they do? This book will help you find out. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About Eyes** Jeannie Meekins, Our eyes are round objects that sit at the halfway point of our head. They are about one inch (25 mm) in diameter and come in a variety of colors. They allow us to see all the wonders of the world and beyond. We still don’t understand exactly how they work in transforming light into color and objects, but they do, and it’s amazing. Let’s see how much you know about eyes. Can you answer these questions? How many layers do your eyes have? How many colors can your eyes see? Who blinks more, adults or infants? Can light that we cannot see hurt our eyes? What is the difference between a mirage and a hallucination? Find out more about your eyes and amaze your family and friends with these fun facts. Ages 8 and up. All measurements in American and metric. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About Yosemite** Jeannie Meekins, For millions of years, volcanic activity beneath the Earth’s crust has been turning rocks into granite. The rocks were uplifted, forming a small mountain range with small streams and creeks weaving their way through the valleys. Surface volcanoes erupted, covering the area in lava. The streams cut new paths. The land was again uplifted; streams and erosion cut canyons. Then the Earth cooled and froze. Glaciers filled the valleys, running down the rivers and cutting the canyons into wide valleys. As the Ice Age retreated, the Sierra Nevada mountain range and Yosemite were left uncovered. So how much do you know about this fantastic place? Can you answer these questions? What was the longest glacier in Yosemite? Are there any glaciers in Yosemite today? How many meadows does Yosemite have?

What plant is among the largest and oldest living things on earth? What is frazil ice? Find out more about Yellowstone, the world's first National Park, and amaze your family and friends with these fun facts. All measurements in American and metric. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About Neptune** Jeannie Meekins, Does Neptune have a lot of winds? What is at the core or center of Neptune? Neptune is slowly turning itself into what precious mineral? What is the coldest place in our solar system? (Hint: It isn't the planet,) Learn the answer to these questions and many more fun facts in this 15-Minute Book. Neptune is the last planet in our solar system. It is so far away that scientists do not know much about it, but here are some things they do know. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About the Kuiper Belt and Oort Cloud** Jeannie Meekins, It was once thought that our solar system ended at Saturn. Then the first telescopes revealed Uranus and Neptune. Differences in the calculations of the gravity of these giants set off another search and Pluto was discovered. Pluto was then thought to be the last planet of our solar system. Beyond it was empty space - until astronomers started looking at comets. Huge balls of ice, zipping through the solar system, past the planets, around the sun and back out again. Where did they come from? Where did they go? And what made them come back? That's when scientists discovered the Kuiper Belt and the Oort Cloud. Read this book and find out: How many types of comets are there? What formed the Kuiper Belt? How big is the Kuiper Belt? What is the Oort Cloud? How big is the Oort Cloud? How long does it take sunlight to reach the Oort Cloud? Find out the answers to these questions and more and amaze your family and friends with these fun facts. Ages 8 and up. All measurements in American and metric. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About Mars** Jeannie Meekins, A day on Mars is almost as long as a day on Earth, but how long is a year on Mars? Does Mars have seasons? What color are the rocks on Mars? Mars is full of volcanoes, but when did the last one erupt? Learn the answer to these questions and many more fun facts in this 15-Minute Book. In the Milky Way Galaxy, there is a yellow sun that has eight planets. Four of the planets are rock worlds. The other four are gas and ice. The closest planet to the sun is Mercury. It's too hot for anything to live there. The second is Venus. Its atmosphere is deadly. The third is Earth. It has oceans and land. It has trees and animals, and humans. The fourth planet, and last of the rock worlds, is Mars - the red planet. How much do you know about this fascinating place? LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 101 Fun Facts About the Solar System** Jeannie Meekins, You may think the Solar System consists of the sun and the eight planets that orbit around it. However, there are other things out there. There are comets, moons, asteroids, meteors, dust, ice, rock and much more. Plus there is a whole lot of man made junk. Do you know the answers to these questions about the Solar System? Where is The Main Asteroid Belt? Are all the dwarf planets out beyond Pluto? What is Ison? What formed the Kuiper Belt? Why do scientists say Pluto was "discovered by mistake"? Which planet had the potential to become a star? This book is a set of seven 14 Fun Facts books, plus

additional facts. The books are: *14 Fun Facts About the Solar System* *14 Fun Facts About the Sun* *14 Fun Facts About Pluto* *14 Fun Facts About Comets* *14 Fun Facts About Dwarf Planets* *14 Fun Facts About Asteroids* *14 Fun Facts About the Kuiper Belt and the Oort Cloud* Learn about our solar system with these books of fun facts. Ages 9 and up. Measurements in both American and Metric. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: *14 Fun Facts About Ears*** Jeannie Meekins, Ears sit on opposite sides of our head. They are flappy bits of skin that stick out. Sometimes we decorate them with piercings. Ears are our own little satellite dishes. They pick up sound waves and send them through the ear canal, where the tiniest bones and muscles in our body pick up the vibrations and send them further into our ears. Through a journey of air and liquid, our brains finally get the message and tell us that we have heard something. Our ears are also responsible for making sure we don't fall flat on our face. Let's see how much you know about ears. Can you answer these questions? How many parts does your ear have? How many types of fluid are supposed to be in your ear? Who can hear better, babies or adults? Can you hear with your bones? What does ear wax do? Find out more about your ears and amaze your family and friends with these fun facts. Ages 8 and up. All measurements in American and metric. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: *14 Fun Facts About Uranus*** Jeannie Meekins, What did scientists first think Uranus was? What are the names of Uranus' moons named after? Is Uranus bigger or smaller than Earth? What is strange about the way Uranus spins? Learn the answer to these questions and many more fun facts in this 15-Minute Book. In the middle of the galaxy is Uranus, one of the four gas planets in the Solar System. Here are some fun facts about Uranus. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: *14 Fun Facts About Earth*** Jeannie Meekins, How old is Earth? How fast does Earth spin? What is happening to Mount Everest, the highest place on Earth? What is the lowest place on Earth? Learn the answer to these questions and many more fun facts in this 15-Minute Book. Earth is the only planet in the universe that has life. It orbits an ordinary star in the outer edge of The Milky Way Galaxy. It is a small rocky planet, third in line from its sun. Seventy percent of it is covered by water. It is our home. But how much do you really know about it? LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: *14 Fun Facts About the Space Shuttle*** Jeannie Meekins, What is a Space Shuttle? How can something that can't fly go into space? Do spiders spin webs in space? Do astronauts get space sick? This book answers all these questions and more, plus everybody's favorite: How do astronauts go to the toilet? This book was written in 2007, prior to the end of the space shuttle program in 2011. While the Space Shuttle program no longer exists, the information in this book is still interesting for learning about the program that provided us with much information about space and about space travel in general. Ages 8 and up. All measurements in American and metric. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About Neptune: A 15-Minute Book** Jeannie Meekins, Does Neptune have a lot of winds? What is at the core or center of Neptune? Neptune is slowly turning itself into what precious mineral? What is the coldest place in our solar system? (Hint: It isn't the planet,) Learn the answer to these questions and many more fun facts in this 15-Minute Book. Neptune is the last planet in our solar system. It is so far away that scientists do not know much about it, but here are some things they do know. The Educational Version has activities that meet Common Core Curriculum Standards. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About Earth: A 15-Minute Book** Jeannie Meekins, How old is Earth? How fast does Earth spin? What is happening to Mount Everest, the highest place on Earth? What is the lowest place on Earth? Learn the answer to these questions and many more fun facts in this 15-Minute Book. Earth is the only planet in the universe that has life. It orbits an ordinary star in the outer edge of The Milky Way Galaxy. It is a small rocky planet, third in line from its sun. Seventy percent of it is covered by water. It is our home. But how much do you really know about it? The Educational Version has activities that meet Common Core Curriculum Standards. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About Mercury** Jeannie Meekins, When was Mercury discovered? Does Mercury have a magnetic field? How big is Mercury's atmosphere? Was Mercury bigger in the past? Learn the answer to these questions and many more fun facts in this 15-Minute Book. The closest planet to the sun is Mercury – a tiny, hot, lifeless ball of rock that races around the sun in less than three months. What could possibly fascinate us about that? Read on and find out. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: 14 Fun Facts About Dwarf Planets** Jeannie Meekins, More space objects have been found beyond Pluto, in a region known as the Kuiper Belt. In 2003, Eris was discovered. Its existence was confirmed in January 2005. It was found to be larger than Pluto and was put forward as a tenth planet in our solar system. This caused much debate among astronomers. Are there more, larger objects in our solar system? How many? Are they all to be considered planets? If not, then what does this mean for Pluto? On August 24, 2006, the International Astronomical Union (IAU) came up with a scientific definition of the word "planet". Pluto did not fit these new rules. It was downgraded to "dwarf planet". The IAU is reluctant to consider any more than eight planets in our solar system. All other planet-like bodies are to be known as "dwarf planets". How much do you know about these dwarf planets? Do you know: What is a plutoid? How many official dwarf planets are there in our solar system? Are all the dwarf planets out beyond Pluto? How big does an object need to be to qualify as a dwarf planet? What other rules must an object meet to be classified as a dwarf planet? Find out the answers to these questions and more and amaze your family and friends with these fun facts. Ages 8 and up. All measurements in American and metric. LearningIsland.com believes in the value of children practicing reading for 15 minutes every day. Our 15-Minute Books give children lots of fun, exciting choices to read, from classic stories, to mysteries, to books of knowledge. Many books are appropriate for hi-lo readers. Open the world of reading to a child by having them read for 15 minutes a day.

**fun facts of moon: Mysteries of the Moon** Rebecca E. Hirsch, 2020-08-01 There are many mysteries surrounding the moon. Where did it come from? And what could be hiding on its dark

side? Take a look at the research scientists are doing to learn about the Earth's moon.
