the man who captured sunshine: Rings of Fire Larry J. Hughes, 2024-06-18 "An epic story, filled with an unfolding array of evocatively described landscapes and sharply drawn, unforgettable people." —Dayton Duncan, writer and producer for Ken Burns documentary films and author of fourteen books on American history and national parks Edwin Land had barely settled into his seat on the plane when the flash went off. An idea for an innovative WWII technology that might help eradicate the fascist cancer devouring the free world. It was Polaroid's Optical Ring Sight, which magically projected a bullseye of brilliantly colored rings onto the sky—like rings of fire—to aim American anti-aircraft guns that previously "couldn't hit the broad side of a barn." Rings of Fire is the compelling story of American ingenuity, determination, and grit—told through the personal stories of the amazing people who transformed insight into gunsight. From scientists to ordinary Americans to drifters and ex-cons characterized as "the underbelly of America," they crossed cultural barriers to tackle a shared crisis: California "desert rat" artist, John Hilton, whose mining claim supplied the calcite crystals desperately needed for the device, assisted by Gen. George S. Patton. Miners Steve Modesto and John Owens, a Cahuilla Indian ranch hand and a white meat-cutter from Kansas, whose friendship led to an astonishing discovery. Moonshiner Al Hansen, whose calcite prospecting in Montana started with a lucky strike but cascaded into a wild-west vigilante showdown. "Crystal Crackin' Mama" Irene Frederick, whose calcite-crystal processing skills silenced male skeptics and helped rescue the Polaroid project from disaster. Edwin Stanton, whose hubris led to a fat FBI dossier and tragedy while prospecting in Mexico. Cecil Kegans, a rough Oklahoman with a huge smile, starting his Marine career by fetching groceries for calcite miners and ending it in a bloody pool on Saipan. And miner Harry Sikkenga, whose fist fight with a shift boss packed him off to the army artillery, just in time to invade Germany and encounter the horror of Dachau. Teamed together, they overcame enormous personal obstacles to produce ring sights for Navy ships, aircraft, and Army bazookas. And afterwards, their product went from aiming

the guns of war to the cameras of peacetime—for television and on the helmets of skydiving videographers. And then, all the way to the moon, aiming NASA's space cameras, culminating with perhaps the most influential photograph of all time, Earthrise. Larry Hughes unfolds this gripping, never-told story with accessible explanations of the science and the art behind the project, but always lets the colorful characters drive a warm and vivid adventure.

the man who captured sunshine: Sun, Sea and Murder Roderic Jeffries, 2012-07-01 An Inspector Alvarez Mystery - Rich and arrogant, when Tyler's love of good wine leads to the deaths of a young couple in a country lane in Kent, he drives his car to his extensive property in Mallorca so the English police can't examine it. When laid-back Mallorcan Inspector Alvarez is ordered to investigate whether Tyler is in the area, he's reluctant, to say the least. the man who captured sunshine: Chemistry and Biology of Winemaking Ian S Hornsey, 2015-10-09 Someone once said that 'wine is a mixture of chemistry, biology and psychology'. It has certainly fascinated people over the centuries and without a doubt been enjoyed by many. Indeed, from its serendipitous roots as an attempt to store fruit, wine has been woven into the fabric of society; from its use in religion to today's sophisticated products sampled over a meal. The Chemistry and Biology of Winemaking not only discusses the science of winemaking but also aims to provide the reader with a wider appreciation of the impact of oenology on human society. Beginning with a history of wine the book discusses a wide range of topics, with particular emphasis on the organisms involved. Starting with the role of yeast in fermentation, it goes on to discuss so-called 'killer yeasts', lactic acid bacteria and the role that genetically modified organisms may have in the future. This book is ideal for anyone interested in the process of winemaking and will be of particular use for those with an interest in the chemical and biological sciences.

the man who captured sunshine: Saint of the Wilderness Jess Carr, 2018-05-15 This biography of Robert Sayers Sheffey weaves the story of a unique-in the true meaning of the word-man, the details of whose life entitle him to the mythical position he holds even today among the people of a part of the South, where, so many years ago, he traveled the circuits of Virginia, West Virginia, and into the fringes of other states as an itinerant preacher. Born in 1820, raised in Virginia, and having spent a part of his early youth in the home of a wealthy Presbyterian uncle and aunt, there was little in his early background to explain Robert Sheffey's call to the Methodist ministry, his unusual conversion, and, against all odds, the eventual acceptance of his unorthodoxy by the hierarchy of his adopted church, and, ultimately, the adoration of an army of followers who came to believe him to be a Divine. Here are documented his extraordinary gifts of exhortation, the depths of his caring about every single soul in the widespread territory he rode-on a brutally rigorous, self-imposed schedule-as well as the unexplainable psyche and prophetic talents that truly earned him the title Saint of the Wilderness. Mr. Carr's book tells, in detail, of this physically frail, yet incredibly strong man (whose life spanned eighty-two years) and the demons with which he had to wrestle, his personal deprivations and sorrows and triumphs, the beauty of his love for all living things, and the unshakability of his faith and prayer petitions. The Saint of the Wilderness is the authentic, thoroughly researched life of a figure still revered, still talked about throughout the South, and not rarely, in other parts of the world. But such a life example knows no bounds: such love and faith is universal in its appeal to the whole of mankind.

the man who captured sunshine: Life Without Elgar Ann Merivale, 2014-10-31 During a

regression to find out the reason for the unusual emotional attachment that she'd had since the age of sixteen to Sir Edward Elgar - both his music and the man himself - Ann Merivale was knocked for six at finding herself in the life of Helen Weaver, his first fiancée. One year on, following a meeting held at Plas Gwyn, in the very room that had been Elgar's study from 1904-11, a series of letters between Edward Elgar and Helen Weaver started writing themselves in her head. Gradually, and on the advice of colleagues, she decided that this 'imaginary correspondence' should form the middle section of a book devoted to her personal experiences. The first part is autobiographical, showing how she came to her present beliefs and the third part (also somewhat autobiographical) draws conclusions re healing. It has the dual aim of introducing spiritual subjects to musical people who are unfamiliar with them, and introducing Elgar to spiritually minded people who know little or nothing about him.

The Empire spans the known world. No power is greater, and nothing can threaten the peace it brings. And no one must know of the horrors that haunt it. Aemilius thought he would die heroically in battle like his forefathers, mourned by a loving wife and many children, but he's barely a man when a harpy flies down out of the old myths and knocks him from his horse. Stunned and helpless, he waits for his end... and is saved. Formed on the bloody battlefield of Teutoburg, the Hidden Legion are an order of soldiers, magicians, and rogues so secret that the Empire itself would hunt them down if they were exposed. And now Aemilius is one of them. A darkness is growing across the Empire, and someone is setting traps for the Legion themselves. Aemilius and his new comrades set off on the hunt for an unknown enemy...
