world of time clocks: The Closed World Paul N. Edwards, 1996 The Closed World offers a radically new alternative to the canonical histories of computers and cognitive science. Arguing that we can make sense of computers as tools only when we simultaneously grasp their roles as metaphors and political icons, Paul Edwards shows how Cold War social and cultural contexts shaped emerging computer technology--and were transformed, in turn, by information machines. The Closed World explores three apparently disparate histories--the history of American global power, the history of computing machines, and the history of subjectivity in science and culture--through the lens of the American political imagination. In the process, it reveals intimate links between the military projects of the Cold War, the evolution of digital computers, and the origins of cybernetics, cognitive psychology, and artificial intelligence. Edwards begins by describing the emergence of a closed-world discourse of global surveillance and control through high-technology military power. The Cold War political goal of containment led to the SAGE continental air defense system, Rand Corporation studies of nuclear strategy, and the advanced technologies of the Vietnam War. These and other centralized, computerized military command and control projects--for containing world-scale conflicts--helped closed-world discourse dominate Cold War political decisions. Their apotheosis was the Reagan-era plan for a Star Wars space-based ballistic missile defense. Edwards then shows how these military projects helped computers become axial metaphors in psychological theory. Analyzing the Macy Conferences on cybernetics, the Harvard Psycho-Acoustic Laboratory, and the early history of artificial intelligence, he describes the formation of a cyborg discourse. By constructing both human minds and artificial intelligences as information machines, cyborg discourse assisted in integrating people into the hyper-complex technological systems of the closed world. Finally, Edwards explores the cyborg as political identity in science fiction--from the disembodied, panoptic AI of 2001: A Space Odyssey, to the mechanical robots of Star Wars and the engineered biological androids of Blade Runner--where Information Age culture and subjectivity were both reflected and constructed. world of time clocks: The World of Swope E. J. Kahn Jr., 2023-04-25 Herbert Bayard Swope (1882-1958) was a reporter, foreign correspondent and newspaper editor: he spent most of his career at the New York World and was the first and three-time recipient of the Pulitzer Prize for Reporting. He knew virtually everyone, gangsters, socialites, ward politicians and American Presidents. Wherever he went he dominated the gathering by virtue of his height, his flaming red hair, his seemingly inexhaustible fund of information on all subjects and his unabashed enthusiasm for taking center stage. After leaving journalism in the late 1920s, Swope was at various times, and often simultaneously, a force in the Democratic party, adviser to politicians, financiers and industrialists, New York State Racing Commissioner, consultant to a Secretary of War, a founder and director of Freedom House, and confidant of Al Smith, Bernard Baruch and Franklin Delano Roosevelt. He also gambled enthusiastically and for breathtaking stakes, and entertained lavishly. "[A] merciless exposure as well as a celebration of [Swope's] career. Mr. Kahn has brought to his work the intelligence, polish and sophistication which have distinguished his 10 previous books and his New Yorker pieces... Mr. Kahn tells us more about Herbert Bayard Swope than we care to

know... What saves this excellent biography, however, is that in digging up, sorting and assembling so impressive an array of material, Mr. Kahn has also given us an engaging, fascinating picture of only yesterday in New York." — John Tebbel, *The New York Times* "Kahn's biography is perceptive as opposed to intimate, reflective instead of psychoanalytic... A thorough enough subtle, and well-written book." — Kirkus

Byrne, 2017-06-22 Students of the Italian Renaissance who wish to go beyond the standard names and subjects will find in this text abundant information on the lives, customs, beliefs, and practices of those who lived during this exciting time period. *The World of Renaissance Italy: A Daily Life Encyclopedia* engages all of the Italian peninsula from the Black Death (1347-1352) to 1600. Unlike other encyclopedic works about the Renaissance era, this book deals exclusively with Italy, revealing the ways common Italian people lived and experienced the events and technological developments that marked the Renaissance era. The coverage specifically spotlights marginal or traditionally marginalized groups, including women, homosexuals, Jews, the elderly, and foreign communities in Italian cities. The entries in this two-volume set are organized into 10 sections of 25 alphabetically listed entries each. Among the broad sections are art, fashion, family and gender, food and drink, housing and community, politics, recreation and social customs, and war. The See Also sources for each article are listed by section for easy reference, a feature that students and researchers will greatly appreciate. The extensive collection of contemporary documents include selections from a diary, letters, a travel journal, a merchant's inventory, Inquisition testimony, a metallurgical handbook, and text by an artist that describes what the author feels constitutes great work. Each of the primary source documents accompanies a specific article and provides an added dimension and degree of insight to the material.

world of time clocks: *Cave Art (World of Art)* Bruno David, 2017-02-28 An archaeological exploration of the mysterious world of cave art through the ages Deep underground, some of humanity's earliest artistic endeavors have lain untouched for millennia. The dark interiors of caves, wherever they may be found, seem to have had a powerful draw for ancient peoples, who littered the cave floors with objects they had made. Later, they adorned cave walls with sacred symbols and secret knowledge, from the very first abstract symbols and handprints to complex and vivid arrangements of animals and people. Often undisturbed for many tens of thousands of years, these were among the first visual symbols that humans shared with each other, though they were made so long ago that we have entirely forgotten their meaning. However, as archaeologist Bruno David

reveals, caves decorated more recently may help us to unlock their secrets. David tells the story of this mysterious world of decorated caves, from the oldest known painting tools to the magnificent murals of the European Ice Age. Showcasing the most astounding discoveries made in more than 150 years of archaeological exploration, Cave Art explores the creative achievements of our remotest ancestors and what they tell us about the human past.

world of time clocks: A Social History of Disability in the Middle Ages Irina Metzler, 2013

What was it like to be disabled in the Middle Ages? How did people become disabled? Did welfare support exist? This book discusses social and cultural factors affecting the lives of medieval crippled, deaf, mute and blind people, those nowadays collectively called disabled. Although the word did not exist then, many of the experiences disabled people might have today can already be traced back to medieval social institutions and cultural attitudes. This volume informs our knowledge of the topic by investigating the impact medieval laws had on the social position of disabled people, and conversely, how people might become disabled through judicial actions; ideas of work and how work could both cause disability through industrial accidents but also provide continued ability to earn a living through occupational support networks; the disabling effects of old age and associated physical deteriorations; and the changing nature of attitudes towards welfare provision for the disabled and the ambivalent role of medieval institutions and charity in the support and care of disabled people.
