campbell biology 14th edition: Evolution and the Emergent Self Raymond L. Neubauer, 2012
This book examines how humans evolved from the cosmos and prebiotic earth and what types of biological, chemical, and physical sciences drove this complex process. The author presents his view of nature which attributes the rising complexity of life to the continual increasing of information content, first in genes and then in brains.

campbell biology 14th edition: Quakers, Ecology, and the Light Cherice Bock, Christy Randazzo, 2023-05-25
As the community of life on this planet experiences the anthropogenic climate crisis, what tools from faith traditions can help us meet the coming challenges? By expanding the metaphor of light within the Christian and Quaker traditions to include light's role in ecosystems, this project develops an ecotheology of light that aims to answer this question. Cherice Bock and Christy Randazzo draw on their contexts in the Religious Society of Friends, placing the Quaker Inward Light in dialogue with the Bible, and light in Eastern Orthodox, ecological, and interdependence theologies. The Quaker ecotheology of light developed argues that Light is a vitally important and mutually translatable metaphor providing a common language that can aid humanity, reinterpreting traditions to meet this moment with spiritual grounding to transition to a just and sustainable future for the Earth, our common home. Bock and Randazzo connect this ecotheology of light with implications for Friends testimonies.

With compelling contributions from scholars and activists, politicians and theologians, *Gonna Trouble the Water* de-centers the concept of water as a commodity in order to center the dignity of water and its life-giving character. Firmly grounded at the intersection of environmentalism and racism, *Gonna Trouble the Water* makes clear the message: to deny water is to deny life. With compelling contributions from scholars and activists, politicians and theologians—including former Colorado governor Bill Ritter, global academic law professor Ved P. Nanda, Detroit-based activist Michelle Andrea Martinez, and many more—*Gonna Trouble the Water* de-centers the concept of water as a commodity in order to center the dignity of water and its life-giving character.

campbell biology 14th edition: The Nature of the Sexes Tomás Bogardus, 2025-09-15
How complex is sex? According to this book, not nearly as complex as we're often told these days. Author Tomás Bogardus first critically evaluates varieties of a complex view of sex—supported by Anne Fausto-Sterling, Sarah Richardson, and others—in which sex is a constellation of traits related to chromosomes, hormones, gonads, and phenotypes. Bogardus then considers several gamete-based accounts of sex, to which he is more sympathetic, including those from Alex Byrne, Laura Franklin-Hall, and Paul Griffiths. Shortcomings of these views are described, and an improved account is proposed: the sexes are activated higher-order functions. In short, to be male is to have the function of producing sperm, and to be female is to have the function of producing eggs. Bogardus develops this view, all while untangling the various meanings and definitions of 'gender' and 'gender identity', and while examining whether all of them are ultimately defined in terms of the sexes. The author then defends his methodology of deferring to biologists when figuring out the nature of the sexes and concludes with practical questions about whether we should revise the meanings of our sex terms for the sake of social justice. He asks whether pronouns like 'he' and 'she' track biological sex, and whether they should continue to do so. *The Nature of the Sexes: Why Biology Matters* expands current philosophical debate on sex and gender, and is essential reading

for curious students and academics alike.
