Historical Significance Depicted in the Map

Medieval and Early Modern Era

Historically, Picardy's map highlights its importance as a buffer zone and battleground during medieval times. The proximity to the English Channel made it a strategic region during the Hundred Years' War, with notable sites like the Battle of Crécy (1346) located within its territory.

World Wars and Modern Conflicts

The map also underscores the region's role in the two World Wars:

- The Battle of the Somme (1916), one of the bloodiest battles in WWI, took place here.
- The region's layout reflects the shifting front lines and military fortifications, visible in the placement of trenches and memorial sites.

Architectural and Cultural Heritage

The detailed Picardy map reveals key medieval towns, Gothic cathedrals, and castles, such as the Amiens Cathedral—an UNESCO World Heritage site—and the Château de Coucy. These landmarks are integral to understanding the region's historical narrative.

Administrative Divisions and Modern Mapping

Departments and Communes

The current Picardy region was historically divided into three departments:

- Aisne (02)
- Somme (80)
- Oise (60)

Post-2016 territorial reforms merged Picardy with Nord-Pas-de-Calais to create the larger Hauts-de-France region. However, the traditional Picardy map remains a vital reference for local identity and heritage.

Within the map, each department is subdivided into communes, over 1,200 local municipalities, each with unique cultural and geographical characteristics. Key towns include Amiens, Beauvais, Saint-Quentin, and Laon.

Key Infrastructure and Transportation

Modern maps highlight major transportation arteries:

- Railways: Connecting Paris to northern cities.
- Motorways: A1, A26, and A29 facilitate regional mobility.

This infrastructure underscores Picardy's integration into national and European networks, influencing

its economic and logistical landscape.

picardy region france map: The Ciphers of the Monks David A. King, 2001 This is the first comprehensive study of an ingenious number-notation from the Middle Ages that was devised by monks and mainly used in monasteries. A simple notation for representing any number up to 99 by a single cipher, somehow related to an ancient Greek shorthand, first appeared in early-13th-century England, brought from Athens by an English monk. A second, more useful version, due to Cistercian monks, is first attested in the late 13th century in what is today the border country between Belgium and France: with this any number up to 9999 can be represented by a single cipher. The ciphers were used in scriptoria - for the foliation of manuscripts, for writing year-numbers, preparing indexes and concordances, numbering sermons and the like, and outside the scriptoria - for marking the scales on an astronomical instrument, writing year-numbers in astronomical tables, and for incising volumes on wine-barrels. Related notations were used in medieval and Renaissance shorthands and coded scripts. This richly-illustrated book surveys the medieval manuscripts and Renaissance books in which the ciphers occur, and takes a close look at an intriguing astrolabe from

14th-century Picardy marked with ciphers. With Indices. Mit Kings luzider Beschreibung und Bewertung der einzelnen Funde und ihrer Beziehungen wird zugleich die Forschungsgeschichte - die bis dato durch Widerspruechlichkeit und Diskontinuität geprägt ist - umfassend aufgearbeitet. picardy region france map: Biorefinery 2030 Pierre-Alain Schieb, Honorine Lescieux-Katir, Maryline Thénot, Barbara Clément-Larosière, 2015-07-12 This book investigates the functioning and ecosystems of biorefineries and assesses the potential of the industrial bioeconomy. The authors present a case study of the biorefinery at Bazancourt Pomacle, near Reims, France, as an outstanding illustration of the creation, work processes, financing, provision of environmental services, competitive benefits and future prospects of a bioeconomy. Analysing the case of Bazancourt Pomacle, the authors show the wide range of products produced by integrated biorefineries such as food, bioenergy, molecules for cosmetics and nutrients for agricultural use. They also analyse Bazancourt Pomacle as an open innovation platform, which encompasses several layers of R&D, including three department chairs from leading engineering and business schools in France. Illustrating a number of global success stories that started in Bazancourt Pomacle, the authors also investigate the provision of pilot- and demonstration plants as inescapable steps in the scaling-up process from the lab to industrial scale. The book provides a systematic overview of the lessons learned, as well as data on an industrial bioeconomy. Investors, decision-makers, public-policy shapers, analysts and scholars will learn about the history, actors, economics, industrial symbiosis, role of cooperatives, R&D and future prospects of a world-class biorefinery and bio-based cluster in Europe.

picardy region france map: The Routledge Handbook of the Political Economy of the Environment Éloi Laurent, Klara Zwickl, 2021-10-27 Featuring a stellar international cast list of leading and cutting-edge scholars, The Routledge Handbook of the Political Economy of the Environment presents the state of the art of the discipline that considers ecological issues and crises from a political economy perspective. This collective volume sheds new light on the effect of economic and power inequality on environmental dynamics and, conversely, on the economic and social impact of environmental dynamics. The chapters gathered in this handbook make four original contributions to the field of political economy of the environment. First, they revisit essential concepts and methods of environmental economics in the light of their political economy. Second, they introduce readers to recent theoretical and empirical advances in key issues of political economy of the environment with a special focus on the relationship between inequality and

environmental degradation, a nexus that has dramatically come into focus with the COVID crisis. Third, the authors of this handbook open the field to its critical global and regional dimensions: global issues, such as the environmental justice movement and inequality and climate change as well as regional issues such as agriculture systems, air pollution, natural resources appropriation and urban sustainability. Fourth and finally, the work shows how novel analysis can translate into new forms of public policy that require institutional reform and new policy tools. Ecosystems preservation, international climate negotiations and climate mitigation policies all have a strong distributional dimension that chapters point to. Pressing environmental policy such as carbon pricing and low-carbon and energy transitions entail numerous social issues that also need to be accounted for with new analytical and technological tools. This handbook will be an invaluable reference, research and teaching tool for anyone interested in political economy approaches to environmental issues and ecological crises.

Louisiana French is endangered all around the state, but in the lower Lafourche Basin the shift to English is accompanied by the equally rapid disappearance of the land on which its speakers live. *French on Shifting Ground* allows both scholars and the general public to get an overview of how rich and diverse the French language in Louisiana is, and serves as a key reminder that Louisiana serves as a

prime repository for Native and heritage languages, ranking among the strongest preservation regions in the southern and eastern US. Nathalie Dajko outlines the development of French in the region, highlighting the features that make it unique in the world and including the first published comparison of the way it is spoken by the local American Indian and Cajun populations. She then weaves together evidence from multiple lines of linguistic research, years of extensive participant observation, and personal narratives from the residents themselves to illustrate the ways in which language—in this case French—is as fundamental to the creation of place as is the physical landscape. It is a story at once scholarly and personal: the loss of the land and the concomitant loss of the language have implications for the academic community as well as for the people whose cultures—and identities—are literally at stake.
