francis e lester rose: **Visions of Loveliness** Judith M. Taylor, 2014-12-01 Gardeners of today take for granted the many varieties of geraniums, narcissi, marigolds, roses, and other beloved flowers for their gardens. Few give any thought at all to how this incredible abundance came to be or to the people who spent a good part of their lives creating it. These breeders once had prosperous businesses and were important figures in their communities but are only memories now. They also could be cranky and quirky. In the eighteenth and nineteenth centuries, new and exotic species were arriving in Europe and the United States from all over the world, and these plants often captured the imaginations of the unlikeliest of men, from aristocratic collectors to gruff gardeners who hardly thought of themselves as artists. But whatever their backgrounds, they all shared a quality of mind that led them to ask "What if?" and to use their imagination and skills to answer that question themselves. The newest rose from China was small and light pink, but what if it were larger and came in more colors? Lilac was very nice in its way, but what if its blossoms were double and frilly? While there are many books about plant collectors and explorers, there are none about plant breeders. Drawing from libraries, archives, and the recollections of family members, horticultural historian Judith M. Taylor traces the lives of prominent cultivators in the context of the scientific discoveries and changing tastes of their times. *Visions of Loveliness* is international in scope, profiling plant breeders from many countries—for example, China and the former East Germany—whose work may be unknown to the Anglophone reader. In addition to chronicling the lives of breeders, the author also includes chapters on the history behind the plants by genus, from shrubs and flowering trees to herbaceous plants.

francis e lester rose: Roses Down Under Dawn Eagle, 2013-10-31 The rose is undoubtedly the most popular garden flower in the world. When settlers came from the Northern Hemisphere to Australia and New Zealand they brought their treasured roses with them. Roses Down Under follows the way roses may have been introduced into both countries where they not indigenous. In each country enthusiastic gardeners and Rosarians such as Alister Clark and Ron Bell in Australia and Ken Nobbs and Sam McGredy in New Zealand were inspired to develop their own varieties. There is a chapter dealing with the complexities of hybridisation, going through the process step by step, so the reader can follow in their footsteps. Various rose breeders from both countries, both professional and amateur, are listed, together with numerous photographs of their significant varieties. These illustrate the differences, as well as the similarities, of roses produced in Australia and New Zealand since the days of the first settlers. The Victoria State Rose Garden at Werribee, outside Melbourne, has been chosen to represent the large number of rose gardens in Australia, with many photographs illustrating the diverse collection of roses growing there. In New Zealand, the Trevor Griffiths Rose Garden in Timaru was chosen because of the comprehensive nature of roses planted in that very interesting garden. The final chapter asks where roses will be in the future. Will varieties produced in each country be similar, or very different? One thing is sure. They will always be, for gardeners, the Queen of Flowers.

Travelling between his city-bound plot in Peckham and twenty acres of rolling hillside in Somerset, he celebrates the beautiful skeletons of the winter garden, the joyous passage into spring, the heady smell of summer's bud break and the flaring of colour in autumn. Pearson's irresistible enthusiasm and wealth of knowledge overflow in a book teeming with tips to inspire your own space, be it a city window box or country field. Bringing you a newfound appreciation of nature, both wild and tamed, reading *Natural Selection* is a deeply restorative experience.
