japan map in the world: The Japanese Buddhist World Map D. Max Moerman, 2021-12-31
 From the fourteenth through the nineteenth centuries Japanese monks created hundreds of maps to construct and locate their place in a Buddhist world. This expansively illustrated volume is the first to explore the largely unknown archive of Japanese Buddhist world maps and analyze their production, reproduction, and reception. In examining these fascinating sources of visual and material culture, author D. Max Moerman argues for an alternative history of Japanese Buddhism—one that compels us to recognize the role of the Buddhist geographic imaginary in a culture that encompassed multiple cartographic and cosmological world views. The contents and contexts of Japanese Buddhist world maps reveal the ambivalent and shifting position of Japan in the Buddhist world, its encounter and negotiation with foreign ideas and technologies, and the possibilities for a global history of Buddhism and science. Moerman's visual and intellectual history

traces the multiple trajectories of Japanese Buddhist world maps, beginning with the earliest extant Japanese map of the world: a painting by a fourteenth-century Japanese monk charting the cosmology and geography of India and Central Asia based on an account written by a seventh-century Chinese pilgrim-monk. He goes on to discuss the cartographic inclusion and marginal position of Japan, the culture of the copy and the power of replication in Japanese Buddhism, and the transcultural processes of engagement and response to new visions of the world produced by Iberian Christians, Chinese Buddhists, and the Japanese maritime trade. Later chapters explore the transformations in the media and messages of Buddhist cartography in the age of print culture and in intellectual debates during the eighteenth and nineteenth centuries over cosmology and epistemology and the polemics of Buddhist science. The Japanese Buddhist World Map offers a wholly innovative picture of Japanese Buddhism that acknowledges the possibility of multiple and heterogeneous modernities and alternative visions of Japan and the world.

japan map in the world: *Japan and the Pacific, 1540-1920* Matsuda Koichiro, 2017-05-15 This volume seeks to capture the rich array of images that define Japan's encounters with the Pacific Ocean. Contemporary Japanese most readily associate 'Pacific' with the devastating war that their country fought over a half century ago. The ensuing occupation realized a situation that this people had striven to avoid ever since the Portuguese first arrived in 1543 - their subjugation by a foreign power. But the Pacific Ocean also extended Japan's overseas contacts. From antiquity Japanese and their neighbours crossed it to trade ideas and products. From the mid-16th century it carried people from more distant lands, Europe and America, and thus expanded and diversified Japan's cultural and economic exchange networks. From the late 19th century it provided the highway to transport Japanese imperial expansion in Northeast Asia and later to encourage overseas migration into the Pacific and the Americas. The studies selected for inclusion in this volume, along with the introduction, explain how the Pacific Ocean thus nurtured images of both threat and opportunity to the island nation that it surrounds.

japan map in the world: *The History of the East Sea and the Sea of Japan* Jeongbo Shim, 2022-09-07 This monograph discusses the dispute in geographical naming of the sea between Korea and Japan, which has been a long-lasting issue in East Asia and beyond. The book covers the modern history of the dispute, reveals the origin of the names for the sea between Korea and Japan, and the historical change of the name on ancient maps of Korea, Japan, and the West, and tracks the naming trends of the East Sea in geography textbooks in the pre-modern and modern times. The book also contains suggestions for some tangible solutions for the issue. This book is a useful resource for students and scholars in the fields of political geography, historical geography, cartography, diplomatic history, international relations, politics, and other related disciplines. It also appeals to international experts in hydrographic organizations and the United Nations, and geography and history teachers. The book is also interesting for the general readers interested in the topic of geographical naming disputes.

japan map in the world: *Japanese Art - Transcultural Perspectives* Melanie Trede, Christine Guth, Mio Wakita, 2024-12-02 The transcultural approach to Japanese art history embraced by the contributors to this volume centers on the dynamic aesthetic, artistic, and conceptual negotiations across cultural, temporal, and spatial boundaries. It not only acknowledges material objects, people, and technologies as agents, but also intangible practices such as knowledge and concepts as vital agencies of interaction in transcultural processes. With its premise on connectivity, trans-territoriality, networks, and their transformative potential, this research destabilizes

categorical configurations such as “center vs. periphery” and “high vs. low,” calling into question the classical canon of Japanese art history.

japan map in the world: *The Sea and the Sacred in Japan* Fabio Rambelli, 2018-07-12 The Sea and the Sacred in Japan is the first book to focus on the role of the sea in Japanese religions. While many leading Shinto deities tend to be understood today as unrelated to the sea, and mountains are considered the privileged sites of sacredness, this book provides new ways to understand Japanese religious culture and history. Scholars from North America, Japan and Europe explore the sea and the sacred in relation to history, culture, politics, geography, worldviews and cosmology, space and borders, and ritual practices and doctrines. Examples include Japanese indigenous conceptualizations of the sea from the Middle Ages to the 20th century; ancient sea myths and rituals; sea deities and sea cults; the role of the sea in Buddhist cosmology; and the international dimension of Japanese Buddhism and its maritime imaginary.

japan map in the world: *Alternative Narratives in Modern Japanese History* M. William Steele, 2003-09-02 How did ordinary people experience Japan's modern transformation? What role did people in local areas play in the making of modern Japan? How do studies of local politics help explain national events? The dominant account of modern Japanese history focuses on the nation-building that brought Japan into the modern world. After centuries of isolation, American warships forced Japan to open its doors to the West and a group of tough new leaders transformed the country into one of the great military and economic powers of the world. But different perspectives need to be examined. *Alternative Narratives* introduces other actors, other places and other dimensions of social and political activity in an attempt to construct a broader and more complex account of modern Japanese history. Focusing on the initial years of Japan's modern transformation, from the 1850s to the 1890s, Steele explores responses of commoners to the arrival of American warships in 1853; the growth of popular political consciousness; reactions of the residents of Edo in 1868 on the deposition of the shogun; responses of the village elite to the fall of the old regime; and established frameworks of historical narration - including American attempts to understand Japan's 1868 civil war. The author draws upon a wealth of documents, including broadsheets, woodblock prints, political cartoons and local campaign literature, as well as more conventional material in an endeavour to find new and different ways to examine the past. This book forms an important resource to students of Japanese history and culture while simultaneously appealing to scholars interested in the general problem of history and history-writing.

japan map in the world: *Mooring the Global Archive* Martin Dusinberre, 2023-10-05 Martin Dusinberre follows the Yamashiro-maru steamship across Asian and Pacific waters in an innovative history of Japan's engagement with the outside world in the late-nineteenth century. His compelling in-depth analysis reconstructs the lives of some of the thousands of male and female migrants who left Japan for work in Hawai'i, Southeast Asia and Australia. These stories bring together transpacific historiographies of settler colonialism, labour history and resource extraction in new ways. Drawing on an unconventional and deeply material archive, from gravestones to government files, paintings to song, and from digitized records to the very earth itself, Dusinberre addresses key questions of method and authorial positionality in the writing of global history. This engaging investigation into archival practice asks, what is the global archive, where is it cited, and who are 'we' as we cite it? This title is also available as Open Access.

japan map in the world: *World Development Report 2009* World Bank, 2008-11-04 Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion

people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.
